Why
this topic?

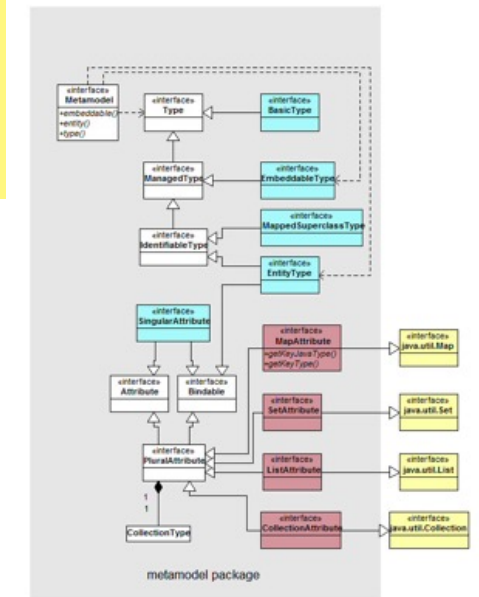

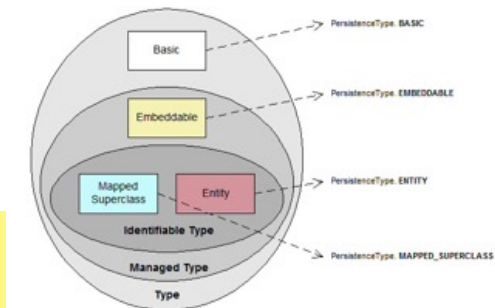

The Endless Void ...

Nobody Finds a Thing

image by DALL.E

Documentation as Denial-of-Service Attack

Assumption

You

- need* to document
- have limited time

* if we were younger and naive, we would have written „want“

Agenda

ACC

arc42 in a nutshell

What is a Canvas?

Tech-Documentation 101

Agenda

ACC

arc42 in a nutshell

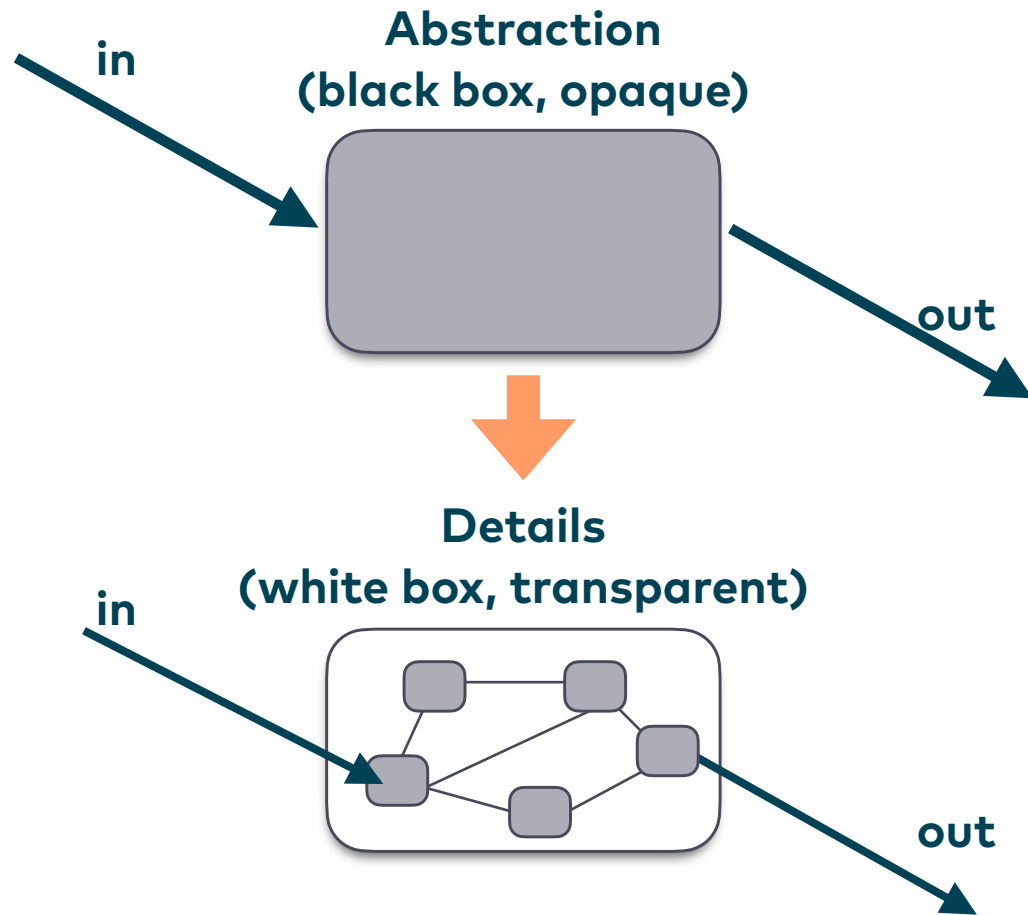

What is a Canvas?

Document less, but clever!

Abstraction is your best friend!

very sparse

less sparse!

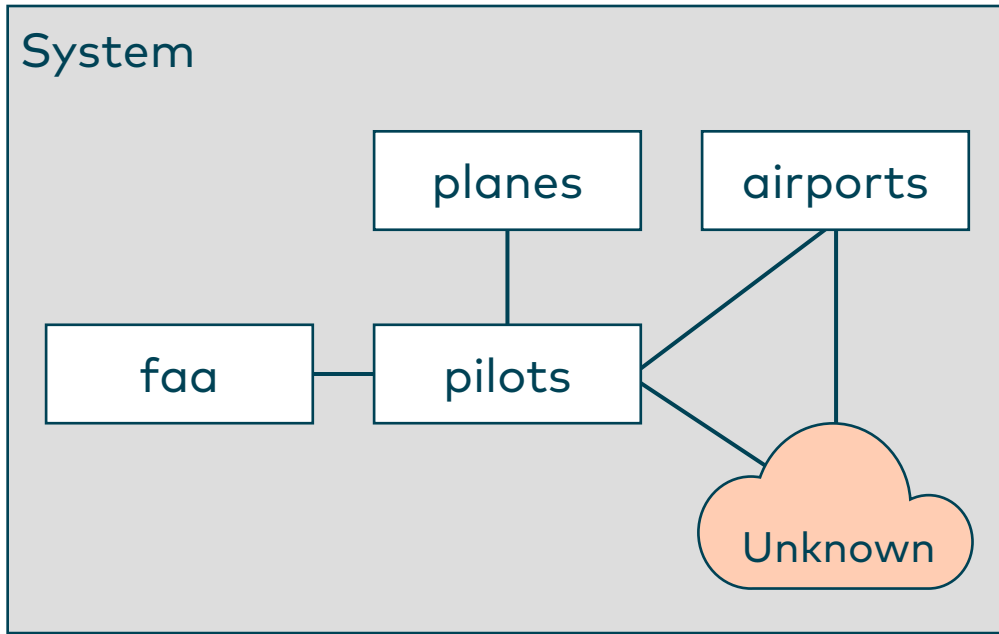

Courage to leave things out* (1)

Element	Description
PayProv	All our payment providers A-D

Courage to leave things out* (2)

Agenda

ACC

arc42 in a nutshell

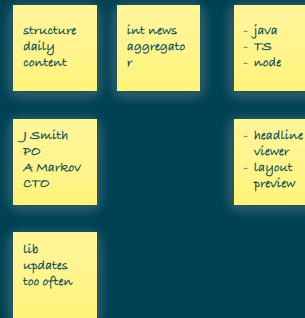

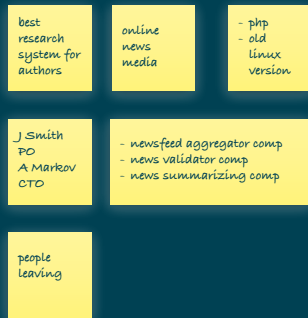

What is a Canvas?

Document less, but clever!

once upon a time...

once upon a time...

Can-what?

wtf?

what?

Canvas
[en: KannWas]

Canvas (1)

In software engineering, a canvas typically refers to a visual container where users can interact and manipulate elements to create or modify content.

Canvas (2)

... A canvas is a structured visualization that facilitates understanding and analysis of key elements of specific topics..

explained by us

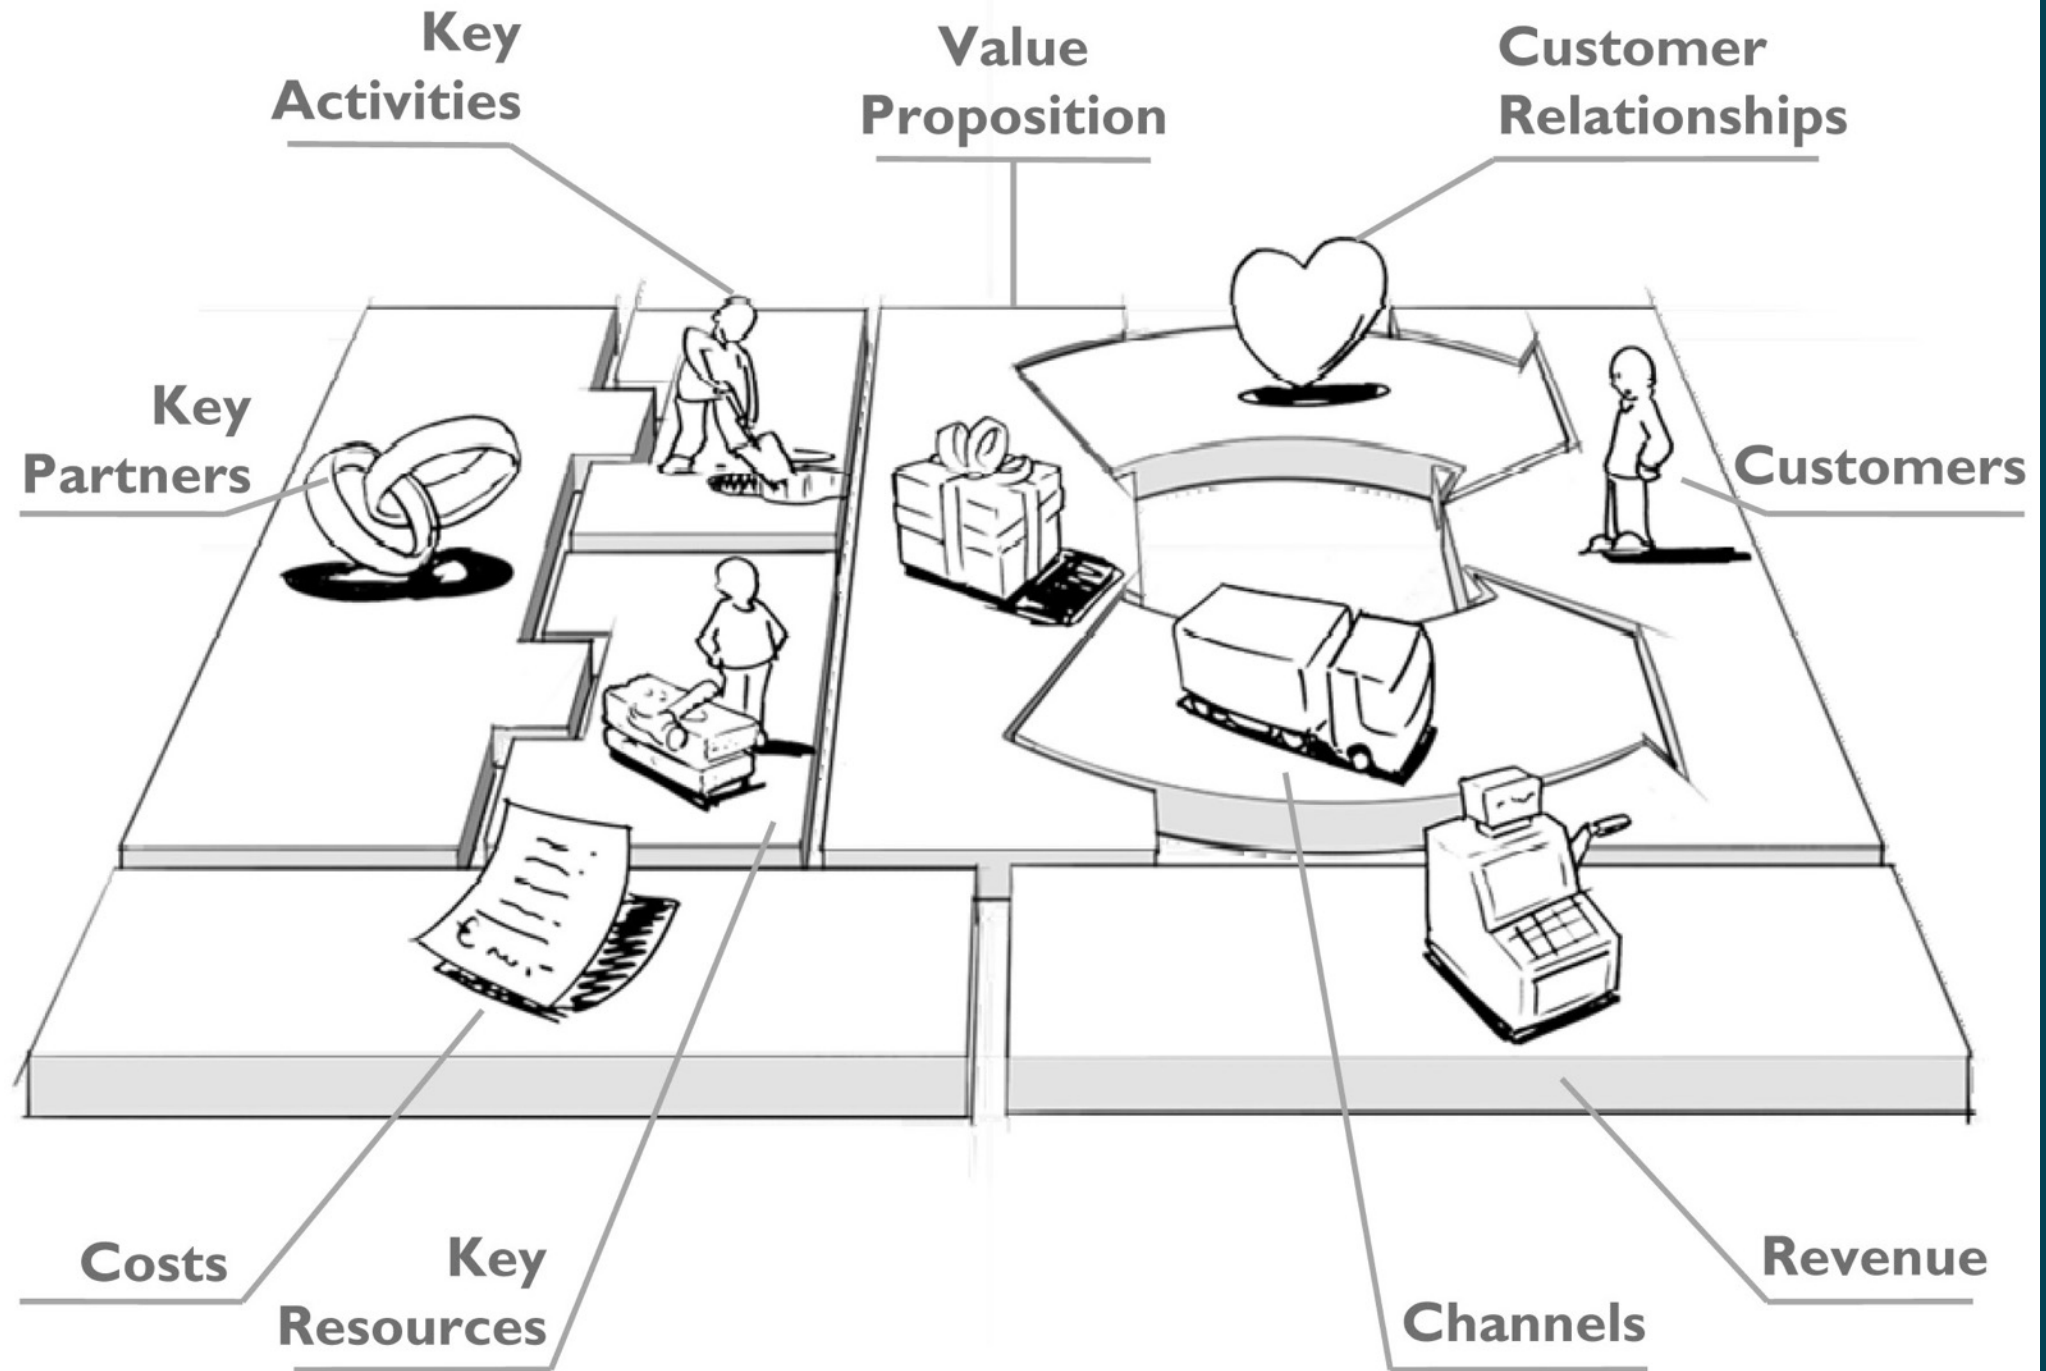

Business Model Canvas

WOW!

Business Model Canvas

Software Architecture Canvas

Oh, snap!!

<https://www.workingsoftware.dev/software-architecture-canvas/>

Thanks, Patrick!

Architecture Inception Canvas

Software System: _____ Designed by Team: _____ Workshop Date: _____ Iteration: _____

Business Case Brief description of the business case or economic driver behind the software system.	
Functional Overview The most important functional requirements at a high level.	Business Context Separate your system under construction as a black box from all its communication partners. Communication partners are neighbouring external systems and users.
Quality Goals The three most important quality goals for the architecture, which have the highest priority for the most important stakeholder.	Organisational Constraints Any organisational requirement that limits the software architects freedom of decision.
Architectural hypotheses Resulting architectural hypotheses from the previous step, including justifications for architectural decisions, including justifications for architectural decisions.	Technical Challenges & Risks Any technical requirement that limits the software architects freedom of decision.

What should the software do?

How can we achieve it?

How do we evaluate the situation?

Architecture Communication Canvas

System:	Created by:	Created for:	Date / Iteration:
---------	-------------	--------------	-------------------

Value Proposition

Major objectives.
What value does the system deliver?
What are the major business goals?

Core Functions

What are the most important functions of the system?
What activities or processes does it offer?

Core Decisions - Good or Bad

Which decisions lead to the current state of the system?

Technologies

Important technologies used for development and operation

Key Stakeholder

For whom are we creating value?
Who is paying for development?
Who is paying for operations?
Who are our most important customers?
Who are our most important contributors?

Quality Requirements

Speed, scalability, reliability, usability, security,
safety, capacity or similar.

Business Context

What are the most important external interfaces or neighboring systems?

Components / Modules

Major building blocks of the system

Core Risks and Missing Information

Potential problems and risks?
What information is missing or has gotten lost?
What is hindering the team from delivering better value faster?

Use Canvas for: Reviews

- Create canvas prior to review
- Common understanding
- Remind participants of „everything“

Use Canvas to: Kickstart

- Fastest possible start
- Avoid blank-paper syndrome

Use Canvas in: an Emergency

- Fastest possible documentation
- If nothing else works...

ACC

Examples

Value Proposition

MaMa is a multi-tenant SAAS platform to produce e-health cards for insurance companies, providing maximum flexibility with regards to data formats and business rules.

Core Functions

- SAAS to create eHealth cards
- Get photo from insured person
- 2nd level support for eHealth data acquisition process

Core Decisions - Good or Bad

- + operate MaMa as SaaS
- + domain-specific configuration
- + one tenant per VM
- + 100% generated persistence, incl. DB

- batch only data transfer
- ProcessControl subsystem violates SoC

Technologies

- Eclipse RCP frontend
- JBoss Drools rule engine
- Quartz scheduler
- Oracle DB
- Dedicated server, with Linux KVM hypervisor

Key Stakeholder

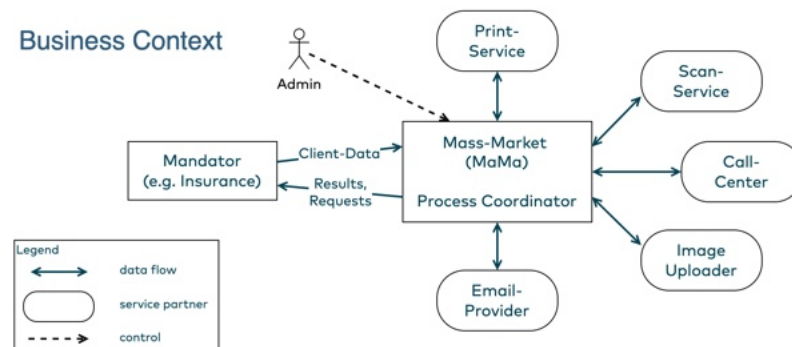

- Hosting Provider
- Tenants: health insurance companies
- Government regulation body (Gematik GmbH)
- DRV B Rentenversicherung Bund
- Print service provider
- Scan service provider
- G&D card issuer
- TÜV (auditor)
- BSI (auditor)

Quality Requirements

1. Strict separation of tenant data
2. New data always processed until end of business day

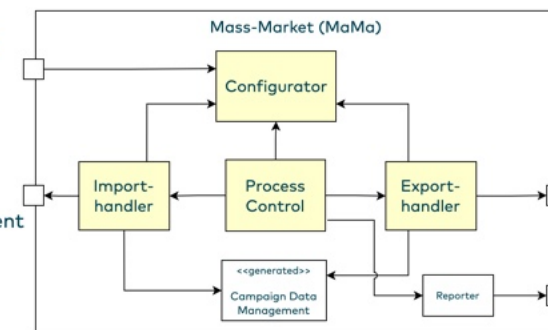

Business Context

Components / Modules

- Configurator
- Import handler
- Export handler
- ProcessControl
- (generated) Campaign DataManagement

Core Risks and Missing Information

- Outdated UI (Eclipse RCP)
- Batch strategy limits acceptance
- No end-user self-service options

Salary Management

Architecture Communication Canvas

System:

gehalt.io

Created by:

Ben Wolf

Created for:

Dev Team

Date / Iteration:

5. Feb 2025 / 3

Value Proposition

- Adjust salary per employee
- Compare salaries
- Prevent a pay gap
- Less errors due to less manual steps

Key Stakeholder

- Executive Board
- Back office
- Employees

Core Functions

- Create, edit and approve agreements
- Create and edit benefits
- Compare salaries of employee groups
- View your own agreement and your agreement history

Quality Requirements

1. Project members can easily be exchanged (Maintainability)
2. An INNOQ employee must not see someone else's info (Security)
3. The software is available during staff appraisals (Reliability)

Core Decisions - Good or Bad

- + SpringBoot + ecosystem as core framework
- + PostgreSQL database
- + Test-driven development approach

o Liquibase for db schema management

- JavaScript libraries for visualisation
- Translating terms to English instead of using Ubiquitous Language (German)
- Secure but complex deployment to AWS

Technologies

- Gradle 8
- Spring Boot 3
- Java 17
- junit 5
- Thymeleaf
- Node 18
- Vega, D3, Faucet (js libraries)
- AWS (Cognito, S3, SES, ECS, Lambdas)

Business Context

What are the most important external interfaces or neighboring systems?

Components / Modules

- AgreementManagement
- BenefitManagement
- EmployeeManagement
- Audit
- AccessControl
- Notifications

Core Risks and Missing Information

- Limited access to development resources
- Better existing (SaaS) solutions available?
- Deployment tends to be too complex

Value Proposition

Show detailed aggregate statistics of visitors and pageviews of all arc42 websites.

Key Stakeholder

- arc42 comitters
- users of arc42 website(s)
- web developers

Core Functions

- show detailed statistics for every arc42 website (.de, .org, docs, faq, canvas, quality and status)
- show issues/bug counters

Quality Requirements

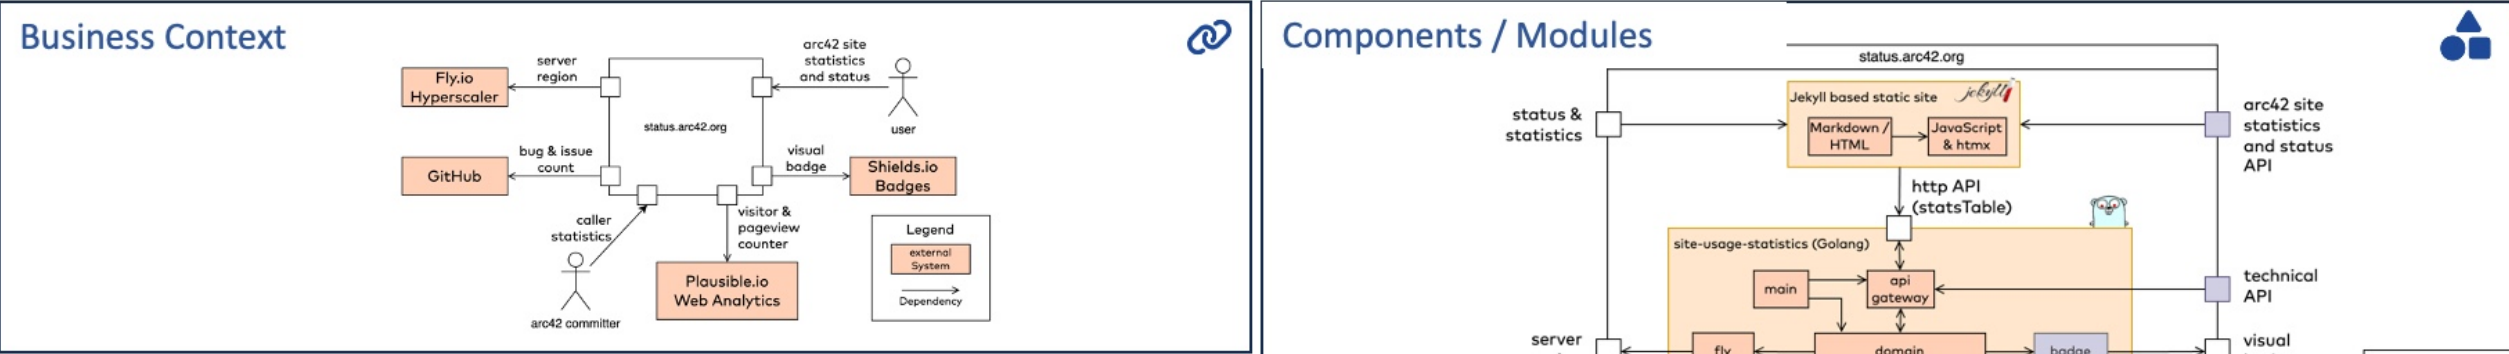

- accurate results
- simple visualization
- all relevant data at a glance

Core Decisions - Good or Bad

- + static site generator (Jekyll, Github pages) for main site
- + use https:// plausible.io to collect usage data
- + use fly.io for deployment
- + use Golang to wrap statistics service
- just ONE slow request to create HTML table (>3500ms)

Technologies

- Markdown + plain HTML
- Golang with packages
 - net/http, http/template
 - zerolog
- htmx to perform DOM manipulation at runtime
- fly.io for deployment

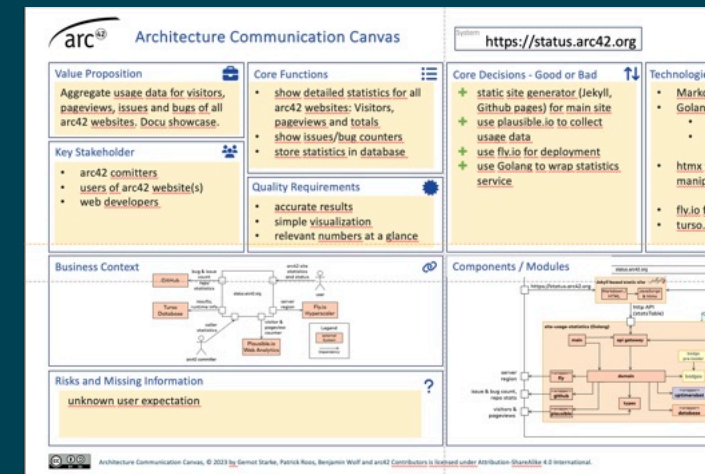

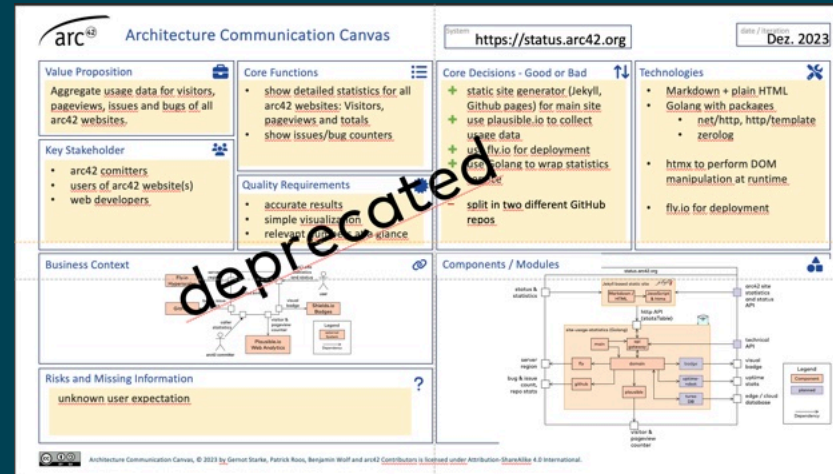

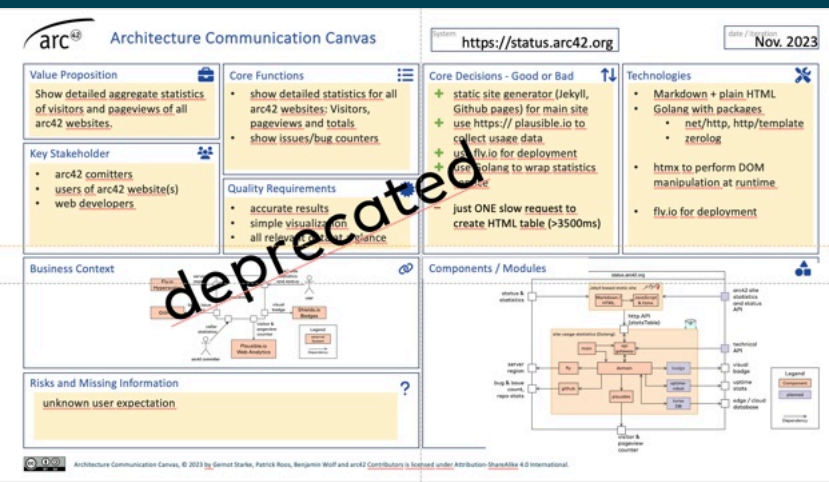

„Evolution“

Januar 2024

Dezember 2023

November 2023

"DANCIER" Open Source

Value Proposition

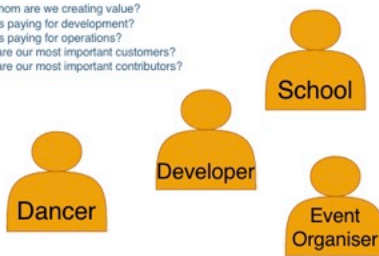

Major objectives.
What value does the system deliver?
What are the major business goals?

Provide an online community for dancers.

Dancers can find dance partners online (e.g. for participating in dance courses together)

Key Stakeholder

For whom are we creating value?
Who is paying for development?
Who is paying for operations?
Who are our most important customers?
Who are our most important contributors?

Core Functions

What are the most important functions of the system?
What activities or processes does it offer?

Connect Dancers with other dancers

Connect Dancers with schools, events

Dancer: Being presented with other dancers, find out if they can be their next dance partner.

School: Promote courses and events

Dancer: Communicate with other dancers, share information in a community

Quality Requirements

Speed, scalability, reliability, usability, security, safety, capacity or similar.

Easy to use

Attractive Team

Learning Project

Good recommendations

Reliable

Core Decisions - Good or Bad

Which decisions lead to the current state of the system?

Spring Boot Microservices for the backend

Angular SPA for the frontend

Built own solution for Authorization / Authentication

Kikeriki as Self Contained System

Docker build artefacts run on a hosted Server/VM

Recommendation as Self Contained System

Technologies

Important technologies used for development and operation

S3

Kubernetes

Angular

PostgreSQL

Docker

Java

Python

Kafka

Business Context

What are the most important external interfaces or neighboring systems?

Components / Modules

Major building blocks of the system

show-dancer

dancer

kikeriki

events

chat-dancer

recommendation

school

Done

Progress

Planned

Core Risks and Missing Information

Potential problems and risks?
What information is missing or has gotten lost?
What is hindering the team from delivering better value faster?

Potential Overengineering

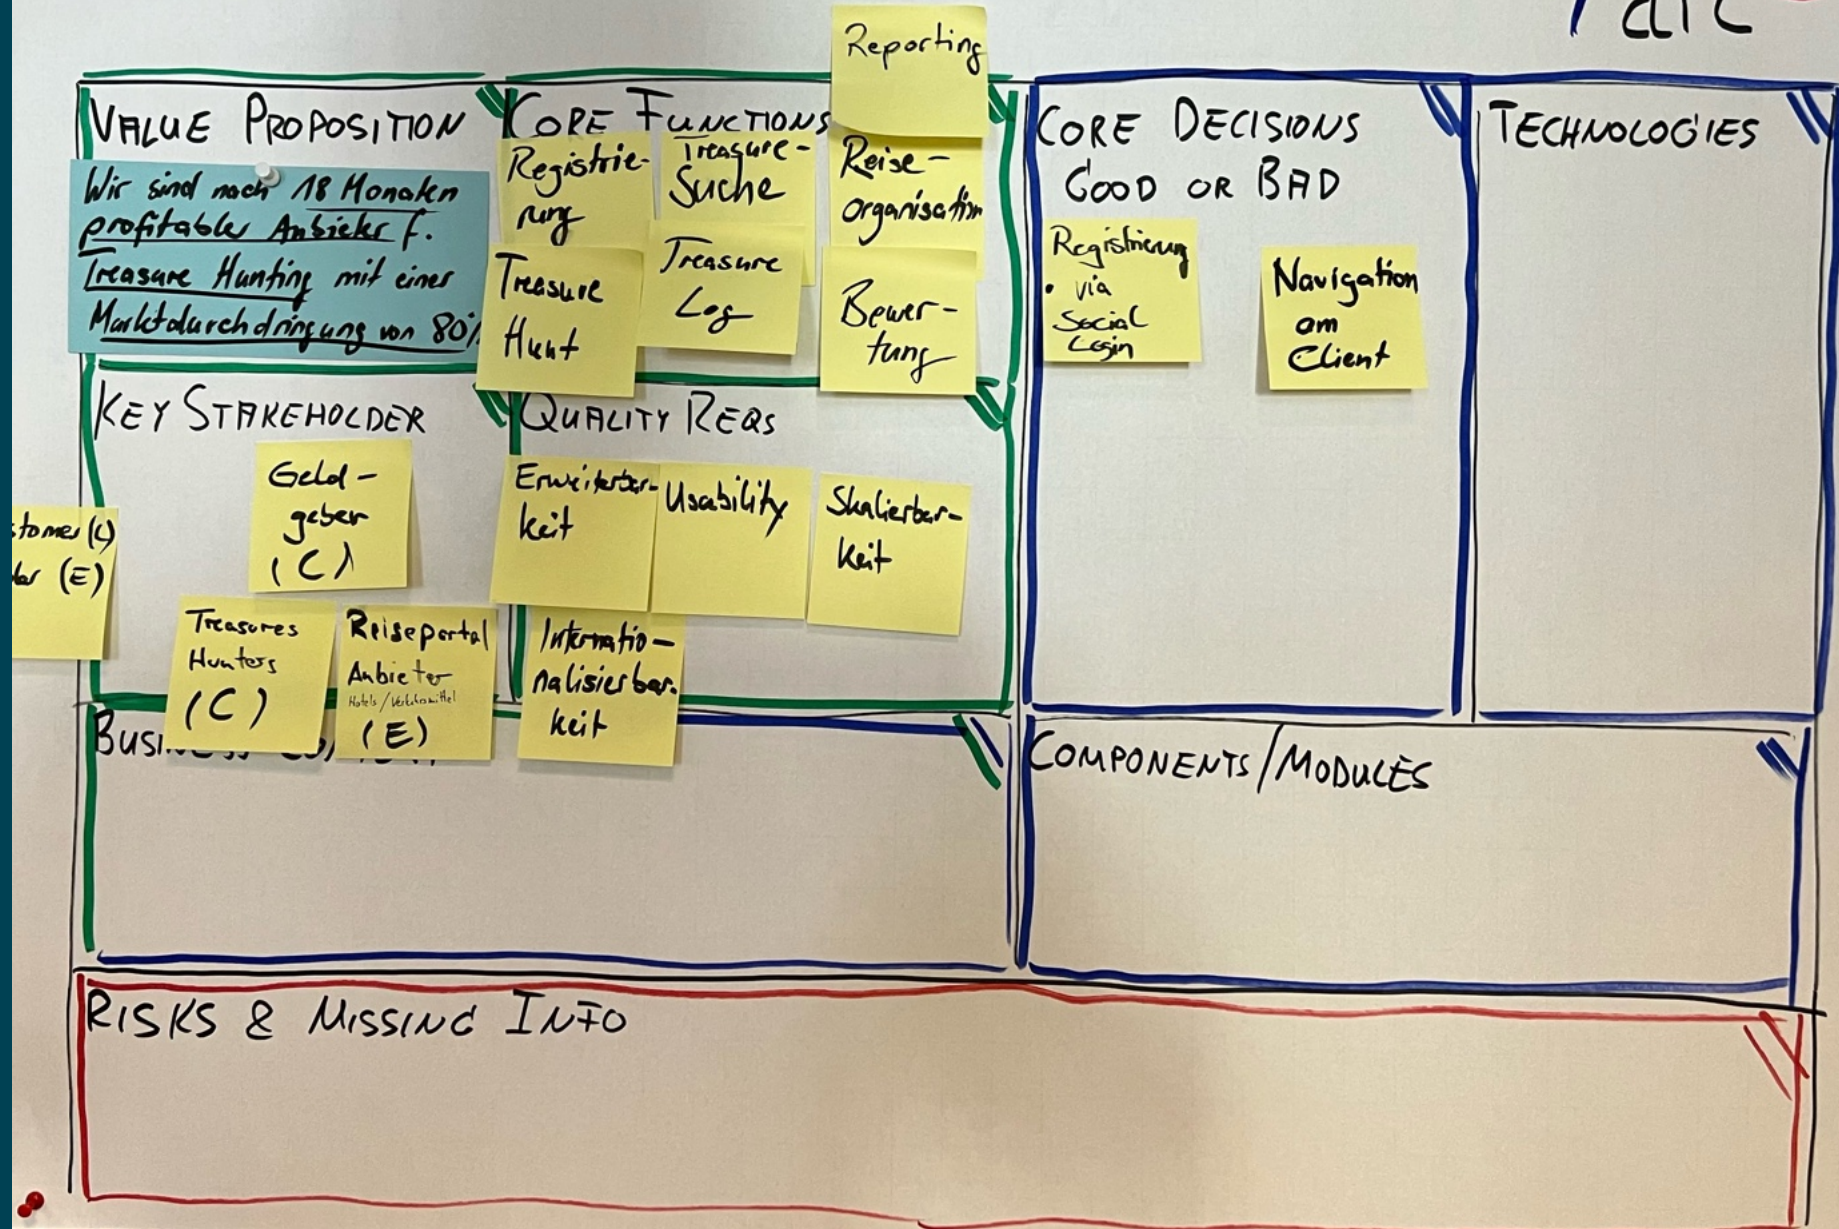

System delivers most value if "critical mass" of dancers use it

Adoption of Dance Schools pretty much unclear.

Potential Spam by schools/dancers

Miro

Tooling (3)

The screenshot displays the Miro web interface with the URL https://miro.com/app/board/uXjVM9NP_Ts/. The main canvas features the 'Architecture Communication Canvas' template, which is a structured grid for documenting system architecture. The template includes sections for Value Propositions, Core Functions, Core Decisions - Good or Bad, Technologies, Key Stakeholder, Quality Requirements, Business Context, Components / Modules, and Risk and Missing Information. Each section contains specific questions to guide the user's input. The Miro toolbar is visible at the top, and the arc42 logo is present in the top right corner of the canvas.
