Module Contents

- Data acquisition and dissemination
- Data warehouse and multidimensional modeling
- Analytical systems

Learning Outcomes**Business Intelligence I**

On successful completion, students will be able to

- understand the motivations and use cases for, as well as fundamentals of, business intelligence.
- explain relevant types of data.
- know and disambiguate techniques and methods for modeling and dissemination of data.
- expound upon the techniques and methods for the generation and storage of information. select appropriate business intelligence methods for given requirements.

Business Intelligence I

Course Code: DLMDSEBA01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Business Intelligence is about the generation of information based on operational data. It is used to enable goal-oriented management practices as well as the optimization of relevant business activities. This course introduces and discusses techniques, methods, and models for data provisioning and the generation, analysis, and dissemination of information.

Course Outcomes

On successful completion, students will be able to

- understand the motivations and use cases for, as well as fundamentals of, business intelligence.
- explain relevant types of data.
- know and disambiguate techniques and methods for modeling and dissemination of data.
- expound upon the techniques and methods for the generation and storage of information. select appropriate business intelligence methods for given requirements.

Contents

1. Motivation and Introduction
 - 1.1 Motivation and historical development of the field
 - 1.2 Business intelligence as a framework
2. Data Provisioning
 - 2.1 Operative and dispositive systems
 - 2.2 The data warehouse concept
 - 2.3 Architecture variants
3. Data Warehouse
 - 3.1 The ETL-Process
 - 3.2 DWH and Data-Mart concepts
 - 3.3 ODS and meta-data

4. Modeling Multidimensional Dataspaces
 - 4.1 Data modeling
 - 4.2 OLAP-Cubes
 - 4.3 Physical storage concepts
 - 4.4 Star-Schema and Snowflake-Schema
 - 4.5 Historization
5. Analytical Systems
 - 5.1 Freeform data analysis and OLAP
 - 5.2 Reporting systems
 - 5.3 Model-based analytical systems
 - 5.4 Concept-oriented systems
6. Distribution and Access
 - 6.1 Information distribution
 - 6.2 Information access

- The Data Processing Lifecycle
- Data Protection and Security
- Distributed Data
- Data Quality and Data Governance
- Data Modeling
- Metadata Management

Learning Outcomes**Concepts in Data Management**

On successful completion, students will be able to

- explain the steps of the data processing lifecycle and organize and adapt suitable techniques for each of these steps.
- evaluate suitable data protection and security measures for data-intensive systems to comply with ethics in data handling.
- describe the advantages and apply techniques for distributing data over multiple machines.
- assess and apply suitable techniques which comply with principles of data governance and data quality.
- explain and apply common data modeling techniques.
- describe different types of metadata, explain the meaning and importance of metadata and organize metadata for data-intensive systems.

Concepts in Data Management

Course Code: DLMDMCDM01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

In data-intensive systems, there are concepts and principles which are universal for almost all projects. Data management usually spans over all stages of the data processing lifecycle. In this course, students learn the meaning of each step of the data processing lifecycle and are enabled to use suitable techniques for each of these steps. In data ingestion and integration, students learn principles and techniques which enable them to ingest and integrate heterogeneous data from various data sources. As the core of most data management projects, students will learn data processing and storage techniques. To build data-intensive systems in an effective and goal-oriented way, students are presented with principles and techniques for data analysis and reporting. As storing and processing data becomes more prevalent in organizations as well as in everyday life, students learn about ethics in data handling and about complying with legal regulations and corresponding techniques. As far as scalability and reliability is concerned, students learn how distributing data across multiple machines can increase the performance of the system and the resilience and ease of recovery from failovers. With respect to organizing data in organizations and businesses, students learn principles and techniques for data governance, data modeling and data quality. Finally, students are enabled to understand different types of metadata and their respective meaning and organization in data management projects.

Course Outcomes

On successful completion, students will be able to

- explain the steps of the data processing lifecycle and organize and adapt suitable techniques for each of these steps.
- evaluate suitable data protection and security measures for data-intensive systems to comply with ethics in data handling.
- describe the advantages and apply techniques for distributing data over multiple machines.
- assess and apply suitable techniques which comply with principles of data governance and data quality.
- explain and apply common data modeling techniques.
- describe different types of metadata, explain the meaning and importance of metadata and organize metadata for data-intensive systems.

Contents

1. The Data Processing Lifecycle
 - 1.1 Data Ingestion and Integration
 - 1.2 Data Processing
 - 1.3 Data Storage
 - 1.4 Data Analysis
 - 1.5 Reporting
2. Data Protection and Security
 - 2.1 Ethics in Data Handling
 - 2.2 Data Protection Principles
 - 2.3 Data Encryption
 - 2.4 Data Masking Strategies
 - 2.5 Data Security Principles & Risk Management
3. Distributed Data
 - 3.1 Systems' Reliability and Data Replication
 - 3.2 Data Partitioning
 - 3.3 Processing Frameworks for Distributed Data
4. Data Quality and Data Governance
 - 4.1 Data and Process Integration
 - 4.2 Data as a Service
 - 4.3 Data Virtualization
 - 4.4 Data Governance
5. Data Modeling
 - 5.1 Entity Relationship Model
 - 5.2 Data Normalization
 - 5.3 Star and Snowflake Schema
6. Metadata Management
 - 6.1 Types of Metadata
 - 6.2 Metadata Repositories

Module Contents

- IT Governance: Motivation and Challenges
- COBIT Framework
- IT Compliance
- IT basic protection according to BSI IT law

Learning Outcomes**Corporate Governance of IT, Compliance, and Law**

On successful completion, students will be able to

- explain the terms IT governance and IT compliance.
- categorize typical processes and activities from the area of IT governance and IT compliance.
- give an overview of the COBIT framework and its elements.
- give an overview of IT-Governance and explain its structure.
- reproduce important laws and regulations in the field of IT law and explain their areas of application.

Corporate Governance of IT, Compliance, and Law

Course Code: DLMIGCR01-01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

In this course, students learn terms and frameworks related to IT governance and IT compliance. First, a short introduction and an overview of the different aspects of IT governance and IT compliance are given; then, COBIT and IT basic protection are explained as two frameworks that are used in industrial practice. In addition, this course will introduce and discuss important legal frameworks and standards related to IT law.

Course Outcomes

On successful completion, students will be able to

- explain the terms IT governance and IT compliance.
- categorize typical processes and activities from the area of IT governance and IT compliance.
- give an overview of the COBIT framework and its elements.
- give an overview of IT-Governance and explain its structure.
- reproduce important laws and regulations in the field of IT law and explain their areas of application.

Contents

1. IT governance: motivation and challenges
 - 1.1 Term: Governance and IT Governance
 - 1.2 Parameters for IT Governance
 - 1.3 Typical IT Governance Frameworks
2. COBIT framework
 - 2.1 Overview of the elements of COBIT
 - 2.2 The goals cascade of COBIT
 - 2.3 Governance and Management Objectives
 - 2.4 Use of COBIT
3. IT Compliance
 - 3.1 IT Compliance and IT Governance
 - 3.2 Examples of national and international guidelines
 - 3.3 Typical measures

4. Basic IT protection according to BSI
 - 4.1 Overview and structure
 - 4.2 The approach to IT protection
 - 4.3 Usage example of IT protection
5. IT Law
 - 5.1 Overview of relevant laws
 - 5.2 Protection of intellectual property
 - 5.3 IT Contracts
 - 5.4 Privacy

Module Contents

- Database Concepts
- Database Physiology
- Selected Relational Databases in Practice
- NoSQL Concepts
- Selected NoSQL Databases in Practice

Learning Outcomes**Relational and NoSQL Databases**

On successful completion, students will be able to

- differentiate types of databases, evaluate their respective usages, and describe their major components.
- explain and apply common database principles and technologies, such as the ACID principle and indexing strategies.
- explain and apply techniques for distributed databases, such as fragmentation, sharding and the assessment of consistency levels.
- differentiate between Relational Databases and NoSQL Databases in terms of usage and underlying principles.
- explain the concepts of key-value-oriented, document-oriented, column-oriented and graph-oriented Databases, use common databases of these kinds in data-intensive projects and assess their suitability for specific use cases.
- differentiate between common relational and NoSQL databases and conduct basic tasks in these databases.

Relational and NoSQL Databases

Course Code: DLMBIRND01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	None

Course Description

Storing and managing data in databases is at its very heart of all data-related projects. In this course, students learn concepts and technologies for the management and usage of relational and NoSQL databases. Students are provided with an in-depth look into the concepts and inner workings of databases and their major components. Students learn to differentiate between different categories of databases, and they are enabled to understand and use database principles and technologies such as the ACID principle, the differentiation between OLAP and OLTP systems, indexing strategies and industry standards for connecting to databases. As modern systems tend to increase in volume of data, students learn how distributing databases across clusters of machines can increase the scalability and reliability. Students learn concepts and techniques for distributing data across clusters, such as fragmentation and sharding, as well as the challenges and strategic decisions to be made within this context. The usefulness of relational SQL databases has been proven by their universal distribution and diverse applications. In some aspects, however, relational SQL databases do not meet the requirements of modern applications in terms of, for instance, flexibility and cardinality. This gave birth to a family of database concepts which became known as NoSQL databases. Students will learn how traditional SQL databases are different from these NoSQL databases which usually, and as one of the most noticeable characteristics, do not enforce a data schema on write. Students acquire a thorough understanding of the concepts of NoSQL databases and learn how to evaluate the suitability of various NoSQL databases for specific data-intensive projects. Students are enabled to explain the main concepts of Key-Value-oriented, Document-oriented, Column-oriented and Graph-oriented Databases and will be provided with applied examples for each of these database types. Finally, students are enabled to differentiate between common relational and NoSQL databases and learn how to practically perform common database tasks in each respective database.

Course Outcomes

On successful completion, students will be able to

- differentiate types of databases, evaluate their respective usages, and describe their major components.
- explain and apply common database principles and technologies, such as the ACID principle and indexing strategies.
- explain and apply techniques for distributed databases, such as fragmentation, sharding and the assessment of consistency levels.
- differentiate between Relational Databases and NoSQL Databases in terms of usage and underlying principles.
- explain the concepts of key-value-oriented, document-oriented, column-oriented and graph-oriented Databases, use common databases of these kinds in data-intensive projects and assess their suitability for specific use cases.
- differentiate between common relational and NoSQL databases and conduct basic tasks in these databases.

Contents

1. Database Concepts
 - 1.1 The ACID Principle for Databases
 - 1.2 OLAP and OLTP
 - 1.3 Data Handling Ethics
 - 1.4 Cardinality and its Limits
2. Database Physiology
 - 2.1 Database Components
 - 2.2 Database Categorization
 - 2.3 Indexing
 - 2.4 Vertical Fragmentation and Sharding
 - 2.5 Connecting to Databases
3. Selected Relational Databases in Practice
 - 3.1 Introduction to SQL
 - 3.2 Data Schemas
 - 3.3 MySQL
 - 3.4 PostgreSQL
 - 3.5 SQL Server
 - 3.6 Snowflake

4. NoSQL Concepts
 - 4.1 Schemaless Data and the ACID Principle
 - 4.2 Types of NoSQL Databases
 - 4.3 Row-Based and Column-Based Storage
 - 4.4 Updates and Appends
 - 4.5 Multi-Model Databases
5. Selected NoSQL Databases in Practice
 - 5.1 Redis
 - 5.2 MongoDB
 - 5.3 Cassandra
 - 5.4 HBase
 - 5.5 Neo4j

Module Contents

- Definition of Data Query Languages and Typical Examples
- Different Types of Data and the Role of Databases
- Data Query Languages and Standards
- Fundamentals of SQL
- Use of Data Query Languages for NoSQL Database and other Purposes
- Data Query Languages in the Context of Application Programming

Learning Outcomes**Data Query Languages**

On successful completion, students will be able to

- understand the basics of data query languages.
- understand different data structuring options and types of data sources.
- explain the difference between various data query languages, their application and their distinction from other programming languages.
- review and determine data query languages for appropriate use.
- apply and create SQL queries on self-created and given data in relational databases.
- understand the use of data query languages for application programming.

Course Code: DLMDMDQL01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

The course is a general introduction to data query languages and the use by application interface-oriented and programming-oriented approaches, with a focus on SQL for relational databases.

Course Outcomes

On successful completion, students will be able to

- understand the basics of data query languages.
- understand different data structuring options and types of data sources.
- explain the difference between various data query languages, their application and their distinction from other programming languages.
- review and determine data query languages for appropriate use.
- apply and create SQL queries on self-created and given data in relational databases.
- understand the use of data query languages for application programming.

Contents

1. Introduction to Data Query Languages
 - 1.1 Definition of Data Query Languages
 - 1.2 Differentiation to other Languages
 - 1.3 Typical Examples of Data Query Languages
2. Data Management
 - 2.1 Data Life Cycle
 - 2.2 Types of Datasets (Structured, Semi-Structured and Unstructured Data)
 - 2.3 Role of Databases (SQL & NoSQL Databases)
3. Fundamentals of SQL
 - 3.1 Brief Overview
 - 3.2 Data Definition Language (DDL)
 - 3.3 Data Query Language (DQL)
 - 3.4 Data Manipulation Language (DML)

4. Advanced SQL
 - 4.1 Transaction Control Language (TCL)
 - 4.2 Data Control Language (DCL)
 - 4.3 Differences between various SQL Versions (MSSQL, PL/SQL, etc.)
5. Data Query Languages for NoSQL Database and other Purposes
 - 5.1 Document Databases (N1QL/couchbase and MongoDB)
 - 5.2 Graph Databases (Cypher/Neo4j)
 - 5.3 GraphQL for APIs
6. Using Data Query Languages within Application Programming
 - 6.1 Special Aspects (Architecture, Connection Management, Coding and Testing)
 - 6.2 Examples (SQL in Python and SQL in Java)

Implementation of a business intelligence use case.

Learning Outcomes**Project: Business Intelligence**

On successful completion, students will be able to

- transfer knowledge of business intelligence methodology to real-world use cases.
- analyze the suitability of different approaches with respect to the project task.
- critically reason about relevant design choices.
- make apposite architectural choices.
- formulate and implement a business intelligence use case.

Project: Business Intelligence

Course Code: DLMDSEBA02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDSEBA01

Course Description

In this course the students will transfer knowledge of business intelligence approaches and methods to the implementation of a real-world business analytical use case. To accomplish this goal, students must look closely at the given task and find an apposite approach by analyzing, evaluating, and comparing different solution strategies and their constituent parts. The found solution then has to be implemented in order to arrive at a running business analytical system.

Course Outcomes

On successful completion, students will be able to

- transfer knowledge of business intelligence methodology to real-world use cases.
- analyze the suitability of different approaches with respect to the project task.
- critically reason about relevant design choices.
- make apposite architectural choices.
- formulate and implement a business intelligence use case.

Contents

- This second course in the Business Analyst specialization aims at the practical implementation of a business intelligence project. Students can choose from a list of project topics or contribute their own ideas.

Module Contents

At the end of the module “Ethic & Societal Considerations in Data Management” students are able to identify and explain the societal, political and economic effects and side-effects of data management. They also know about adequate solution approaches addressing those effects. During the course they write a scientific paper on a specialist topic proving their ability to independently analyze selected topics and link them with well-known concepts, as well as to critically question and discuss them.

Learning Outcomes**Seminar: Ethic & Societal Considerations in Data Management**

On successful completion, students will be able to

- explain the influence and impact of 'Big Data' applications on societal, economic, and political topics.
- understand the general ethical relevance of data management techniques.
- explain the critical data study approach and its main drivers.
- name selected current societal topics and issues in data management in the fields of privacy, health, social media, personal finance etc.
- describe approaches and methods to solve the identified problems.
- treat a selected topic in a scientific manner in the form of a written essay.
- critically question and discuss current societal and political issues arising from the recent advances in data management.
- develop problem-solving skills and processes through reflection on the possible impact of their future occupation in the sector of data management.

Seminar: Ethic & Societal Considerations in Data Management

Course Code: DLMDMSESC01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Over the last decade Big Data applications have become an underlying matter of course for many activities in private, professional, and social life. This course discusses impacts and side-effects of data management applications from an ethical and societal perspective and provides adequate solution approaches.

Course Outcomes

On successful completion, students will be able to

- explain the influence and impact of 'Big Data' applications on societal, economic, and political topics.
- understand the general ethical relevance of data management techniques.
- explain the critical data study approach and its main drivers.
- name selected current societal topics and issues in data management in the fields of privacy, health, social media, personal finance etc.
- describe approaches and methods to solve the identified problems.
- treat a selected topic in a scientific manner in the form of a written essay.
- critically question and discuss current societal and political issues arising from the recent advances in data management.
- develop problem-solving skills and processes through reflection on the possible impact of their future occupation in the sector of data management.

Contents

- The course covers current topics concerning the societal impact of data management.
- Problems like violation of privacy, surveillance capitalism, invasive marketing, misuse of health records and data, algorithmic discrimination concerning race, gender, religion or sexual attitude, political persecution or dissemination of fake news are among the topics the students have to analyze. Solution approaches like privacy concepts and compliance, legal regulations, codes of conduct or counter mapping should be identified and mapped to the specific problem field.

Strategic Management

Course Code: DLMBSME01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MBA	English		5	None

Course Description

Various methods of strategic market analysis are presented in this course so as to allow students to evaluate risks and opportunities in markets and understand strengths and weaknesses of organizations that face specific market situations. Supported by new developments in the field of market research, the process for identifying and analyzing core competencies and competitive advantages in national and international environments is discussed at length. Students are supported to plan strategic alternatives and to implement and control these by taking on fictitious roles within the organization. Exercises and case studies help students to identify with the role of management and participate in the strategic planning process as well as in operational management. This helps students understand the problems companies regularly face and comprehend how methods of modern management can be used in order to solve these.

Course Outcomes

On successful completion, students will be able to

- Understand the entire process of strategic planning from the organizational planning, the implementation to the evaluation and controlling.
- Apply appropriate analysis tools in order to methodically address specific business decisions.
- Analyze the capabilities of their organization from a functional and resource perspective by evaluating its strengths and weaknesses.
- Develop a better understanding of the wider business environment by analyzing the opportunities and threats facing their organization.
- Evaluate strategies by employing appropriate controlling tools.

Contents

1. What is Strategy?
 - 1.1 What is a Corporate Strategy?
 - 1.2 What Has to be Taken into Consideration when Making Strategic Decisions?
 - 1.3 Who Takes Part in Developing a Strategy?
 - 1.4 What is Included in a Solid Strategic Plan?

2. The Strategic Environment
 - 2.1 Where Are We in the Market Place? The Macro Environment
 - 2.2 Where Are We in the Market Place? The Micro Environment
 - 2.3 Analysis, Strategic Capabilities, and the Five Forces Model
3. The Position in the Market
 - 3.1 Why Do We Exist?
 - 3.2 What is Our Position in the Market?
 - 3.3 What Information Does the Company Need?
 - 3.4 What Capabilities Does the Company Have?
 - 3.5 What Capabilities Do Others Have?
4. What Strategic Options Are Available to the Strategic Business Unit (SBU)?
 - 4.1 What Strategic Options Does the SBU Have?
 - 4.2 Interactive Strategies
 - 4.3 Product Life Cycle
5. What Strategic Options Are Available to the Corporation?
 - 5.1 Areas to Consider When Formulating a Strategy
 - 5.2 Strategic Options
 - 5.3 Outsourcing
 - 5.4 Product Portfolio Analysis Using the BCG Matrix
 - 5.5 Product Portfolio Analysis Using the GE-McKinsey Matrix
6. What International Strategies Are Available?
 - 6.1 Why Do Companies Go International?
 - 6.2 What Factors Contribute to the Decision About Which Country to Invest In?
 - 6.3 How Can a Company Invest Internationally?
7. Do-It-Yourself, Buy, or Ally?
 - 7.1 Do-It-Yourself
 - 7.2 Mergers and Acquisitions (M&As)
 - 7.3 Strategic Alliances
 - 7.4 How to Decide Whether to Buy, Ally, or Do-It-Yourself?
8. How to Evaluate Strategies?
 - 8.1 How to Evaluate Strategy?
 - 8.2 Implementing Strategy

Module Contents

- Traditional and Big Data Warehousing
- Data Warehouse Architecture (DWHA): Single-Layer, Two-Layer and Three-Layer Architectures
- Data Warehouse Components
- The Two Main Classification Models
- Representatives of these Models
- DWHA „Big Picture“ (Representatives in the Context of Structured and Unstructured Data, New Technologies and the Business Intelligence Process Components)

Learning Outcomes**Data Warehousing Architecture Types**

On successful completion, students will be able to

- understand relevant types of data, as well as fundamentals of traditional and NoSQL Data Warehousing.
- explain frameworks to address big data challenges in particular of unstructured data.
- explain the two main DWHA classifications views and the inter-relations between them that observe DWHAs from different views.
- identify the main types of architecture belonging to the above classifications and view their characteristics.
- transfer knowledge of application- specific Data Warehouse methodology to implementations that are particularly relevant in practice.

Data Warehousing Architecture Types

Course Code: DLMBIDWAT01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDSEBA01, DLMBIRND01

Course Description

Nowadays, Data Warehouses, DWHs for short, are faced with big data namely with structured and unstructured data. In order to address this challenges, DWHs are extended and merged with state-of-the art technology. In addition, a variety of practical applications has resulted in different architectures. The course covers techniques for the technical processing of data, explains the two main Data Warehousing Architecture (DWHA) classifications and introduces the main representatives of these two classes.

Course Outcomes

On successful completion, students will be able to

- understand relevant types of data, as well as fundamentals of traditional and NoSQL Data Warehousing.
- explain frameworks to address big data challenges in particular of unstructured data.
- explain the two main DWHA classifications views and the inter-relations between them that observe DWHAs from different views.
- identify the main types of architecture belonging to the above classifications and view their characteristics.
- transfer knowledge of application- specific Data Warehouse methodology to implementations that are particularly relevant in practice.

Contents

1. Introduction
 - 1.1 Big data: Structured, Semi-Structured and Unstructured Data Types
 - 1.2 Unstructured Big Data Challenges
 - 1.3 Characteristics of Data Warehouses
 - 1.4 RDBMS-Based Data Warehousing
 - 1.5 NoSQL-Based Data Warehousing
2. Data Warehouse Architecture
 - 2.1 Single-Layer Architecture
 - 2.2 Two-Layer Architecture
 - 2.3 Three-Layer Architecture

3. Data Warehouse Components
 - 3.1 Databases
 - 3.2 ETL-Process Components
 - 3.3 Data Marts
 - 3.4 Bus Architecture
4. Classification
 - 4.1 Layer-Based Classification
 - 4.2 Component-Based Classification
5. Big Data Frameworks
 - 5.1 Hadoop
 - 5.2 Hive
 - 5.3 Data Lake
6. Data Warehouse Architecture (DWHA) Types
 - 6.1 Hub-and-Spoke DWHA
 - 6.2 Data Mart Bus DWHA
 - 6.3 Centralised DWHA
 - 6.4 Independent DWHA
 - 6.5 Federated DWHA
 - 6.6 Virtual DWHA
 - 6.7 Distributed DWHA
 - 6.8 Big DWHA
 - 6.9 Architecture Overview and Distribution
7. Application-Specific Data Warehouses (DWHs)
 - 7.1 Top-Down and Bottom-Up Approaches
 - 7.2 Real-Time DWHs
 - 7.3 Closed-Loop DWHs
 - 7.4 Active DWHs
 - 7.5 Practical Implementations

Extract, Transform and Load Technologies

Course Code: DLMBIETLT01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDSEBA01, DLMDMDQL01

Course Description

In order to merge and prepare data from several operational data sources, it is converted into management-relevant information via a process of targeted conversion. This is carried out using three steps (extract, transform, and load) which are collectively known as the ETL process. The modeling of the process depends, among other things, on the structure of the underlying data and can also have different structures depending on the requirements. Extensive tests are therefore an essential part of the overall concept.

Course Outcomes

On successful completion, students will be able to

- illustrate and explain the general ETL process issues and its three essential steps.
- explain the main differences between SQL- and NoSQL-Warehousing.
- understand the ETL construction process for SQL- Data Warehousing and, in contrast, the main properties of NoSQL-Warehousing ETL framework.
- compare some ETL-Tools and their main features and functions.
- formulate and implement an ETL-testing use case.

Contents

1. Introduction
 - 1.1 The Typical Real-Life ETL Cycle in Data Warehouses
 - 1.2 Step 1: Data Extraction
 - 1.3 Step 2: Transformation
 - 1.4 Step 3: Loading
 - 1.5 SQL- and NoSQL Warehousing
2. ETL-Process for SQL Warehousing
 - 2.1 Building Fact Tables
 - 2.2 Building Dimensions
 - 2.3 Referential Integrity
 - 2.4 Types of Data Sources
 - 2.5 Modeling the Extract Process
 - 2.6 Common Transformations
 - 2.7 Loading

3. ETL-based Frameworks for NoSQL Warehousing
 - 3.1 Data Extraction
 - 3.2 Transformation Rules
 - 3.3 Data Quality
 - 3.4 Loading Szenarios
 - 3.5 ETL vs. ELT
4. ETL-Tools
 - 4.1 Power BI
 - 4.2 MS Integration Services
5. Practical Implementation Scenarios of ETL
 - 5.1 Example ETL Flow
 - 5.2 Package Control Flow
6. ETL Testing
 - 6.1 Production Validation Testing
 - 6.2 Source-to-Target Count Testing
 - 6.3 Data Integration Testing

Module Contents

- Social science and research paradigms
- Case study research
- Specific topics of qualitative research
- Advanced issues of qualitative research conceptualization and data analysis
- Underlying assumptions of quantitative research: concepts and consequences
- Evaluation research

Learning Outcomes**Advanced Research Methods**

On successful completion, students will be able to

- understand and apply scientific methodologies in conducting empirical research.
- plan, design, and prepare research proposals.
- differentiate between different types of case studies, select and apply different data collection strategies.
- plan, conduct, and analyze case studies and surveys.
- scientifically analyze quantitative and qualitative data.
- conduct evaluation research to determine quality of research.

Advanced Research Methods

Course Code: DLMARM01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Advanced research methods, specifically business research, is scientific inquiry that attempts to uncover new information which helps a business improve performance, maximizing shareholder value while adhering to ethical and moral compliance standards. Managers seeking to conduct empirical research must maintain validity, reliability, and trustworthiness when utilizing scientific methodologies in order to produce meaningful and actionable results. Research proposals are typically written prior to conducting research, which have a certain structure, enabling the researcher to properly plan, conduct, and analyze case studies and surveys. Different data collection strategies are used to collect both qualitative and quantitative data, depending on the research proposal goals. Managers utilize their understanding of research methodologies to accurately assess the quality of research.

Course Outcomes

On successful completion, students will be able to

- understand and apply scientific methodologies in conducting empirical research.
- plan, design, and prepare research proposals.
- differentiate between different types of case studies, select and apply different data collection strategies.
- plan, conduct, and analyze case studies and surveys.
- scientifically analyze quantitative and qualitative data.
- conduct evaluation research to determine quality of research.

Contents

1. Theoretical Background: Social Science and Research Paradigms
 - 1.1 What is a Paradigm?
 - 1.2 Empiricism
 - 1.3 Critical Rationalism
 - 1.4 Epistemological Anarchism
 - 1.5 Structural Functionalism
 - 1.6 Symbolic Interactionism
 - 1.7 Ethnomethodology

2. Case Study Research
 - 2.1 Types of Case Study Research
 - 2.2 Maintaining Quality in Case Study Research
 - 2.3 Case Study Design
 - 2.4 Implementing Case Studies
 - 2.5 Analyzing Case Studies
3. Specific Topics of Qualitative Research
 - 3.1 Idea Generation
 - 3.2 Critical Incident Technique
 - 3.3 Understanding Communication: Discourse Analysis
 - 3.4 Perceiving Perception: Interpretive Phenomenological Analysis
4. Advanced Issues of Qualitative Research Conceptualizing and Data Analysis
 - 4.1 Measurement Theory
 - 4.2 Index and Scale Construction
 - 4.3 Types of Scale Construction
 - 4.4 The Problem of Nonresponse and Missing Data
 - 4.5 Implications of IT for Research Strategies
5. Underlying Assumptions of Quantitative Research: Concepts and Consequences
 - 5.1 Classical Test Theory
 - 5.2 Probabilistic Test Theory
 - 5.3 Advanced Topics of Test Theory
6. Evaluation Research
 - 6.1 What is Evaluation Research?
 - 6.2 Types of Evaluation Research
 - 6.3 Meta-Analysis
 - 6.4 Meta-Evaluation

Module Contents

In this course, students research, explore and present data warehouse approaches and methods.

Learning Outcomes**Seminar: Data Warehouse Approaches and Methodologies**

On successful completion, students will be able to

- demonstrate the ability to conduct research, read critically, and evaluate sources.
- reflect on the exploration of data warehousing approaches and methods.
- evaluate data warehousing methods based on a common set of attributes.
- describe data warehousing methods including business requirements analysis, data design, architectural design, implementation and deployment.
- explain the major techniques of data warehousing and all related procedures.
- demonstrate the meaningful use of technical skills through documentation.

Data Modeling and Reporting

Course Code: DLMBIDMR01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	None

Course Description

This course provides an overview of data modeling and its key aspects and methods. To this end, data modeling concepts are introduced, the data modeling lifecycle is learned, and some important data modeling techniques and data extraction for SQL and NoSQL databases are presented. In addition, the concepts of online transactional processing and online analytical processing are discussed.

Course Outcomes

On successful completion, students will be able to

- discuss the basic concepts of data modeling.
- comprehend the life cycle of data modeling.
- understand the different data model types.
- summarize the main SQL and NoSQL data extraction techniques.
- explain the main methods of online transaction processing.
- describe the main concepts of online analytical processing.

Contents

1. Basic Concepts
 - 1.1 Batch Data Processing
 - 1.2 Relational Data
 - 1.3 Non-Relational Data
 - 1.4 Streaming Data
 - 1.5 Big Data
2. Data Modeling Life Cycle
 - 2.1 Understand the Business
 - 2.2 Acquire and Explore Data
 - 2.3 Model and Validate
 - 2.4 Build and Deploy
 - 2.5 Test, Release and Document

3. Data Model Types
 - 3.1 Hierarchical Model
 - 3.2 Relational Model
 - 3.3 Network Model
 - 3.4 Object-Oriented Model
 - 3.5 Entity-Relationship Model
4. Data Extraction Using SQL
 - 4.1 Basic Concepts
 - 4.2 Querying and Filtering
 - 4.3 Aggregate Functions
 - 4.4 Sorting and Grouping Results
 - 4.5 Querying Multiple Tables
5. NoSQL Data Extraction
 - 5.1 Motives and Characteristics
 - 5.2 Key-Value Stores
 - 5.3 Document Stores
 - 5.4 Column Family Stores
 - 5.5 Graph Databases
6. Data Reporting
 - 6.1 Reporting Tools
 - 6.2 Layout and Format
 - 6.3 Automated Data Reporting
 - 6.4 SQL Reporting
7. Online Transactional Processing
 - 7.1 Transactional Data
 - 7.2 Key Selection Criteria
 - 7.3 Capability Matrix
 - 7.4 Technology Choices

8. Online Analytical Processing
 - 8.1 OLAP Cubes Structure
 - 8.2 Basic Analytical Operations
 - 8.3 Types of OLAP Systems
 - 8.4 Multidimensional Processing
 - 8.5 Hybrid Processin

Module Contents

In this course, students will learn to apply the data modeling and reporting methods learned in the previous course to a hands-on project.

Learning Outcomes**Project: Data Modeling and Reporting**

On successful completion, students will be able to

- implement a project with a focus on data modeling using SQL.
- practice and refine the knowledge they have learned about modeling data.
- demonstrate how to query, filter, sort, and report on data.
- customize output and evaluate results.
- show meaningful application of technical skills through documentation.
- introduce the major data modeling techniques and any associated procedures.

Project: Data Modeling and Reporting

Course Code: DLMBIPDMR01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDSEBA01, DLMBIDMR01

Course Description

The focus of this course is to apply the previously acquired knowledge on data modeling, reporting to a practical project implementation and to reflect on the results. Students will carry out the project based on a given set of requirements and document the results.

Course Outcomes

On successful completion, students will be able to

- implement a project with a focus on data modeling using SQL.
- practice and refine the knowledge they have learned about modeling data.
- demonstrate how to query, filter, sort, and report on data.
- customize output and evaluate results.
- show meaningful application of technical skills through documentation.
- introduce the major data modeling techniques and any associated procedures.

Contents

- In this course, students conduct and document a data modeling project, applying the topics covered in previous modules based on a given set of requirements. They use SQL to implement the designed model.

Module Contents

Data Engineering

- Principles of data engineering
- Paradigms for data processing at scale
- Overview on data governance, security, and protection
- Common cloud platforms
- DataOps approach

Project: Data Engineering

- Knowledge transfer and application to practical problems
- Implementation of a data infrastructure building block

Learning Outcomes

Data Engineering

On successful completion, students will be able to

- understand the foundational concepts in data engineering.
- categorize important data-processing classes.
- summarize common approaches to data governance and security.
- compare different common public cloud offerings.
- recognize current approaches to data operations (DataOps).

Project: Data Engineering

On successful completion, students will be able to

- apply the principles of data engineering to a practical application.
- analyze data engineering approaches with respect to a given project task.
- reason about the benefits and drawbacks of solution alternatives for a given implementation task.
- make apposite architectural choices.
- implement aspects of a modern data pipeline

Data Engineering

Course Code: DLMDSEDE01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

The focus of this first course in the Data Engineering elective module is to introduce students to important principles, concepts, methods and approaches in this subject domain. In order to achieve this goal, the course moves from an exposition of the foundational principles of data engineering to a thorough treatment of the core data processing classes. Modern architectural paradigms such as Microservices are explained, and important factors in data governance and protection are addressed. Aspects of cloud computing are introduced via an overview of the most common offerings on the market. Finally, a state-of-the-art agile perspective on the operation of data pipelines is given by an exposition to the emerging notion of DataOps.

Course Outcomes

On successful completion, students will be able to

- understand the foundational concepts in data engineering.
- categorize important data-processing classes.
- summarize common approaches to data governance and security.
- compare different common public cloud offerings.
- recognize current approaches to data operations (DataOps).

Contents

1. Foundations of Data Systems
 - 1.1 Reliability
 - 1.2 Scalability
 - 1.3 Maintainability
2. Data Processing at Scale
 - 2.1 Batch Processing
 - 2.2 Stream and Complex Event Processing
3. Microservices
 - 3.1 Introduction to Microservices
 - 3.2 Implementing Microservices

4.	Governance & Security
4.1	Data Protection
4.2	Data Security
4.3	Data Governance
5.	Common Cloud Platforms & Services
5.1	Amazon AWS
5.2	Google Cloud
5.3	Microsoft Azure
6.	Data Ops
6.1	Defining Principles
6.2	Containerization
6.3	Building Data Pipelines

Project: Data Engineering

Course Code: DLMDSEDE02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDSEDE01

Course Description

The second course of the Data Engineering elective module builds upon theoretical and methodological insights from the first course. It provides opportunities for students to put their newly-acquired knowledge into practical application by completing a data engineering project. In order to find an appropriate and viable approach, students will have to reason about and evaluate the benefits and drawbacks of possible architectural choices. Once an informed decision has been met, the chosen approach is implemented as a running piece of data infrastructure.

Course Outcomes

On successful completion, students will be able to

- apply the principles of data engineering to a practical application.
- analyze data engineering approaches with respect to a given project task.
- reason about the benefits and drawbacks of solution alternatives for a given implementation task.
- make apposite architectural choices.
- implement aspects of a modern data pipeline

Contents

- The second course of the Data Engineering elective revolves around the implementation of a data engineering project chosen from a set of project suggestions. Students can also contribute their own project ideas.

Big Data Technologies

Course Code: DLMDSBDT01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Data are often considered the “new oil”, the raw material from which value is created. To harness the power of data, the data need to be stored and processed on a technical level. This course introduces the four “Vs” of data, as well as typical data sources and types. This course then discusses how data are stored in databases. Particular focus is given to database structures and different types of databases, e.g., relational, noSQL, NewSQL, and time-series. Beyond classical and modern databases, this course covers a wide range of storage frameworks such as distributed filesystems, streaming, and query frameworks. This is complemented by a detailed discussion of data storage formats ranging from classical approaches such as CSV and HDF5 to more modern approaches like Apache Arrow and Parquet. Finally, this course gives an overview of distributed computing environments based on local clusters, cloud computing facilities, and container-based approaches.

Course Outcomes

On successful completion, students will be able to

- identify the different types and sources of data.
- understand different database concepts.
- build new database structures.
- evaluate various data storage frameworks w.r.t. project requirements.
- analyze which data format to use for a given project.
- create a distributed computing environment for a given project.

Contents

1. Data Types and Data Sources
 - 1.1 The 4Vs of data: volume, velocity, variety, veracity
 - 1.2 Data sources
 - 1.3 Data types
2. Databases
 - 2.1 Database structures
 - 2.2 Introduction to SQL
 - 2.3 Relational databases
 - 2.4 nonSQL, NewSQL databases
 - 2.5 Timeseries DB

3. Modern data storage frameworks
 - 3.1 Distributed Filesystems
 - 3.2 Streaming frameworks
 - 3.3 Query frameworks
4. Data formats
 - 4.1 Traditional data exchange formats
 - 4.2 Apache Arrow
 - 4.3 Apache Parquet
5. Distributed Computing
 - 5.1 Cluster-based approaches
 - 5.2 Containers
 - 5.3 Cloud-based approaches

Project: Big Data Technologies

Course Code: DLMBIEBDE01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDSBDT01

Course Description

The course is designed to give the students the opportunity to practice what they have learned and encounter a set of practical problems that are new for them. The goal is to implement an Apache Spark project with the learned knowledge.

Course Outcomes

On successful completion, students will be able to

- experience the learned big data technologies in a project.
- design a Big Data architecture based on given requirements and conditions.
- investigate and gather information from a variety of sources to build a Big Data application.
- apply appropriate techniques and methods to create an Apache Spark cluster.
- demonstrate meaningful use of technical skills by documentation.

Contents

- In this course, students will conduct and document a Big Data project using the topics covered in the previous course. They will explore and collect information from a variety of sources and design an application using Apache Spark. They will design the architecture and document the implementation of the application.

Module Contents

Data Utilization

- Pattern recognition
- Natural language processing
- Image recognition
- Detection and sensing
- Problem-solving
- Decision-making

Application Scenarios and Case Studies

- Agile development
- Workflow overview
- Fields of application
- Sprint Planning; Sprint
- Sprint Retrospective
- Committee presentation

Learning Outcomes

Data Utilization

On successful completion, students will be able to

- understand how identity, similarity, and diversity of data can be utilized in problem-solving approaches.
- differentiate between complicated and complex systems of investigation.
- identify the variability of a problem under investigation.
- distinguish between invariant and dynamic features of an investigated system.
- synthesize gained insights to propose a reliable data analytics solution.

Application Scenarios and Case Studies

On successful completion, students will be able to

- establish an application scenario for data science within a self-organized team.
- identify requirements and appropriate technologies for data collection.
- evaluate and select applicable technologies for data pre-processing and processing.
- assess challenges and risks of the selected approach.
- define clearly the outcome and value of the approach.
- elaborate a conceptual design document and presentation for decision-makers.

Data Utilization

Course Code: DLMBBD01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

The course Data Utilization introduces case-based applications that take advantage of regularities and patterns found within continuously generated texts, images, or sensor data. The cases solve issues of pattern recognition, natural language processing, image recognition, detection and sensing, problem-solving, and decision support. The cases are related to the application fields of cybersecurity, linguistics, augmented reality, intelligent transportation, problem-solving, and decision support.

Course Outcomes

On successful completion, students will be able to

- understand how identity, similarity, and diversity of data can be utilized in problem-solving approaches.
- differentiate between complicated and complex systems of investigation.
- identify the variability of a problem under investigation.
- distinguish between invariant and dynamic features of an investigated system.
- synthesize gained insights to propose a reliable data analytics solution.

Contents

1. Introduction
 - 1.1 The Meaning of Identity, Similarity, and Diversity
 - 1.2 Data Patterns and Ontologies
2. Pattern Recognition
 - 2.1 Analysis of User Interaction, Attitude, and Behavior
 - 2.2 Predictive Analytics
 - 2.3 Preventing the Unknown: User Behavior Analytics in Cybersecurity
3. Natural Language Processing
 - 3.1 Concepts of Natural Language
 - 3.2 Speech Recognition and Acoustic Modeling
 - 3.3 Discerning the Meaning: Linguistics and Social Media

4. Image Recognition
 - 4.1 Basics of Image Representation
 - 4.2 Integral Transforms and Compression
 - 4.3 Exploiting the Visual: Image Recognition for Augmented Reality
5. Detection and Sensing
 - 5.1 Sensor Construction and Techniques
 - 5.2 Intelligent Agents and Surveillance
 - 5.3 Managing the Complex: Sensor Networks in Intelligent Transportation Systems
6. Problem-solving
 - 6.1 Knowledge Sharing and the Cloud
 - 6.2 Rule-based Systems
 - 6.3 Learning from Nature: Expert Systems in Business
7. Decision Support
 - 7.1 Invariants, Determinants, and Alternatives in Decision-making
 - 7.2 Correlation and Causality in Strategic Decision-making
 - 7.3 Approaching the Crossroads: Dashboards and Visualization
8. Data Security and Data Protection
 - 8.1 Securing Data Storage and Processing Infrastructure Against Unauthorized Access
 - 8.2 Compliance and Regulations, GDPR

Application Scenarios and Case Studies

Course Code: DLMBBD02-01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMBBD01

Course Description

This course provides an opportunity for students to work on application scenarios for data science in selected industry sectors. This allows the students to combine the learning objectives from the other modules in a setting which closely resembles further work applications: Starting from the identification of suitable application areas, a specific use-case is selected and a set of metrics and/or KPIs is selected which can be used whether the case study is considered successful and leads to tangible benefit. A broad discussion on which data and type of data, as well as where to obtain, store, and process the data, allows students detailed insight into many practical issues that arise when dealing with data-driven projects, ranging from technical questions about infrastructure to data quality and relevant domain expertise. The actual work on the case study begins with the creation of a detailed project plan which defines objectives, means, and outcome. The plan is then implemented using an agile project management framework. The course closes with delivery of a design document and a final presentation in front of a committee of selected lecturers.

Course Outcomes

On successful completion, students will be able to

- establish an application scenario for data science within a self-organized team.
- identify requirements and appropriate technologies for data collection.
- evaluate and select applicable technologies for data pre-processing and processing.
- assess challenges and risks of the selected approach.
- define clearly the outcome and value of the approach.
- elaborate a conceptual design document and presentation for decision-makers.

Contents

1. Introduction to Agile Frameworks
 - 1.1 Scrum
 - 1.2 Kanban
 - 1.3 EduScrum
2. Fields of Application & Case Study Setup
 - 2.1 Overview of Fields of Application
 - 2.2 Definition of Success
 - 2.3 Selection of either of the fields (1 per team)

3. Data Sources
 - 3.1 Identifying Potential Internal and External Data Sources
 - 3.2 Identifying Potential Data Types and Data Processing Requirements
 - 3.3 Identifying Potential Data Quality Challenges
4. Case Study Work
 - 4.1 Creating a Project Plan
 - 4.2 Implementation of the Case Study Using the Agile Approach
5. Case Study Presentation
 - 5.1 Case Study Presentation: Approach and Key Findings
 - 5.2 Creation and Submission of Case Study Report

Leveraging Data Sources & Data Mining

Course Code: DLMDMEDM01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

This course provides an overview of data mining and its key aspects and methods. For this purpose, data mining processes, data retrieval strategies and data quality and preparation methods are introduced, the nature of data sources is learned, and some important data mining and web scraping techniques are discussed. In addition, the concepts of data economy and the legal requirements and usage guidelines associated with data mining are discussed.

Course Outcomes

On successful completion, students will be able to

- explain the main concepts of data mining.
- know different strategies of data retrieval, the techniques of data preparation and data quality assurance.
- comprehend the various types of data sources used in data mining.
- apply the main techniques of data and web mining.
- summarize the key players and components of data economy.
- describe the legal regulations and usage policies in data mining.

Contents

1. Data Mining Process
 - 1.1 Business Understanding
 - 1.2 Data Understanding
 - 1.3 Modeling
 - 1.4 Evaluation
 - 1.5 Deployment
2. Data Quality and Data Preparation
 - 2.1 Gathering Data
 - 2.2 Data Selection
 - 2.3 Data Cleansing
 - 2.4 Sparse Data and Missing Values
 - 2.5 Data Consistency

3. Data Retrieval Strategies
 - 3.1 Query Driven
 - 3.2 Mining Data Streams
 - 3.3 Large-Scale Data Mining
 - 3.4 Process Mining
 - 3.5 Information Extraction

4. Types of Data Sources
 - 4.1 APIs, Flat files and Unusual formats
 - 4.2 Relational Databases
 - 4.3 Non-relational Databases
 - 4.4 Streaming Data
 - 4.5 Open Data Sources

5. Data Mining Techniques
 - 5.1 Statistical Methods
 - 5.2 Machine Learning
 - 5.3 Data Warehousing
 - 5.4 Event Processing
 - 5.5 Real-time Processing

6. Web Mining
 - 6.1 Information Retrieval
 - 6.2 Web Content Mining
 - 6.3 Web Structure and Usage Mining
 - 6.4 Web Search and Spamdexing
 - 6.5 Access and Mine the Data Lake

7. Data Economy
 - 7.1 Data Producers and Aggregators
 - 7.2 Data Monetization
 - 7.3 Internet of Things
 - 7.4 Data Mining in Industry 4.0
 - 7.5 Big Data

8. Legal Regulations and Usage Policies
 - 8.1 General Data Protection Regulation
 - 8.2 Personal Information
 - 8.3 Legal Basis for Data Processing
 - 8.4 Data Protection and Transparency
 - 8.5 Copyright Compliance

Project: Leveraging Data Sources & Data Mining

Course Code: DLMDMEDM02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDMEDM01

Course Description

The focus of this course is to apply previously acquired data mining knowledge to a project implementation and reflect on the results. Students will carry out this project and document the results. In doing so, they reflect on the data mining concepts applied and the impact of these concepts on the success of the project.

Course Outcomes

On successful completion, students will be able to

- implement a data mining project using Python.
- practice and refine the learned knowledge.
- explore, transfer, convert and experiment with different types of data.
- evaluate the outcomes of the data mining project.
- demonstrate meaningful use of technical skills by documentation.
- present the major techniques of data mining and all related procedures.

Contents

- In this course, students conduct and document a data mining project using the topics covered in previous module using Python.

Module Contents

Digital Business Models

- History and success factors of digital business
- Trends in Digital Business
- Knowledge and evaluation of alternative business models in digital business
- Procedure for the development of strategic corporate positioning in digital business
- Knowledge of alternative financing models
- Goals and procedures for the creation of the business plan for digital business models

Innovation and Entrepreneurship

- Innovation management and entrepreneurship in a globalized world
- Basics of entrepreneurship
- Business ideas and company foundations
- Financing sources and processes
- Internet, digital business, and artificial intelligence
- Strategic alliances
- Family-owned companies

Learning Outcomes

Digital Business Models

On successful completion, students will be able to

- know the history and framework of digital business models.
- understand the basic principles of innovation management.
- know and understand different business models of the digital economy and be able to evaluate their advantages and disadvantages.
- understand the basics of strategic and operational business model planning in e-commerce.
- independently create a business plan for a digital business model.

Innovation and Entrepreneurship

On successful completion, students will be able to

- understand the importance, fundamentals, and dimensions of entrepreneurship and its derivatives (intrapreneurship, corporate entrepreneurship, stakeholder relationships, and family businesses).
- analyze the opportunities and challenges associated with evaluating a business idea and setting up a business.
- distinguish between the different motivations behind entrepreneurial activity and develop specific objectives for new enterprises.
- develop a business model, including benchmarks for assessing desired sustainable growth.
- apply different legal forms to business start-ups and select the appropriate legal form for a specific business model.
- understand the different ways in which entrepreneurship and innovation can be financed and weigh them against each other in terms of medium- and long-term advantages and disadvantages.
- develop a rigorous business plan that can be used both as a planning and financing instrument.
- apply, in principle, an entrepreneurial mindset in a variety of different contexts of future professional development.

Digital Business Models

Course Code: DLMIDBM01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

This course deals with IT-driven start-ups and business models. Based on the discussion of the historical development and framework conditions of digital business, alternative business models in digital business are systematically presented, analyzed and evaluated with regard to their respective strengths and weaknesses. Students study the central approaches to developing an independent corporate positioning and are enabled to autonomously examine and evaluate the central factors influencing corporate success in digital business. Further, alternative financing concepts for digital business models are presented and critically evaluated and the central components of a business plan are detailed. In addition, the entire process of creating and defining a business plan is presented in detail and tested using practical examples.

Course Outcomes

On successful completion, students will be able to

- know the history and framework of digital business models.
- understand the basic principles of innovation management.
- know and understand different business models of the digital economy and be able to evaluate their advantages and disadvantages.
- understand the basics of strategic and operational business model planning in e-commerce.
- independently create a business plan for a digital business model.

Contents

1. Innovation Management and Business Model Definitions
 - 1.1 Basic Concepts of Innovation Management Regarding Digital Business Models
 - 1.2 Business Models: Genesis - Definition - Relation to Innovation
 - 1.3 Specifics of Digital Business Models and Comparison to Traditional Approaches
2. Digital Business Models: Definition and Elements
 - 2.1 New Elements of Digital Business Models
 - 2.2 Redefinition and Core Elements of Digital Business Models
 - 2.3 Value Architecture and Value Mechanics

3. Basic Architectures, Standard Patterns and Network Integration
 - 3.1 Basic Digital Business Model Architectures
 - 3.2 Standard Patterns in Business Model Elements
 - 3.3 Networks and Differentiation Strategies
4. Success Factors and Strategy
 - 4.1 Relationships Between Business Model, Success Factors and Strategy
 - 4.2 Relevant Success Factors of Digital Business Models
 - 4.3 Strategy Levels and Strategy Examples in the Context of Digital Business Models and Their Elements
5. The Business Case and Special Features of Investment Planning
 - 5.1 Elements of the Business Case and Connection to Previous Concepts
 - 5.2 Revenue Mechanics, Revenue Planning and Performance Indicators
 - 5.3 Special Features of Investment Planning

Innovation and Entrepreneurship

Course Code: DLMBIE01-01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MBA	English		5	None

Course Description

In today's globalized and digital world, entrepreneurs have more opportunities to develop and market products and services than ever before. However, entrepreneurship, whether in the form of entrepreneurship or intrapreneurship, presents special challenges. In order to avoid the typical pitfalls of starting and growing a business, a sound understanding of innovation management and building a business is essential. Particular attention must be paid to the financing of entrepreneurial activity, both from the perspective of the entrepreneur and the investor. Innovation and entrepreneurial activity are the basis and driving force of our economy. Even looking at other economies, it is obvious that innovation and entrepreneurship are crucial at every stage of economic development. Small enterprises in developing countries initiate the development of economic institutions and create supply, demand, and markets. These enterprises lay the foundation for economic development and growth. In developed economies, innovation and entrepreneurship are the driving forces behind competition and competitiveness in the global context. In all parts of the world, family businesses play the most important role. The rapid technological and social change present in our societies requires the innovative use of digital technologies (internet and artificial intelligence), as well as flexibility in handling new forms of organization (e.g., strategic alliances between companies). This course introduces students to the ideas behind, motives, and drivers of entrepreneurial activity and innovation and teaches them the practical aspects of the identification, analysis, and development of innovations and business ideas. The core competence of the entrepreneur—the ability to negotiate with investors and partners—is also addressed.

Course Outcomes

On successful completion, students will be able to

- understand the importance, fundamentals, and dimensions of entrepreneurship and its derivatives (intrapreneurship, corporate entrepreneurship, stakeholder relationships, and family businesses).
- analyze the opportunities and challenges associated with evaluating a business idea and setting up a business.
- distinguish between the different motivations behind entrepreneurial activity and develop specific objectives for new enterprises.
- develop a business model, including benchmarks for assessing desired sustainable growth.
- apply different legal forms to business start-ups and select the appropriate legal form for a specific business model.
- understand the different ways in which entrepreneurship and innovation can be financed and weigh them against each other in terms of medium- and long-term advantages and disadvantages.
- develop a rigorous business plan that can be used both as a planning and financing instrument.
- apply, in principle, an entrepreneurial mindset in a variety of different contexts of future professional development.

Contents

1. Entrepreneurship
 - 1.1 Entrepreneurship and entrepreneur
 - 1.2 Enterprise related theories of entrepreneurship
 - 1.3 The economic significance of entrepreneurship
2. Company formation strategy
 - 2.1 Different contexts in which companies are founded
 - 2.2 The Entrepreneur
 - 2.3 Business models and strategies
3. Innovation and innovation management
 - 3.1 Innovation
 - 3.2 Innovation management
 - 3.3 Protection of intellectual property
 - 3.4 Case study: BMW Empathic Design
4. Legal form in international comparison
 - 4.1 Germany
 - 4.2 International comparison: USA

5. Financing entrepreneurial activity I: Sources of finance
 - 5.1 Incubators, accelerators and crowdfunding
 - 5.2 Business angels
 - 5.3 Private equity and corporate venture capital
 - 5.4 Public start-up support
6. Financing entrepreneurial activity II: Financing processes
 - 6.1 The investor view: Deal sourcing and deal screening
 - 6.2 The entrepreneurial view: Negotiations with investors
 - 6.3 The evaluation of business start-ups
7. The business plan
 - 7.1 Purpose and objectives of the business plan
 - 7.2 Expectations regarding the business plan
 - 7.3 Structure and content of the business plan
 - 7.4 Guidelines for creating a business plan
8. Digital business models and artificial intelligence
 - 8.1 e-Business
 - 8.2 Artificial intelligence
 - 8.3 The Globotics Evolution
9. Cooperative strategy: Alliances and joint ventures
 - 9.1 Cooperative strategy
 - 9.2 The right “fit”
 - 9.3 The right “form”
10. Family-owned company
 - 10.1 Definitions
 - 10.2 Economic significance
 - 10.3 Strengths and weaknesses

Online and Social Media Marketing

- Basics of Strategic Online Marketing
- Introduction to Basic Web Technologies
- The Online Marketing Mix
- Planning, Management and Control of Online Marketing
- Outlook and Discussion: The Future of Online Marketing

Digital Analytics and Strategies

- Basics of Digital Analytics
- Metrics of Digital Analytics
- Digital key performance indicators (KPIs) and their analysis
- Digital strategy development
- Further developments and perspectives of Digital Analytics

Learning Outcomes

Online and Social Media Marketing

On successful completion, students will be able to

- familiarize themselves with the general conditions of online and social media marketing.
- know the specifics of strategic online marketing and its importance for the success of online marketing campaigns.
- have a complete overview of the instruments of online and social media marketing, critically evaluate them and use them optimally in a goal-oriented manner.
- analyze user perception processes and critically assess, control and optimize the design of online marketing instruments.
- develop a strong awareness of the need to protect privacy when using new Internet technologies.
- familiarize themselves with the legal framework of online marketing and anticipate future developments.

Digital Analytics and Strategies

On successful completion, students will be able to

- understand the scope of digital analytics and define the field of web analytics including typical goals and application areas.
- understand, select and evaluate central data sources and metrics to analyze and interpret digital marketing data.
- independently plan and conduct web analyses, interpret the results, draw conclusions and discuss these.
- define key performance indicators (KPIs) of digital analytics and derive specific KPIs to answer potential questions.
- conceptually develop, evaluate and optimize a system to measure online performance indicators.
- analyze current or newly developed online strategies by looking at the customer journey and designing targeted measures to optimize the process especially at the contact points.
- evaluate, reflect and select new digital analysis approaches.

Online and Social Media Marketing

Course Code: DLMWOM01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

This course introduces both the conceptual foundations of strategic online and social media marketing and the structure, content and design options for the operational design of the respective online marketing instruments. In addition, the essential technical basics of the most common web technologies are deepened and approaches and instruments for managing, implementing and controlling the advertising impact of online media are presented. The legal framework for online and social media marketing will be considered, as well as an outlook and the discussion and initial assessment of future online developments and marketing trends.

Course Outcomes

On successful completion, students will be able to

- familiarize themselves with the general conditions of online and social media marketing.
- know the specifics of strategic online marketing and its importance for the success of online marketing campaigns.
- have a complete overview of the instruments of online and social media marketing, critically evaluate them and use them optimally in a goal-oriented manner.
- analyze user perception processes and critically assess, control and optimize the design of online marketing instruments.
- develop a strong awareness of the need to protect privacy when using new Internet technologies.
- familiarize themselves with the legal framework of online marketing and anticipate future developments.

Contents

1. Basics of Strategic Online Marketing
 - 1.1 Integrated Communication as the Basis for Success
 - 1.2 Internal and External Conditions of Online Marketing
 - 1.3 Situation and Environment Analysis
 - 1.4 Definition of Objectives of Online and Social Media Marketing in B2C and B2B Contexts
2. Introduction to Basic Web Technologies
 - 2.1 Web Basics
 - 2.2 Current Technologies and Trends

3. The Online Marketing Mix
 - 3.1 Fundamentals of Online Marketing Effects
 - 3.2 Overview of Classic Instruments of Online Marketing
 - 3.3 Mobile Marketing
 - 3.4 Social Media Marketing
 - 3.5 Assessment of Alternative Online Marketing Instruments Including Possible Applications and Limitations
 - 3.6 Integrated Online Marketing and Viral Campaigns
4. Planning, Management and Control of Online Marketing
 - 4.1 Planning of Online Marketing Instruments
 - 4.2 Essential Success Factors of Online Marketing
 - 4.3 Approaches and Instruments for Measuring the Success of Online and Social Media Activities
 - 4.4 Legal Framework for Online and Social Media Marketing
5. Outlook and Discussion: The Future of Online Marketing
 - 5.1 Current and Future Developments in Online Marketing

Digital Analytics and Strategies

Course Code: DLMMADAS01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Marketing has a wide range of online instruments and data at its disposal. However, due to the large number of information sources, it is a challenge to extract data, information and key figures based on their valuable contribution to online marketing strategies. Building on the theoretical foundations of suitable metrics to describe and analyze user behavior, key performance indicators (KPIs) are developed, discussed and reflected with regard to their relevance in online marketing. Subsequently, the acquired knowledge is transferred into online strategies, content marketing measures and online campaigns. The course concludes with the identification and discussion of further development possibilities and digital analytic trends in marketing.

Course Outcomes

On successful completion, students will be able to

- understand the scope of digital analytics and define the field of web analytics including typical goals and application areas.
- understand, select and evaluate central data sources and metrics to analyze and interpret digital marketing data.
- independently plan and conduct web analyses, interpret the results, draw conclusions and discuss these.
- define key performance indicators (KPIs) of digital analytics and derive specific KPIs to answer potential questions.
- conceptually develop, evaluate and optimize a system to measure online performance indicators.
- analyze current or newly developed online strategies by looking at the customer journey and designing targeted measures to optimize the process especially at the contact points.
- evaluate, reflect and select new digital analysis approaches.

Contents

1. Basics of Digital Analytics
 - 1.1 Introduction and Definition of Digital Analytics
 - 1.2 Goals of Digital Analytics
 - 1.3 Data and Information Sources
 - 1.4 Legal Framework

2. Metrics of Digital Analytics
 - 2.1 Fundamentals of Metrics
 - 2.2 Hits, Page Views, Visits and Visitors
 - 2.3 Other Metrics
 - 2.4 Limits of Metrics: Inaccuracies and Ambiguities
3. Digital Key Performance Indicators (KPIs) and Their Analysis
 - 3.1 Search Engine Marketing: Key Figures and Analytical Approaches
 - 3.2 Social Media: Monitoring and Analytical Approaches
 - 3.3 Website: Key Figures and Analytical Approaches
 - 3.4 Email: Key Figures and Analytical Approaches
4. Digital Strategy Development
 - 4.1 Fundamentals of the Customer Journey
 - 4.2 Derivation of Digital Marketing Goals Along the Customer Journey
 - 4.3 Application and Design Possibilities for Digital and Mobile Campaigns
 - 4.4 Application and Design Possibilities for Content Marketing
 - 4.5 Monitoring The Implementation of Strategies and Measures
5. Further Developments and Perspectives of Digital Analytics

Digital Business Models

Course Code: DLMIDBM01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

This course deals with IT-driven start-ups and business models. Based on the discussion of the historical development and framework conditions of digital business, alternative business models in digital business are systematically presented, analyzed and evaluated with regard to their respective strengths and weaknesses. Students study the central approaches to developing an independent corporate positioning and are enabled to autonomously examine and evaluate the central factors influencing corporate success in digital business. Further, alternative financing concepts for digital business models are presented and critically evaluated and the central components of a business plan are detailed. In addition, the entire process of creating and defining a business plan is presented in detail and tested using practical examples.

Course Outcomes

On successful completion, students will be able to

- know the history and framework of digital business models.
- understand the basic principles of innovation management.
- know and understand different business models of the digital economy and be able to evaluate their advantages and disadvantages.
- understand the basics of strategic and operational business model planning in e-commerce.
- independently create a business plan for a digital business model.

Contents

1. Innovation Management and Business Model Definitions
 - 1.1 Basic Concepts of Innovation Management Regarding Digital Business Models
 - 1.2 Business Models: Genesis - Definition - Relation to Innovation
 - 1.3 Specifics of Digital Business Models and Comparison to Traditional Approaches
2. Digital Business Models: Definition and Elements
 - 2.1 New Elements of Digital Business Models
 - 2.2 Redefinition and Core Elements of Digital Business Models
 - 2.3 Value Architecture and Value Mechanics

3. Basic Architectures, Standard Patterns and Network Integration
 - 3.1 Basic Digital Business Model Architectures
 - 3.2 Standard Patterns in Business Model Elements
 - 3.3 Networks and Differentiation Strategies
4. Success Factors and Strategy
 - 4.1 Relationships Between Business Model, Success Factors and Strategy
 - 4.2 Relevant Success Factors of Digital Business Models
 - 4.3 Strategy Levels and Strategy Examples in the Context of Digital Business Models and Their Elements
5. The Business Case and Special Features of Investment Planning
 - 5.1 Elements of the Business Case and Connection to Previous Concepts
 - 5.2 Revenue Mechanics, Revenue Planning and Performance Indicators
 - 5.3 Special Features of Investment Planning

IT Project and Change Management

Course Code: DLMIPC01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	None

Course Description

In this course, students learn about the term change management and its connection with IT projects. They will also learn about success factors and how communication management can be used to support change processes in a targeted manner. Furthermore, they will learn what change management means in the context of IT service management and how IT projects and IT architectures can be specifically designed regarding continuous adaptation.

Course Outcomes

On successful completion, students will be able to

- explain the term change management and how change management and IT projects are related to each other.
- explain success factors in change management and demonstrate how targeted communication management can be done.
- explain the term change management in the context of IT service management and explain how change management can be organized in a structured manner there.
- assess how IT projects and IT architectures can be prepared for continuous change and with which concrete management techniques the ability to change is made possible.

Contents

1. Change Management
 - 1.1 Introduction and Examples
 - 1.2 Definition: Change Management
 - 1.3 Relationships between Change and IT Project Management
 - 1.4 Areas of Influence of IT Projects on Companies

2. Supporting Methods for Change Management
 - 2.1 Introduction
 - 2.2 Rapid Prototyping
 - 2.3 Agility and Change
 - 2.4 Complexity and Change
 - 2.5 The Process Logic of the Tetralemma and Change
 - 2.6 Knowledge Management and Change
 - 2.7 Typology in the Company
 - 2.8 Systemic Structural Constellations and Change
3. Success Factors for Change Management
 - 3.1 Introduction
 - 3.2 Governance
 - 3.3 Holism
 - 3.4 Participation
 - 3.5 Respect and Appreciation
 - 3.6 Visions
 - 3.7 Amplification and Storytelling
4. Communication Management
 - 4.1 Introduction and Basics about Communication
 - 4.2 Communication Design

IT Project Management

Course Code: DLMBITPAM01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

The purpose of this course is to introduce students to the concepts involved in IT project management. This is achieved through the development of an understanding of the fundamental tenets of project management enhancing the students' ability to apply their knowledge, skills and competencies in analyzing and solving IT project management problems. A special focus is put on the specifics of IT project organization, cost management and the human factor within IT projects.

Course Outcomes

On successful completion, students will be able to

- critically reflect the status of knowledge on IT project management.
- set up different IT project management formats (small, medium and large projects) and know the methods for managing these different IT projects professionally.
- develop an IT management proposal as the fundament of a professional IT project management concept.
- understand and integrate different IT management project plans (e.g., time plan, cost plan, resources plan, risk plan) and use those plans in an integrative IT project planning and controlling scheme.
- organize and to lead an IT project team and its core and/or extended team members.

Contents

1. Introduction: Characteristics of IT Projects
 - 1.1 Defining IT Projects
 - 1.2 Overview on Typical Roles and Phases of IT Projects
 - 1.3 Risks and Challenges of IT Projects
 - 1.4 Role of an IT Project Manager
2. Organizing the Work
 - 2.1 Project Breakdown Structure, Work Packages
 - 2.2 Prioritization
 - 2.3 Time Planning, Milestones, Gantt-Diagram
 - 2.4 Definition of Done

3.	Cost Estimation and Controlling
3.1	Challenges of Cost Estimation in IT Projects
3.2	Estimation Techniques: 3-Point Estimation, Double Blind Expert Estimation, Function Points
3.3	Cost Controlling Using Earned Value Analysis
3.4	Risk Management
4.	The Human Factor
4.1	Vision Keeping
4.2	Stakeholder Management
4.3	Conflict Management
5.	Organizing Small and Medium Projects
5.1	Rational Unified Process (RUP)
5.2	Agile Software Processes
5.3	Scrum
5.4	Plan-driven Project Management in Small Projects
6.	Organizing Large Projects
6.1	PMBOK Guide
6.2	Prince2
6.3	Multi Project Management
6.4	Agile Software Processes in Large Projects
6.5	Selection of the Appropriate Project Management Method

Project: Technical Project Planning

Course Code: DLMDSETPL01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMBITPAM01

Course Description

The focus of this course is to apply the project management knowledge gained previously in a practical portfolio project and reflect on the results. Students engage in this portfolio project and document the results, reflecting on the project management concepts they apply and the influence of these concepts on the success of the project.

Course Outcomes

On successful completion, students will be able to

- apply the concepts of project management to real-world tasks and problems.
- translate the learned theories into the practice of project management.
- analyze a real-world problem and define and implement a project to resolve it.
- appraise the results of a project performed and identify what worked well and what did not.
- explain the work they perform, give its scientific background, and produce adequate documentation.

Contents

- In this course, students perform and document a portfolio project in which they apply the project management topics covered in previous modules.

Data Engineering

- Study Format "Distance Learning": Oral Assignment

Project: Data Engineering

- Study Format "Fernstudium": Portfolio

Weight of Module

see curriculum

Module Contents

Data Engineering

- Principles of data engineering
- Paradigms for data processing at scale
- Overview on data governance, security, and protection
- Common cloud platforms
- DataOps approach

Project: Data Engineering

- Knowledge transfer and application to practical problems
- Implementation of a data infrastructure building block

Learning Outcomes

Data Engineering

On successful completion, students will be able to

- understand the foundational concepts in data engineering.
- categorize important data-processing classes.
- summarize common approaches to data governance and security.
- compare different common public cloud offerings.
- recognize current approaches to data operations (DataOps).

Project: Data Engineering

On successful completion, students will be able to

- apply the principles of data engineering to a practical application.
- analyze data engineering approaches with respect to a given project task.
- reason about the benefits and drawbacks of solution alternatives for a given implementation task.
- make apposite architectural choices.
- implement aspects of a modern data pipeline

Data Engineering

Course Code: DLMDSEDE01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

The focus of this first course in the Data Engineering elective module is to introduce students to important principles, concepts, methods and approaches in this subject domain. In order to achieve this goal, the course moves from an exposition of the foundational principles of data engineering to a thorough treatment of the core data processing classes. Modern architectural paradigms such as Microservices are explained, and important factors in data governance and protection are addressed. Aspects of cloud computing are introduced via an overview of the most common offerings on the market. Finally, a state-of-the-art agile perspective on the operation of data pipelines is given by an exposition to the emerging notion of DataOps.

Course Outcomes

On successful completion, students will be able to

- understand the foundational concepts in data engineering.
- categorize important data-processing classes.
- summarize common approaches to data governance and security.
- compare different common public cloud offerings.
- recognize current approaches to data operations (DataOps).

Contents

1. Foundations of Data Systems
 - 1.1 Reliability
 - 1.2 Scalability
 - 1.3 Maintainability
2. Data Processing at Scale
 - 2.1 Batch Processing
 - 2.2 Stream and Complex Event Processing
3. Microservices
 - 3.1 Introduction to Microservices
 - 3.2 Implementing Microservices

4. Governance & Security
 - 4.1 Data Protection
 - 4.2 Data Security
 - 4.3 Data Governance
5. Common Cloud Platforms & Services
 - 5.1 Amazon AWS
 - 5.2 Google Cloud
 - 5.3 Microsoft Azure
6. Data Ops
 - 6.1 Defining Principles
 - 6.2 Containerization
 - 6.3 Building Data Pipelines

Project: Data Engineering

Course Code: DLMDSEDE02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDSEDE01

Course Description

The second course of the Data Engineering elective module builds upon theoretical and methodological insights from the first course. It provides opportunities for students to put their newly-acquired knowledge into practical application by completing a data engineering project. In order to find an appropriate and viable approach, students will have to reason about and evaluate the benefits and drawbacks of possible architectural choices. Once an informed decision has been met, the chosen approach is implemented as a running piece of data infrastructure.

Course Outcomes

On successful completion, students will be able to

- apply the principles of data engineering to a practical application.
- analyze data engineering approaches with respect to a given project task.
- reason about the benefits and drawbacks of solution alternatives for a given implementation task.
- make apposite architectural choices.
- implement aspects of a modern data pipeline

Contents

- The second course of the Data Engineering elective revolves around the implementation of a data engineering project chosen from a set of project suggestions. Students can also contribute their own project ideas.

Big Data Technologies

Course Code: DLMDSBDT01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Data are often considered the “new oil”, the raw material from which value is created. To harness the power of data, the data need to be stored and processed on a technical level. This course introduces the four “Vs” of data, as well as typical data sources and types. This course then discusses how data are stored in databases. Particular focus is given to database structures and different types of databases, e.g., relational, noSQL, NewSQL, and time-series. Beyond classical and modern databases, this course covers a wide range of storage frameworks such as distributed filesystems, streaming, and query frameworks. This is complemented by a detailed discussion of data storage formats ranging from classical approaches such as CSV and HDF5 to more modern approaches like Apache Arrow and Parquet. Finally, this course gives an overview of distributed computing environments based on local clusters, cloud computing facilities, and container-based approaches.

Course Outcomes

On successful completion, students will be able to

- identify the different types and sources of data.
- understand different database concepts.
- build new database structures.
- evaluate various data storage frameworks w.r.t. project requirements.
- analyze which data format to use for a given project.
- create a distributed computing environment for a given project.

Contents

1. Data Types and Data Sources
 - 1.1 The 4Vs of data: volume, velocity, variety, veracity
 - 1.2 Data sources
 - 1.3 Data types
2. Databases
 - 2.1 Database structures
 - 2.2 Introduction to SQL
 - 2.3 Relational databases
 - 2.4 nonSQL, NewSQL databases
 - 2.5 Timeseries DB

3. Modern data storage frameworks
 - 3.1 Distributed Filesystems
 - 3.2 Streaming frameworks
 - 3.3 Query frameworks
4. Data formats
 - 4.1 Traditional data exchange formats
 - 4.2 Apache Arrow
 - 4.3 Apache Parquet
5. Distributed Computing
 - 5.1 Cluster-based approaches
 - 5.2 Containers
 - 5.3 Cloud-based approaches

Project: Big Data Technologies

Course Code: DLMBIEBDE01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDSBDT01

Course Description

The course is designed to give the students the opportunity to practice what they have learned and encounter a set of practical problems that are new for them. The goal is to implement an Apache Spark project with the learned knowledge.

Course Outcomes

On successful completion, students will be able to

- experience the learned big data technologies in a project.
- design a Big Data architecture based on given requirements and conditions.
- investigate and gather information from a variety of sources to build a Big Data application.
- apply appropriate techniques and methods to create an Apache Spark cluster.
- demonstrate meaningful use of technical skills by documentation.

Contents

- In this course, students will conduct and document a Big Data project using the topics covered in the previous course. They will explore and collect information from a variety of sources and design an application using Apache Spark. They will design the architecture and document the implementation of the application.

Data Utilization

Course Code: DLMBBD01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

The course Data Utilization introduces case-based applications that take advantage of regularities and patterns found within continuously generated texts, images, or sensor data. The cases solve issues of pattern recognition, natural language processing, image recognition, detection and sensing, problem-solving, and decision support. The cases are related to the application fields of cybersecurity, linguistics, augmented reality, intelligent transportation, problem-solving, and decision support.

Course Outcomes

On successful completion, students will be able to

- understand how identity, similarity, and diversity of data can be utilized in problem-solving approaches.
- differentiate between complicated and complex systems of investigation.
- identify the variability of a problem under investigation.
- distinguish between invariant and dynamic features of an investigated system.
- synthesize gained insights to propose a reliable data analytics solution.

Contents

1. Introduction
 - 1.1 The Meaning of Identity, Similarity, and Diversity
 - 1.2 Data Patterns and Ontologies
2. Pattern Recognition
 - 2.1 Analysis of User Interaction, Attitude, and Behavior
 - 2.2 Predictive Analytics
 - 2.3 Preventing the Unknown: User Behavior Analytics in Cybersecurity
3. Natural Language Processing
 - 3.1 Concepts of Natural Language
 - 3.2 Speech Recognition and Acoustic Modeling
 - 3.3 Discerning the Meaning: Linguistics and Social Media

4. Image Recognition
 - 4.1 Basics of Image Representation
 - 4.2 Integral Transforms and Compression
 - 4.3 Exploiting the Visual: Image Recognition for Augmented Reality
5. Detection and Sensing
 - 5.1 Sensor Construction and Techniques
 - 5.2 Intelligent Agents and Surveillance
 - 5.3 Managing the Complex: Sensor Networks in Intelligent Transportation Systems
6. Problem-solving
 - 6.1 Knowledge Sharing and the Cloud
 - 6.2 Rule-based Systems
 - 6.3 Learning from Nature: Expert Systems in Business
7. Decision Support
 - 7.1 Invariants, Determinants, and Alternatives in Decision-making
 - 7.2 Correlation and Causality in Strategic Decision-making
 - 7.3 Approaching the Crossroads: Dashboards and Visualization
8. Data Security and Data Protection
 - 8.1 Securing Data Storage and Processing Infrastructure Against Unauthorized Access
 - 8.2 Compliance and Regulations, GDPR

Application Scenarios and Case Studies

Course Code: DLMBBD02-01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMBBD01

Course Description

This course provides an opportunity for students to work on application scenarios for data science in selected industry sectors. This allows the students to combine the learning objectives from the other modules in a setting which closely resembles further work applications: Starting from the identification of suitable application areas, a specific use-case is selected and a set of metrics and/or KPIs is selected which can be used whether the case study is considered successful and leads to tangible benefit. A broad discussion on which data and type of data, as well as where to obtain, store, and process the data, allows students detailed insight into many practical issues that arise when dealing with data-driven projects, ranging from technical questions about infrastructure to data quality and relevant domain expertise. The actual work on the case study begins with the creation of a detailed project plan which defines objectives, means, and outcome. The plan is then implemented using an agile project management framework. The course closes with delivery of a design document and a final presentation in front of a committee of selected lecturers.

Course Outcomes

On successful completion, students will be able to

- establish an application scenario for data science within a self-organized team.
- identify requirements and appropriate technologies for data collection.
- evaluate and select applicable technologies for data pre-processing and processing.
- assess challenges and risks of the selected approach.
- define clearly the outcome and value of the approach.
- elaborate a conceptual design document and presentation for decision-makers.

Contents

1. Introduction to Agile Frameworks
 - 1.1 Scrum
 - 1.2 Kanban
 - 1.3 EduScrum
2. Fields of Application & Case Study Setup
 - 2.1 Overview of Fields of Application
 - 2.2 Definition of Success
 - 2.3 Selection of either of the fields (1 per team)

3. Data Sources
 - 3.1 Identifying Potential Internal and External Data Sources
 - 3.2 Identifying Potential Data Types and Data Processing Requirements
 - 3.3 Identifying Potential Data Quality Challenges
4. Case Study Work
 - 4.1 Creating a Project Plan
 - 4.2 Implementation of the Case Study Using the Agile Approach
5. Case Study Presentation
 - 5.1 Case Study Presentation: Approach and Key Findings
 - 5.2 Creation and Submission of Case Study Report

Leveraging Data Sources & Data Mining

Course Code: DLMDMEDM01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

This course provides an overview of data mining and its key aspects and methods. For this purpose, data mining processes, data retrieval strategies and data quality and preparation methods are introduced, the nature of data sources is learned, and some important data mining and web scraping techniques are discussed. In addition, the concepts of data economy and the legal requirements and usage guidelines associated with data mining are discussed.

Course Outcomes

On successful completion, students will be able to

- explain the main concepts of data mining.
- know different strategies of data retrieval, the techniques of data preparation and data quality assurance.
- comprehend the various types of data sources used in data mining.
- apply the main techniques of data and web mining.
- summarize the key players and components of data economy.
- describe the legal regulations and usage policies in data mining.

Contents

1. Data Mining Process
 - 1.1 Business Understanding
 - 1.2 Data Understanding
 - 1.3 Modeling
 - 1.4 Evaluation
 - 1.5 Deployment
2. Data Quality and Data Preparation
 - 2.1 Gathering Data
 - 2.2 Data Selection
 - 2.3 Data Cleansing
 - 2.4 Sparse Data and Missing Values
 - 2.5 Data Consistency

3. Data Retrieval Strategies
 - 3.1 Query Driven
 - 3.2 Mining Data Streams
 - 3.3 Large-Scale Data Mining
 - 3.4 Process Mining
 - 3.5 Information Extraction
4. Types of Data Sources
 - 4.1 APIs, Flat files and Unusual formats
 - 4.2 Relational Databases
 - 4.3 Non-relational Databases
 - 4.4 Streaming Data
 - 4.5 Open Data Sources
5. Data Mining Techniques
 - 5.1 Statistical Methods
 - 5.2 Machine Learning
 - 5.3 Data Warehousing
 - 5.4 Event Processing
 - 5.5 Real-time Processing
6. Web Mining
 - 6.1 Information Retrieval
 - 6.2 Web Content Mining
 - 6.3 Web Structure and Usage Mining
 - 6.4 Web Search and Spamdexing
 - 6.5 Access and Mine the Data Lake
7. Data Economy
 - 7.1 Data Producers and Aggregators
 - 7.2 Data Monetization
 - 7.3 Internet of Things
 - 7.4 Data Mining in Industry 4.0
 - 7.5 Big Data

8. Legal Regulations and Usage Policies
 - 8.1 General Data Protection Regulation
 - 8.2 Personal Information
 - 8.3 Legal Basis for Data Processing
 - 8.4 Data Protection and Transparency
 - 8.5 Copyright Compliance

Project: Leveraging Data Sources & Data Mining

Course Code: DLMDMEDM02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDMEDM01

Course Description

The focus of this course is to apply previously acquired data mining knowledge to a project implementation and reflect on the results. Students will carry out this project and document the results. In doing so, they reflect on the data mining concepts applied and the impact of these concepts on the success of the project.

Course Outcomes

On successful completion, students will be able to

- implement a data mining project using Python.
- practice and refine the learned knowledge.
- explore, transfer, convert and experiment with different types of data.
- evaluate the outcomes of the data mining project.
- demonstrate meaningful use of technical skills by documentation.
- present the major techniques of data mining and all related procedures.

Contents

- In this course, students conduct and document a data mining project using the topics covered in previous module using Python.

Module Contents

Digital Business Models

- History and success factors of digital business
- Trends in Digital Business
- Knowledge and evaluation of alternative business models in digital business
- Procedure for the development of strategic corporate positioning in digital business
- Knowledge of alternative financing models
- Goals and procedures for the creation of the business plan for digital business models

Innovation and Entrepreneurship

- Innovation management and entrepreneurship in a globalized world
- Basics of entrepreneurship
- Business ideas and company foundations
- Financing sources and processes
- Internet, digital business, and artificial intelligence
- Strategic alliances
- Family-owned companies

Learning Outcomes**Digital Business Models**

On successful completion, students will be able to

- know the history and framework of digital business models.
- understand the basic principles of innovation management.
- know and understand different business models of the digital economy and be able to evaluate their advantages and disadvantages.
- understand the basics of strategic and operational business model planning in e-commerce.
- independently create a business plan for a digital business model.

Innovation and Entrepreneurship

On successful completion, students will be able to

- understand the importance, fundamentals, and dimensions of entrepreneurship and its derivatives (intrapreneurship, corporate entrepreneurship, stakeholder relationships, and family businesses).
- analyze the opportunities and challenges associated with evaluating a business idea and setting up a business.
- distinguish between the different motivations behind entrepreneurial activity and develop specific objectives for new enterprises.
- develop a business model, including benchmarks for assessing desired sustainable growth.
- apply different legal forms to business start-ups and select the appropriate legal form for a specific business model.
- understand the different ways in which entrepreneurship and innovation can be financed and weigh them against each other in terms of medium- and long-term advantages and disadvantages.
- develop a rigorous business plan that can be used both as a planning and financing instrument.
- apply, in principle, an entrepreneurial mindset in a variety of different contexts of future professional development.

Digital Business Models

Course Code: DLMIDBM01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

This course deals with IT-driven start-ups and business models. Based on the discussion of the historical development and framework conditions of digital business, alternative business models in digital business are systematically presented, analyzed and evaluated with regard to their respective strengths and weaknesses. Students study the central approaches to developing an independent corporate positioning and are enabled to autonomously examine and evaluate the central factors influencing corporate success in digital business. Further, alternative financing concepts for digital business models are presented and critically evaluated and the central components of a business plan are detailed. In addition, the entire process of creating and defining a business plan is presented in detail and tested using practical examples.

Course Outcomes

On successful completion, students will be able to

- know the history and framework of digital business models.
- understand the basic principles of innovation management.
- know and understand different business models of the digital economy and be able to evaluate their advantages and disadvantages.
- understand the basics of strategic and operational business model planning in e-commerce.
- independently create a business plan for a digital business model.

Contents

1. Innovation Management and Business Model Definitions
 - 1.1 Basic Concepts of Innovation Management Regarding Digital Business Models
 - 1.2 Business Models: Genesis - Definition - Relation to Innovation
 - 1.3 Specifics of Digital Business Models and Comparison to Traditional Approaches
2. Digital Business Models: Definition and Elements
 - 2.1 New Elements of Digital Business Models
 - 2.2 Redefinition and Core Elements of Digital Business Models
 - 2.3 Value Architecture and Value Mechanics

3. Basic Architectures, Standard Patterns and Network Integration
 - 3.1 Basic Digital Business Model Architectures
 - 3.2 Standard Patterns in Business Model Elements
 - 3.3 Networks and Differentiation Strategies
4. Success Factors and Strategy
 - 4.1 Relationships Between Business Model, Success Factors and Strategy
 - 4.2 Relevant Success Factors of Digital Business Models
 - 4.3 Strategy Levels and Strategy Examples in the Context of Digital Business Models and Their Elements
5. The Business Case and Special Features of Investment Planning
 - 5.1 Elements of the Business Case and Connection to Previous Concepts
 - 5.2 Revenue Mechanics, Revenue Planning and Performance Indicators
 - 5.3 Special Features of Investment Planning

Innovation and Entrepreneurship

Course Code: DLMBIE01-01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MBA	English		5	None

Course Description

In today's globalized and digital world, entrepreneurs have more opportunities to develop and market products and services than ever before. However, entrepreneurship, whether in the form of entrepreneurship or intrapreneurship, presents special challenges. In order to avoid the typical pitfalls of starting and growing a business, a sound understanding of innovation management and building a business is essential. Particular attention must be paid to the financing of entrepreneurial activity, both from the perspective of the entrepreneur and the investor. Innovation and entrepreneurial activity are the basis and driving force of our economy. Even looking at other economies, it is obvious that innovation and entrepreneurship are crucial at every stage of economic development. Small enterprises in developing countries initiate the development of economic institutions and create supply, demand, and markets. These enterprises lay the foundation for economic development and growth. In developed economies, innovation and entrepreneurship are the driving forces behind competition and competitiveness in the global context. In all parts of the world, family businesses play the most important role. The rapid technological and social change present in our societies requires the innovative use of digital technologies (internet and artificial intelligence), as well as flexibility in handling new forms of organization (e.g., strategic alliances between companies). This course introduces students to the ideas behind, motives, and drivers of entrepreneurial activity and innovation and teaches them the practical aspects of the identification, analysis, and development of innovations and business ideas. The core competence of the entrepreneur—the ability to negotiate with investors and partners—is also addressed.

Course Outcomes

On successful completion, students will be able to

- understand the importance, fundamentals, and dimensions of entrepreneurship and its derivatives (intrapreneurship, corporate entrepreneurship, stakeholder relationships, and family businesses).
- analyze the opportunities and challenges associated with evaluating a business idea and setting up a business.
- distinguish between the different motivations behind entrepreneurial activity and develop specific objectives for new enterprises.
- develop a business model, including benchmarks for assessing desired sustainable growth.
- apply different legal forms to business start-ups and select the appropriate legal form for a specific business model.
- understand the different ways in which entrepreneurship and innovation can be financed and weigh them against each other in terms of medium- and long-term advantages and disadvantages.
- develop a rigorous business plan that can be used both as a planning and financing instrument.
- apply, in principle, an entrepreneurial mindset in a variety of different contexts of future professional development.

Contents

1. Entrepreneurship
 - 1.1 Entrepreneurship and entrepreneur
 - 1.2 Enterprise related theories of entrepreneurship
 - 1.3 The economic significance of entrepreneurship
2. Company formation strategy
 - 2.1 Different contexts in which companies are founded
 - 2.2 The Entrepreneur
 - 2.3 Business models and strategies
3. Innovation and innovation management
 - 3.1 Innovation
 - 3.2 Innovation management
 - 3.3 Protection of intellectual property
 - 3.4 Case study: BMW Empathic Design
4. Legal form in international comparison
 - 4.1 Germany
 - 4.2 International comparison: USA

5. Financing entrepreneurial activity I: Sources of finance
 - 5.1 Incubators, accelerators and crowdfunding
 - 5.2 Business angels
 - 5.3 Private equity and corporate venture capital
 - 5.4 Public start-up support
6. Financing entrepreneurial activity II: Financing processes
 - 6.1 The investor view: Deal sourcing and deal screening
 - 6.2 The entrepreneurial view: Negotiations with investors
 - 6.3 The evaluation of business start-ups
7. The business plan
 - 7.1 Purpose and objectives of the business plan
 - 7.2 Expectations regarding the business plan
 - 7.3 Structure and content of the business plan
 - 7.4 Guidelines for creating a business plan
8. Digital business models and artificial intelligence
 - 8.1 e-Business
 - 8.2 Artificial intelligence
 - 8.3 The Globotics Evolution
9. Cooperative strategy: Alliances and joint ventures
 - 9.1 Cooperative strategy
 - 9.2 The right “fit”
 - 9.3 The right “form”
10. Family-owned company
 - 10.1 Definitions
 - 10.2 Economic significance
 - 10.3 Strengths and weaknesses

Module Contents

Online and Social Media Marketing

- Basics of Strategic Online Marketing
- Introduction to Basic Web Technologies
- The Online Marketing Mix
- Planning, Management and Control of Online Marketing
- Outlook and Discussion: The Future of Online Marketing

Digital Analytics and Strategies

- Basics of Digital Analytics
- Metrics of Digital Analytics
- Digital key performance indicators (KPIs) and their analysis
- Digital strategy development
- Further developments and perspectives of Digital Analytics

Learning Outcomes

Online and Social Media Marketing

On successful completion, students will be able to

- familiarize themselves with the general conditions of online and social media marketing.
- know the specifics of strategic online marketing and its importance for the success of online marketing campaigns.
- have a complete overview of the instruments of online and social media marketing, critically evaluate them and use them optimally in a goal-oriented manner.
- analyze user perception processes and critically assess, control and optimize the design of online marketing instruments.
- develop a strong awareness of the need to protect privacy when using new Internet technologies.
- familiarize themselves with the legal framework of online marketing and anticipate future developments.

Digital Analytics and Strategies

On successful completion, students will be able to

- understand the scope of digital analytics and define the field of web analytics including typical goals and application areas.
- understand, select and evaluate central data sources and metrics to analyze and interpret digital marketing data.
- independently plan and conduct web analyses, interpret the results, draw conclusions and discuss these.
- define key performance indicators (KPIs) of digital analytics and derive specific KPIs to answer potential questions.
- conceptually develop, evaluate and optimize a system to measure online performance indicators.
- analyze current or newly developed online strategies by looking at the customer journey and designing targeted measures to optimize the process especially at the contact points.
- evaluate, reflect and select new digital analysis approaches.

Online and Social Media Marketing

Course Code: DLMWOM01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

This course introduces both the conceptual foundations of strategic online and social media marketing and the structure, content and design options for the operational design of the respective online marketing instruments. In addition, the essential technical basics of the most common web technologies are deepened and approaches and instruments for managing, implementing and controlling the advertising impact of online media are presented. The legal framework for online and social media marketing will be considered, as well as an outlook and the discussion and initial assessment of future online developments and marketing trends.

Course Outcomes

On successful completion, students will be able to

- familiarize themselves with the general conditions of online and social media marketing.
- know the specifics of strategic online marketing and its importance for the success of online marketing campaigns.
- have a complete overview of the instruments of online and social media marketing, critically evaluate them and use them optimally in a goal-oriented manner.
- analyze user perception processes and critically assess, control and optimize the design of online marketing instruments.
- develop a strong awareness of the need to protect privacy when using new Internet technologies.
- familiarize themselves with the legal framework of online marketing and anticipate future developments.

Contents

1. Basics of Strategic Online Marketing
 - 1.1 Integrated Communication as the Basis for Success
 - 1.2 Internal and External Conditions of Online Marketing
 - 1.3 Situation and Environment Analysis
 - 1.4 Definition of Objectives of Online and Social Media Marketing in B2C and B2B Contexts
2. Introduction to Basic Web Technologies
 - 2.1 Web Basics
 - 2.2 Current Technologies and Trends

3. The Online Marketing Mix
 - 3.1 Fundamentals of Online Marketing Effects
 - 3.2 Overview of Classic Instruments of Online Marketing
 - 3.3 Mobile Marketing
 - 3.4 Social Media Marketing
 - 3.5 Assessment of Alternative Online Marketing Instruments Including Possible Applications and Limitations
 - 3.6 Integrated Online Marketing and Viral Campaigns
4. Planning, Management and Control of Online Marketing
 - 4.1 Planning of Online Marketing Instruments
 - 4.2 Essential Success Factors of Online Marketing
 - 4.3 Approaches and Instruments for Measuring the Success of Online and Social Media Activities
 - 4.4 Legal Framework for Online and Social Media Marketing
5. Outlook and Discussion: The Future of Online Marketing
 - 5.1 Current and Future Developments in Online Marketing

Digital Analytics and Strategies

Course Code: DLMMADAS01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Marketing has a wide range of online instruments and data at its disposal. However, due to the large number of information sources, it is a challenge to extract data, information and key figures based on their valuable contribution to online marketing strategies. Building on the theoretical foundations of suitable metrics to describe and analyze user behavior, key performance indicators (KPIs) are developed, discussed and reflected with regard to their relevance in online marketing. Subsequently, the acquired knowledge is transferred into online strategies, content marketing measures and online campaigns. The course concludes with the identification and discussion of further development possibilities and digital analytic trends in marketing.

Course Outcomes

On successful completion, students will be able to

- understand the scope of digital analytics and define the field of web analytics including typical goals and application areas.
- understand, select and evaluate central data sources and metrics to analyze and interpret digital marketing data.
- independently plan and conduct web analyses, interpret the results, draw conclusions and discuss these.
- define key performance indicators (KPIs) of digital analytics and derive specific KPIs to answer potential questions.
- conceptually develop, evaluate and optimize a system to measure online performance indicators.
- analyze current or newly developed online strategies by looking at the customer journey and designing targeted measures to optimize the process especially at the contact points.
- evaluate, reflect and select new digital analysis approaches.

Contents

1. Basics of Digital Analytics
 - 1.1 Introduction and Definition of Digital Analytics
 - 1.2 Goals of Digital Analytics
 - 1.3 Data and Information Sources
 - 1.4 Legal Framework

2. Metrics of Digital Analytics
 - 2.1 Fundamentals of Metrics
 - 2.2 Hits, Page Views, Visits and Visitors
 - 2.3 Other Metrics
 - 2.4 Limits of Metrics: Inaccuracies and Ambiguities
3. Digital Key Performance Indicators (KPIs) and Their Analysis
 - 3.1 Search Engine Marketing: Key Figures and Analytical Approaches
 - 3.2 Social Media: Monitoring and Analytical Approaches
 - 3.3 Website: Key Figures and Analytical Approaches
 - 3.4 Email: Key Figures and Analytical Approaches
4. Digital Strategy Development
 - 4.1 Fundamentals of the Customer Journey
 - 4.2 Derivation of Digital Marketing Goals Along the Customer Journey
 - 4.3 Application and Design Possibilities for Digital and Mobile Campaigns
 - 4.4 Application and Design Possibilities for Content Marketing
 - 4.5 Monitoring The Implementation of Strategies and Measures
5. Further Developments and Perspectives of Digital Analytics

Digital Business Models

Course Code: DLMIDBM01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

This course deals with IT-driven start-ups and business models. Based on the discussion of the historical development and framework conditions of digital business, alternative business models in digital business are systematically presented, analyzed and evaluated with regard to their respective strengths and weaknesses. Students study the central approaches to developing an independent corporate positioning and are enabled to autonomously examine and evaluate the central factors influencing corporate success in digital business. Further, alternative financing concepts for digital business models are presented and critically evaluated and the central components of a business plan are detailed. In addition, the entire process of creating and defining a business plan is presented in detail and tested using practical examples.

Course Outcomes

On successful completion, students will be able to

- know the history and framework of digital business models.
- understand the basic principles of innovation management.
- know and understand different business models of the digital economy and be able to evaluate their advantages and disadvantages.
- understand the basics of strategic and operational business model planning in e-commerce.
- independently create a business plan for a digital business model.

Contents

1. Innovation Management and Business Model Definitions
 - 1.1 Basic Concepts of Innovation Management Regarding Digital Business Models
 - 1.2 Business Models: Genesis - Definition - Relation to Innovation
 - 1.3 Specifics of Digital Business Models and Comparison to Traditional Approaches
2. Digital Business Models: Definition and Elements
 - 2.1 New Elements of Digital Business Models
 - 2.2 Redefinition and Core Elements of Digital Business Models
 - 2.3 Value Architecture and Value Mechanics

3. Basic Architectures, Standard Patterns and Network Integration
 - 3.1 Basic Digital Business Model Architectures
 - 3.2 Standard Patterns in Business Model Elements
 - 3.3 Networks and Differentiation Strategies
4. Success Factors and Strategy
 - 4.1 Relationships Between Business Model, Success Factors and Strategy
 - 4.2 Relevant Success Factors of Digital Business Models
 - 4.3 Strategy Levels and Strategy Examples in the Context of Digital Business Models and Their Elements
5. The Business Case and Special Features of Investment Planning
 - 5.1 Elements of the Business Case and Connection to Previous Concepts
 - 5.2 Revenue Mechanics, Revenue Planning and Performance Indicators
 - 5.3 Special Features of Investment Planning

IT Project and Change Management

Course Code: DLMIPC01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	None

Course Description

In this course, students learn about the term change management and its connection with IT projects. They will also learn about success factors and how communication management can be used to support change processes in a targeted manner. Furthermore, they will learn what change management means in the context of IT service management and how IT projects and IT architectures can be specifically designed regarding continuous adaptation.

Course Outcomes

On successful completion, students will be able to

- explain the term change management and how change management and IT projects are related to each other.
- explain success factors in change management and demonstrate how targeted communication management can be done.
- explain the term change management in the context of IT service management and explain how change management can be organized in a structured manner there.
- assess how IT projects and IT architectures can be prepared for continuous change and with which concrete management techniques the ability to change is made possible.

Contents

1. Change Management
 - 1.1 Introduction and Examples
 - 1.2 Definition: Change Management
 - 1.3 Relationships between Change and IT Project Management
 - 1.4 Areas of Influence of IT Projects on Companies

2. Supporting Methods for Change Management
 - 2.1 Introduction
 - 2.2 Rapid Prototyping
 - 2.3 Agility and Change
 - 2.4 Complexity and Change
 - 2.5 The Process Logic of the Tetralemma and Change
 - 2.6 Knowledge Management and Change
 - 2.7 Typology in the Company
 - 2.8 Systemic Structural Constellations and Change

3. Success Factors for Change Management
 - 3.1 Introduction
 - 3.2 Governance
 - 3.3 Holism
 - 3.4 Participation
 - 3.5 Respect and Appreciation
 - 3.6 Visions
 - 3.7 Amplification and Storytelling

4. Communication Management
 - 4.1 Introduction and Basics about Communication
 - 4.2 Communication Design
 - 4.3 New Forms of Communication: BarCamps and World Cafés

5. Procedure for Change Management
 - 5.1 Introduction
 - 5.2 3-Phase Model by Kurt Lewin
 - 5.3 Structuring According to ITIL
 - 5.4 Enterprise Architecture and Change Management: TOGAF and Canvas

IT Project Management

Course Code: DLMBITPAM01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

The purpose of this course is to introduce students to the concepts involved in IT project management. This is achieved through the development of an understanding of the fundamental tenets of project management enhancing the students' ability to apply their knowledge, skills and competencies in analyzing and solving IT project management problems. A special focus is put on the specifics of IT project organization, cost management and the human factor within IT projects.

Course Outcomes

On successful completion, students will be able to

- critically reflect the status of knowledge on IT project management.
- set up different IT project management formats (small, medium and large projects) and know the methods for managing these different IT projects professionally.
- develop an IT management proposal as the fundament of a professional IT project management concept.
- understand and integrate different IT management project plans (e.g., time plan, cost plan, resources plan, risk plan) and use those plans in an integrative IT project planning and controlling scheme.
- organize and to lead an IT project team and its core and/or extended team members.

Contents

1. Introduction: Characteristics of IT Projects
 - 1.1 Defining IT Projects
 - 1.2 Overview on Typical Roles and Phases of IT Projects
 - 1.3 Risks and Challenges of IT Projects
 - 1.4 Role of an IT Project Manager
2. Organizing the Work
 - 2.1 Project Breakdown Structure, Work Packages
 - 2.2 Prioritization
 - 2.3 Time Planning, Milestones, Gantt-Diagram
 - 2.4 Definition of Done

3. Cost Estimation and Controlling
 - 3.1 Challenges of Cost Estimation in IT Projects
 - 3.2 Estimation Techniques: 3-Point Estimation, Double Blind Expert Estimation, Function Points
 - 3.3 Cost Controlling Using Earned Value Analysis
 - 3.4 Risk Management
4. The Human Factor
 - 4.1 Vision Keeping
 - 4.2 Stakeholder Management
 - 4.3 Conflict Management
5. Organizing Small and Medium Projects
 - 5.1 Rational Unified Process (RUP)
 - 5.2 Agile Software Processes
 - 5.3 Scrum
 - 5.4 Plan-driven Project Management in Small Projects
6. Organizing Large Projects
 - 6.1 PMBOK Guide
 - 6.2 Prince2
 - 6.3 Multi Project Management
 - 6.4 Agile Software Processes in Large Projects
 - 6.5 Selection of the Appropriate Project Management Method

Project: Technical Project Planning

Course Code: DLMDSETPL01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMBITPAM01

Course Description

The focus of this course is to apply the project management knowledge gained previously in a practical portfolio project and reflect on the results. Students engage in this portfolio project and document the results, reflecting on the project management concepts they apply and the influence of these concepts on the success of the project.

Course Outcomes

On successful completion, students will be able to

- apply the concepts of project management to real-world tasks and problems.
- translate the learned theories into the practice of project management.
- analyze a real-world problem and define and implement a project to resolve it.
- appraise the results of a project performed and identify what worked well and what did not.
- explain the work they perform, give its scientific background, and produce adequate documentation.

Contents

- In this course, students perform and document a portfolio project in which they apply the project management topics covered in previous modules.

On successful completion, students will be able to

- work on a problem from their major field of study by applying the specialist and methodological skills they have acquired during their studies.
- analyse selected tasks with scientific methods, critically evaluate them and develop appropriate solutions under the guidance of an academic supervisor.
- record and analyse existing (research) literature appropriate to the topic of the Master's thesis.
- prepare a detailed written elaboration in compliance with scientific methods.

Colloquium

On successful completion, students will be able to

- present a problem from their field of study under consideration of academic presentation and communication techniques.
- reflect on the scientific and methodological approach chosen in the Master's thesis.
- actively answer subject-related questions from subject experts (experts of the Master's thesis).

Master Thesis

Course Code: MMTHE01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		27	none

Course Description

The aim and purpose of the Master's thesis is to successfully apply the subject-specific and methodological competencies acquired during the course of study in the form of an academic dissertation with a thematic reference to the major field of study. The content of the Master's thesis can be a practical-empirical or theoretical-scientific problem. Students should prove that they can independently analyse a selected problem with scientific methods, critically evaluate it and work out proposed solutions under the subject-methodological guidance of an academic supervisor. The topic to be chosen by the student from the respective field of study should not only prove the acquired scientific competences, but should also deepen and round off the academic knowledge of the student in order to optimally align his professional abilities and skills with the needs of the future field of activity.

Course Outcomes

On successful completion, students will be able to

- work on a problem from their major field of study by applying the specialist and methodological skills they have acquired during their studies.
- analyse selected tasks with scientific methods, critically evaluate them and develop appropriate solutions under the guidance of an academic supervisor.
- record and analyse existing (research) literature appropriate to the topic of the Master's thesis.
- prepare a detailed written elaboration in compliance with scientific methods.

Contents

- Within the framework of the Master's thesis, the problem as well as the scientific research goal must be clearly emphasized. The work must reflect the current state of knowledge of the topic to be examined by means of an appropriate literature analysis. The student must prove his ability to use the acquired knowledge theoretically and/or empirically in the form of an independent and problem-solution-oriented application.

Colloquium

Course Code: MMTHE02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		3	none

Course Description

The colloquium will take place after submission of the Master's thesis. This is done at the invitation of the experts. During the colloquium, the students must prove that they have fully independently produced the content and results of the written work. The content of the colloquium is a presentation of the most important work contents and research results by the student, and the answering of questions by the experts.

Course Outcomes

On successful completion, students will be able to

- present a problem from their field of study under consideration of academic presentation and communication techniques.
- reflect on the scientific and methodological approach chosen in the Master's thesis.
- actively answer subject-related questions from subject experts (experts of the Master's thesis).

Contents

- The colloquium includes a presentation of the most important results of the Master's thesis, followed by the student answering the reviewers' technical questions.
