

MODULE HANDBOOK

Bachelor of Engineering

Bachelor Robotics (FS-BAROE)

180 ECTS

Distance Learning

Classification: Undergraduate

Contents

1. Semester

Module DLBROIR_E: Introduction to Robotics

Module Description	13
Course DLBROIR01_E: Introduction to Robotics	15

Module DLBCSIAW: Introduction to Academic Work

Module Description	19
Course DLBCSIAW01: Introduction to Academic Work	21

Module DLBCSM2: Mathematics II

Module Description	27
Course DLBCSM201: Mathematics II	29

Module DLBINGNAG_E: Scientific and technical fundamentals

Module Description	33
Course DLBINGNAG01_E: Scientific and technical fundamentals	35

Module DLBDSMFLA: Mathematics: Linear Algebra

Module Description	41
Course DLBDSMFLA01: Mathematics: Linear Algebra	43

Module DLBROTD_E: Technical Drawing

Module Description	47
Course DLBROTD01_E: Technical Drawing	49

2. Semester

Module DLBDSEAR1: Production Engineering

Module Description	57
Course DLBDSEAR01: Production Engineering	59

Module DLBDSIPWP: Introduction to Programming with Python

Module Description	65
Course DLBDSIPWP01: Introduction to Programming with Python	67

Module DLBDSMFC: Mathematics: Analysis

Module Description	71
Course DLBDSMFC01: Mathematics: Analysis	73

Module DLBROMS_E: Mechanics - Statics

Module Description	77
Course DLBROMS01_E: Mechanics - Statics	79

Module DLBINGET-01_E: Electrical Engineering

Module Description	83
Course DLBINGET01-01_E: Electrical Engineering	85

Module DLBROPDCAD_E: Project: Design with CAD

Module Description	89
Course DLBROPDCAD01_E: Project: Design with CAD	91

3. Semester**Module DLBROST_E: Sensor Technology**

Module Description	99
Course DLBROST01_E: Sensor Technology	101

Module DLBROSS_E: Signals and Systems

Module Description	107
Course DLBROSS01_E: Signals and Systems	109

Module DLBROMK_E: Mechanics - Kinematics

Module Description	113
Course DLBROMK01_E: Mechanics - Kinematics	115

Module DLBROMD_E: Mechanics - Dynamics

Module Description	119
Course DLBROMD01_E: Mechanics - Dynamics	121

Module DLBCSCW: Collaborative Work

Module Description	125
Course DLBCSCW01: Collaborative Work	127

Module DLBROEPRS1_E: Programming with C/C++

Module Description	133
Course DLBROEPRS01_E: Programming with C/C++	135

4. Semester**Module DLBROMSY_E: Mechatronic Systems**

Module Description	141
Course DLBROMSY01_E: Mechatronic Systems	143

Module DLBROCSE_E: Control Systems Engineering	
Module Description	147
Course DLBROCSE01_E: Control Systems Engineering	149
Module DLBROPMSR_E: Project: Modeling and Simulation of Robots

Module Contents

- Introduction to Robotics
- Trends
- Industrial Robots
- Mobile Robots
- Applications

Learning Outcomes**Introduction to Robotics**

On successful completion, students will be able to

- name important developments in the field of robotics.
- understand the mechanical structure and characteristics of robots.
- name characteristics and challenges of industrial robots.
- name characteristics and challenges of mobile robots.
- understand the role of robots in applications.
- name and understand current trends in the field of robotics.

Introduction to Robotics

Course Code: DLBROIR01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Robotics is experiencing very interesting developments, which experts describe as being a transition to a new generation of robots. We have moved from the “4Ds” of Robotics 1.0 (dull, dirty, dumb, dangerous) to the “4Ss” of Robotics 2.0 (smarter, safer, sensors, simple), but we still need to proceed further to the “4Ms” of Robotics 3.0 (multitasking, emotive, morphing, multiagent). This course, thus, provides the required background to understand the main development of robotics looking at industrial as well as at mobile robots, their main characteristics, issues, challenges, applications, and development trends.

Course Outcomes

On successful completion, students will be able to

- name important developments in the field of robotics.
- understand the mechanical structure and characteristics of robots.
- name characteristics and challenges of industrial robots.
- name characteristics and challenges of mobile robots.
- understand the role of robots in applications.
- name and understand current trends in the field of robotics.

Contents

1. What is Robotics?
 - 1.1 Basics and Definitions
 - 1.2 History and Cultural Influence
 - 1.3 Challenges and Trends (from Robotics 1.0 to Robotics 3.0)
2. Robots
 - 2.1 Mechanical Structure
 - 2.2 Kinematic Chains
 - 2.3 Market Overview

3. Industrial Robots
 - 3.1 Components of Industrial Robot Systems
 - 3.2 Characteristics
 - 3.3 Common Industrial Robots
 - 3.4 Applications
 - 3.5 Trends
4. Mobile Robots
 - 4.1 Components of Mobile Robot Systems
 - 4.2 Characteristics
 - 4.3 Common Mobile Robots
 - 4.4 Applications
 - 4.5 Trends
5. Applications
 - 5.1 Industrial Robots
 - 5.2 Healthcare
 - 5.3 Agriculture or Field Robotics
 - 5.4 Space and Defense
 - 5.5 Warehouse and Logistics
 - 5.6 Construction
 - 5.7 Wearables
 - 5.8 Social Robots

Learning Outcomes

Introduction to Academic Work

On successful completion, students will be able to

- understand and apply formal criteria of a scientific work.
- distinguish basic research methods and identify criteria of good scientific practice.
- describe central scientific theoretical basics and research paradigms and their effects on scientific research results.
- use literature databases, literature administration programs, and other library structures properly; avoid plagiarism; and apply citation styles correctly.
- apply the evidence criteria to scientific texts.
- define a research topic and derive a structure for scientific texts.
- compile a list of literature, illustrations, tables, and abbreviations for scientific texts.
- understand and distinguish between the different forms of scientific work at IU.

Introduction to Academic Work

Course Code: DLBCSIAW01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The application of good scientific practice is one of the basic academic qualifications that should be acquired while studying. This course deals with the distinction between everyday knowledge and science. This requires a deeper understanding of the theory of science, as well as the knowledge of basic research methods and instruments for writing scientific texts. The students therefore gain initial insight into academic research and are introduced to the basic knowledge that will help them in the future to produce scientific papers. In addition, the students receive an overview of the different IU examination forms and insight into their requirements and implementation.

Course Outcomes

On successful completion, students will be able to

- understand and apply formal criteria of a scientific work.
- distinguish basic research methods and identify criteria of good scientific practice.
- describe central scientific theoretical basics and research paradigms and their effects on scientific research results.
- use literature databases, literature administration programs, and other library structures properly; avoid plagiarism; and apply citation styles correctly.
- apply the evidence criteria to scientific texts.
- define a research topic and derive a structure for scientific texts.
- compile a list of literature, illustrations, tables, and abbreviations for scientific texts.
- understand and distinguish between the different forms of scientific work at IU.

Contents

1. Theory of Science
 - 1.1 Introduction to Science and Research
 - 1.2 Research Paradigms
 - 1.3 Fundamental Research Decisions
 - 1.4 Effects of Scientific Paradigms on Research Design

2. Application of Good Scientific Practice
 - 2.1 Research Ethics
 - 2.2 Evidence Teaching
 - 2.3 Data Protection and Affidavit
 - 2.4 Orthography and Shape
 - 2.5 Identification and Delimitation of Topics
 - 2.6 Research Questions and Structure
3. Research Methods
 - 3.1 Empirical Research
 - 3.2 Literature and Reviews
 - 3.3 Quantitative Data Collection
 - 3.4 Qualitative Data Collection
 - 3.5 Mix of Methods
 - 3.6 Critique of Methods and Self-Reflection
4. Librarianship: Structure, Use, and Literature Management
 - 4.1 Plagiarism Prevention
 - 4.2 Database Research
 - 4.3 Literature Administration
 - 4.4 4.4 Citation and Author Guidelines
 - 4.5 4.5 Bibliography
5. Scientific Work at the IU – Research Essay
6. Scientific Work at the IU - Project Report
7. Scientific Work at the IU - Case Study
8. Scientific Work at the IU - Bachelor Thesis
9. Scientific Work at the IU – Oral Assignment
10. Scientific Work at the IU – Oral Project Report
11. Scientific Work at the IU - Colloquium
12. Scientific Work at the IU - Portfolio
13. Scientific Work at the IU - Exam

Module Contents

- Selected topics of linear algebra
- Selected chapters on graphs and algorithms

Learning Outcomes**Mathematics II**

On successful completion, students will be able to

- understand basic concepts of linear algebra, their interrelations, and their application in IT and technology and be able solve tasks independently using these concepts.
- understand and distinguish the basic concepts and important algorithms for graphs and trees from the field of discrete mathematics as well as their application in IT and technology.

Mathematics II

Course Code: DLBCSM201

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course continues the introduction to topics of discrete mathematics which began in the module "Mathematics Fundamentals I". In this course, the concepts of linear algebra are introduced and knowledge about graphs and algorithms for graphs is deepened. Typical questions of applied computer science are selected, and students are shown how they can be solved with graphs.

Course Outcomes

On successful completion, students will be able to

- understand basic concepts of linear algebra, their interrelations, and their application in IT and technology and be able solve tasks independently using these concepts.
- understand and distinguish the basic concepts and important algorithms for graphs and trees from the field of discrete mathematics as well as their application in IT and technology.

Contents

1. Introduction to Matrices
 - 1.1 Basic Concepts of Matrices
 - 1.2 Addition of Matrices
 - 1.3 Scalar Multiplication and Product
2. Inverting Matrices
 - 2.1 Multiplication of Matrices
 - 2.2 Properties of Matrix Multiplication
 - 2.3 Inverse Matrices
3. Linear Systems of Equations
 - 3.1 Gauss Algorithm
 - 3.2 Example Applications of the Gaussian Algorithm
4. Introduction to Graphs
 - 4.1 Undirected Graphs
 - 4.2 Further Properties of Graphs
 - 4.3 Adjacency Matrix

5. The Problem of the Shortest Routes
 - 5.1 Directional Graph or Digraph
 - 5.2 Weighted Graph
 - 5.3 Dijkstra's Algorithm
6. The Königsberg Bridge Problem
 - 6.1 Routing in Graphs
 - 6.2 Eulerian Graph
 - 6.3 Hierholzer's Algorithm
 - 6.4 The Postman Problem
7. A City Tour Where Each City is Visited Exactly Once.
 - 7.1 Special Graphs
 - 7.2 Hamiltonian Graph
 - 7.3 The Ore and Dirac Condition
 - 7.4 The Problem of the Traveling Salesman
8. Trees
 - 8.1 Properties of Trees
 - 8.2 Root Tree
 - 8.3 Spanning Tree
 - 8.4 Minimal Spanning Tree

On successful completion, students will be able to

- identify basic methods and subject areas in natural sciences.
- know mathematical basics for utilisation in physics.
- identify the basics of thermodynamics, electricity and magnetism.
- identify the physical properties of solids.
- distinguish solids with their bonding and conductivity types and differentiate materials with regard to their properties.
- identify basic tasks of statics and apply them.
- recognize the laws of dynamics and apply them.
- identify different stress types and calculate them.

Scientific and technical fundamentals

Course Code: DLBINGNAG01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The aim of the course is to give students an overview of essentials in natural sciences relevant to Engineering Studies. For this purpose, selected areas of physics, materials science and technical mechanics are considered. In the first part, this course introduces elementary scientific principles and incorporates mathematical basics. In the second part, thermodynamics, electricity and magnetism are used to give an overview of selected areas of physics. The third part deals with physical properties of solids and how they are used in Materials Science. The course concludes with a fourth topic, which deals with selected aspects of Technical Mechanics.

Course Outcomes

On successful completion, students will be able to

- identify basic methods and subject areas in natural sciences.
- know mathematical basics for utilisation in physics.
- identify the basics of thermodynamics, electricity and magnetism.
- identify the physical properties of solids.
- distinguish solids with their bonding and conductivity types and differentiate materials with regard to their properties.
- identify basic tasks of statics and apply them.
- recognize the laws of dynamics and apply them.
- identify different stress types and calculate them.

Contents

1. Introduction to methods and disciplines
 - 1.1 Scientific method
 - 1.2 Disciplines
 - 1.3 Key areas and quantities of physics
 - 1.4 Description of chemical structures
2. Mathematical principles
 - 2.1 Complex numbers
 - 2.2 Differential calculus
 - 2.3 Integral Calculus

3. Thermodynamics
 - 3.1 Basics
 - 3.2 Fundamental principles
 - 3.3 Change of state theory
4. Electricity and magnetism
 - 4.1 Definitions and laws
 - 4.2 Transfer of charges
 - 4.3 Fields
5. Solid-State Physics
 - 5.1 Atomic and quantum physics basics
 - 5.2 Binding types of solids
 - 5.3 Crystalline, amorphous and macromolecular solids
 - 5.4 Conductors, semiconductors and insulators
 - 5.5 Superconductor
6. Materials Science
 - 6.1 Properties of materials
 - 6.2 Metallic materials
 - 6.3 Plastics
 - 6.4 Ceramic materials
 - 6.5 Composite materials
7. Statics
 - 7.1 Basics
 - 7.2 Fundamental tasks
 - 7.3 Trusses
8. Dynamics
 - 8.1 Movement theory
 - 8.2 Rotational movements
 - 8.3 Work and performance
9. Theory of Strength of Materials
 - 9.1 Basic terms
 - 9.2 Stress types
 - 9.3 Surface pressure and moments in metric space

Mathematics: Linear Algebra

Course Code: DLBDSMFLA01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Linear algebra is a fundamental subject in mathematics. Its historical origin lies in the development of solution techniques for systems of linear equations arising from geometric problems. Numerous scientific and engineering applications can be solved using its methods. This course introduces the foundations of linear algebra and its basic notions like vectors and matrices. It then builds upon this foundation by introducing the derivation of solution techniques for problems in analytical geometry.

Course Outcomes

On successful completion, students will be able to

- explain fundamental notions in the domain of linear equation systems.
- exemplify properties of vectors and vector spaces.
- summarize characteristics of linear and affine mappings.
- identify important relations in analytical geometry.
- utilize different methods for matrix decomposition.

Contents

1. Fundamentals
 - 1.1 Systems of linear equations
 - 1.2 Matrices as compact representations of linear equations
 - 1.3 Matrix algebra
 - 1.4 Inverse and trace
2. Vector Spaces
 - 2.1 Definition
 - 2.2 Linear combination and linear dependence
 - 2.3 Base, span, and rank
3. Linear and affine mappings
 - 3.1 Matrix representations of linear mappings
 - 3.2 Image and kernel
 - 3.3 Affine spaces and sub-spaces
 - 3.4 Affine mappings

4. Analytical Geometry
 - 4.1 Norms
 - 4.2 Inner and dot product
 - 4.3 Orthogonal projections
 - 4.4 Rotations

5. Matrix Decomposition
 - 5.1 Determinant and trace
 - 5.2 Eigenvalues and eigenvectors
 - 5.3 Cholesky decomposition
 - 5.4 Eigenvalue decomposition and diagonalisation
 - 5.5 Singular value decomposition

Technical Drawing

Course Code: DLBROTD01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The content of this course focuses on reading, understanding and creating technical drawings. Students will be introduced to the fields of Engineering and Design. In addition, students will acquire basic knowledge in technical drawing and descriptive geometry. In doing so, they learn about the design and development process. The aim of this course is for students to understand the relevance of design in product development. They can analyze problems by reading drawings and will be able to formulate and create product ideas out of them. Technical drawing is the foundation for the description of technical products as well as technical communication and, thus, a basic qualification for engineering work.

Course Outcomes

On successful completion, students will be able to

- formulate product ideas by creating technical drawings.
- read and interpret technical drawings.
- analyze design processes.
- optimize design processes.

Contents

1. Illustration in Technical Drawings
 - 1.1 Sketches (by Hand)
 - 1.2 Axonometric Projection
2. Basics of Technical Drawing
 - 2.1 Types of Drawings
 - 2.2 Drawing Format
3. Views
 - 3.1 Three-Panel Projection
 - 3.2 Projection Methods (1 & 3)
 - 3.3 Cuts/Breakout

4. Dimensioning
 - 4.1 Line Types
 - 4.2 Dimensioning Rules
5. Surfaces
 - 5.1 Definition
 - 5.2 Illustration
6. Tolerances
 - 6.1 Dimensioning
 - 6.2 Standardized Fitting System
 - 6.3 Basic Shaft/Basic Hole
 - 6.4 Calculation of Tolerance Chains
7. Standards
 - 7.1 Classification of Standards
 - 7.2 Technical Drawing Standards
 - 7.3 Standard Parts

- Additive Manufacturing Processes
- Rapid Prototyping
- Rapid Tooling
- Direct/Rapid Manufacturing
- Cyber-Physical Production Plants

Learning Outcomes

Production Engineering

On successful completion, students will be able to

- understand the basic concepts and interrelationships of production engineering.
- understand current changes in manufacturing technology due to technologies such as additive manufacturing and megatrends such as cyber physical systems.
- assign different manufacturing processes to the main manufacturing groups according to DIN 8580.
- understand the basic principle of additive manufacturing processes.
- distinguish between different additive manufacturing processes.
- understand the terms Rapid Prototyping, Rapid Tooling, and Direct Manufacturing and name individual processes and application examples.
- understand the elements and properties of cyber-physical production plants.

Production Engineering

Course Code: DLBDSEAR01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The aim of the course is to provide students with an overview of the processes that have influenced and still influence production processes through technological developments under the generic term Industry 4.0, based on traditional, standardized manufacturing techniques. These include, in particular, technological advances in additive manufacturing processes that enable applications such as rapid prototyping, rapid tooling, and direct manufacturing. Finally, the course deals with the consequences of the digitalization and networking of production facilities and their elements in the sense of a cyber-physical system.

Course Outcomes

On successful completion, students will be able to

- understand the basic concepts and interrelationships of production engineering.
- understand current changes in manufacturing technology due to technologies such as additive manufacturing and megatrends such as cyber physical systems.
- assign different manufacturing processes to the main manufacturing groups according to DIN 8580.
- understand the basic principle of additive manufacturing processes.
- distinguish between different additive manufacturing processes.
- understand the terms Rapid Prototyping, Rapid Tooling, and Direct Manufacturing and name individual processes and application examples.
- understand the elements and properties of cyber-physical production plants.

Contents

1. Introduction to Manufacturing Technology
 - 1.1 Basic Terms and Contexts in Manufacturing Theory
 - 1.2 Historical Development of Production
 - 1.3 The Discussion About the Long Tail

2. Classification Of Manufacturing Processes
 - 2.1 Casting and Molding
 - 2.2 Forming
 - 2.3 Machining
 - 2.4 Joining
 - 2.5 Coating
 - 2.6 Changing the Properties of Substances
3. Additive Manufacturing Processes
 - 3.1 Basic Principles and Legal Aspects
 - 3.2 Stereolithography (STL)
 - 3.3 Selective Laser Sintering and Selective Beam Melting With Laser or Electron Beam
 - 3.4 Fused Deposition Modeling (FDM)
 - 3.5 Multi-Jet Modeling (MJM) and Poly-Jet Process (PJM)
 - 3.6 3D Printing Process (3DP)
 - 3.7 Laminating Processes
 - 3.8 Mask Sintering
4. Rapid Prototyping
 - 4.1 Definition
 - 4.2 Strategic and Operational Aspects
 - 4.3 Application Areas and Examples
5. Rapid Tooling
 - 5.1 Definition, Strategic, and Operational Aspects
 - 5.2 Indirect and Direct Procedures
6. Direct/Rapid Manufacturing
 - 6.1 Potentials and Requirements for Procedures
 - 6.2 Implementation, Application Areas, and Examples
7. Cyber-Physical Production Plants
 - 7.1 Derivation of the Terms Industry 4.0 and Cyber-Physical Systems
 - 7.2 Megatrend Cyber Physical Systems (CPS)
 - 7.3 Definition Cyber-Physical Production Plant
 - 7.4 Effects on Planning and Operation of Production Facilities
 - 7.5 Dynamic Reconfiguration and Migration of Production Facilities

Introduction to Programming with Python

Course Code: DLBDSIPWP01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course provides students with a foundational understanding of the Python programming language. Following an introductory exposition to the importance of Python for data science-related programming tasks, students will be acquainted with fundamental programming concepts like variables, data types, and statements. Building on this basis, the important notion of a function is explained and errors, exception handling, and logging are explicated. The course concludes with an overview of the most widely-used library packages for data science.

Course Outcomes

On successful completion, students will be able to

- use fundamental Python syntax.
- recollect common elementary data types.
- recognize foundational programming concepts and their realization in Python.
- understand error handling and logging.
- create working programs.
- list the most important libraries and packages for data science.

Contents

1. Introduction
 - 1.1 Why Python?
 - 1.2 Obtaining and installing Python
 - 1.3 The Python interpreter , IPython, and Jupyter
2. Variables and Data Types
 - 2.1 Variables and value assignment
 - 2.2 Numbers
 - 2.3 Strings
 - 2.4 Collections
 - 2.5 Files

3. Statements
 - 3.1 Assignment, expressions, and print
 - 3.2 Conditional statements
 - 3.3 Loops
 - 3.4 Iterators and comprehensions
4. Functions
 - 4.1 Function declaration
 - 4.2 Scope
 - 4.3 Arguments
5. Errors and Exceptions
 - 5.1 Errors
 - 5.2 Exception handling
 - 5.3 Logs
6. Modules and Packages
 - 6.1 Usage
 - 6.2 Namespaces
 - 6.3 Documentation
 - 6.4 Popular data science packages

Mathematics: Analysis

Course Code: DLBDSMFC01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Analysis is one of the essential basic subjects of mathematics. Originally developed to be able to formulate and solve problems of classical mechanics mathematically, in its present rigorous form it has become indispensable in numerous applications in the natural sciences and technology. This module aims to introduce the basic hand tool of differential and integral calculus and to explain their mutual interrelations. In addition, the differential calculus is generalized to multidimensional spaces.

Course Outcomes

On successful completion, students will be able to

- summarize the basic concepts of analysis.
- illustrate the terms "consequences" and "series".
- explain the concept of function and to understand the concept of the inverse function.
- explain basic statements of the differential and integral calculus.
- explain the relationship between differentiation and integration.
- master the derivation of higher-dimensional functions.

Contents

1. Sequences and series
 - 1.1 Sequences and series
 - 1.2 Convergence of infinite series
 - 1.3 power series
2. Functions and reverse functions
 - 2.1 Continuous functions
 - 2.2 Exponential and logarithm function
 - 2.3 Trigonometric functions and their inverse functions
3. Differential calculus
 - 3.1 Derivatives and higher derivatives
 - 3.2 curve discussion
 - 3.3 Rules (chain rule, product rule, quotient rule ...)
 - 3.4 Taylor Rows

4. Integral calculus
 - 4.1 The Riemann Integral
 - 4.2 Specific and indefinite integrals
 - 4.3 The fundamental theorem of differential and integral calculus
 - 4.4 Volumes and shells of rotary bodies
 - 4.5 Paths and lengths
5. Differential calculus in the R^n
 - 5.1 Partial Derivation
 - 5.2 Total Derivation
 - 5.3 Gradients of vector-valued functions and matrices

Module Contents

- Bearing reactions
- Balance conditions
- Determinancy
- Structure
- Mechanics

Learning Outcomes**Mechanics - Statics**

On successful completion, students will be able to

- calculate bearing reactions.
- describe the most important terms of statics and the static determination of systems.
- understand the importance of systems of forces on supporting structures.
- describe and calculate static processes through balance conditions.
- determine balance points.

Mechanics - Statics

Course Code: DLBROMS01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In this course, participants will get an overview of the importance of systems of forces, frameworks and supporting structures and learn the basics of their calculation and corresponding methods. Students will learn to transform technical systems into suitable mechanical replacement models. Further, using balance conditions, students will be able to specify a complete load state on rigid systems by means of clearance cutting. Students can independently check systems for static determination. They can independently calculate bar forces of planar frameworks following diverse methods. Furthermore, students are able to calculate inner component load of simple mechanical systems by means of internal force variables. They can interpret stress values and independently evaluate the component load. Finally, limitations in rigid body statics are discussed.

Course Outcomes

On successful completion, students will be able to

- calculate bearing reactions.
- describe the most important terms of statics and the static determination of systems.
- understand the importance of systems of forces on supporting structures.
- describe and calculate static processes through balance conditions.
- determine balance points.

Contents

1. Basic Physical Quantities, Vectors
 - 1.1 Physical Quantities, Units
 - 1.2 Newton's Basic Axioms
 - 1.3 Scalars, Position and Force Vectors
 - 1.4 Vector Operations
2. Static Equilibrium
 - 2.1 Equilibrium of Particles
 - 2.2 Moment
 - 2.3 Center of Gravity
 - 2.4 Equilibrium of Rigid Bodies
 - 2.5 Bearing Types, Static Determinacy

3. Planar Trusses
 - 3.1 Simple Triangular Trusses
 - 3.2 Analysis Using Methods of Joints
 - 3.3 Analysis Using Method of Sections
 - 3.4 The Principle of Virtual Work
4. Internal Forces
 - 4.1 Center of Areas, Moment of Inertia
 - 4.2 Beam Internal Loading
 - 4.3 Beams with Different Support Conditions
5. Solid State Friction
 - 5.1 Static Friction
 - 5.2 Sliding Friction
 - 5.3 Rolling Friction

Module Contents

- Basic Terms
- Introduction to Direct Current Technology
- Calculation of Direct Current Networks
- Electric Fields
- Introduction to Alternating Current Technology
- Calculation of Alternating Current Networks
- Locus Curves
- Transformers
- Multiphase Systems
- Transient Response

Learning Outcomes**Electrical Engineering**

On successful completion, students will be able to

- know the basic terms of electrical engineering.
- calculate DC (direct current) circuits and networks.
- know the different types of electrical fields.
- calculate AC (alternating current) circuits and networks.
- know methods for the construction of root locus curves.
- know the basic structure of different types of transformers.
- calculate equivalent circuit diagrams with transformers.
- know multiphase systems and can distinguish them from single-phase systems.
- measure performance in a three-phase system.
- calculate the transient response with the Laplace transformation.

Electrical Engineering

Course Code: DLBINGET01-01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The aim of the course is to offer students a broad insight into the basics of electrical engineering. First of all, the basic terms of electrical engineering and the relevant physical quantities are introduced. This is followed by two comprehensive sections on direct current and alternating current technology. They are first briefly introduced using their essential elements and properties and then supplemented by methods for calculating the respective circuits and networks. Based on this, multi-phase systems and their application in public power supply are presented. The course concludes with a consideration of the transient response and its calculation using the Laplace transformation.

Course Outcomes

On successful completion, students will be able to

- know the basic terms of electrical engineering.
- calculate DC (direct current) circuits and networks.
- know the different types of electrical fields.
- calculate AC (alternating current) circuits and networks.
- know methods for the construction of root locus curves.
- know the basic structure of different types of transformers.
- calculate equivalent circuit diagrams with transformers.
- know multiphase systems and can distinguish them from single-phase systems.
- measure performance in a three-phase system.
- calculate the transient response with the Laplace transformation.

Contents

1. Basic Terms
 - 1.1 Charge, Electric Fields and Voltage
 - 1.2 Current and Resistance
 - 1.3 Electrical Energy and Power
2. Introduction to Direct Current Technology
 - 2.1 Kirchhoff's Laws
 - 2.2 Calculation of Series and Parallel Connections
 - 2.3 Voltage and Current Divider Rule

3. Calculation of Direct Current Networks
 - 3.1 Mesh-Current and Node-Voltage Method
 - 3.2 Superposition Method
 - 3.3 Wye-Delta Transformation of Circuits
 - 3.4 Examples
4. Introduction to Alternating Current Technology
 - 4.1 Electrostatic and Magnetic Fields
 - 4.2 Capacitor and Inductor
 - 4.3 Alternating Variables and their Calculation
 - 4.4 Network Analysis with Complex-Valued Variables
5. Calculation of Alternating Current Networks
 - 5.1 Simple AC Circuits and their Calculation
 - 5.2 Power Types in the AC Circuit
 - 5.3 Oscillating Circuits
 - 5.4 Examples
6. Root Locus Curves
 - 6.1 The Root Locus Concept
 - 6.2 Construction of Various Root Locus Curves
 - 6.3 Examples
7. Transformers
 - 7.1 Basic Functionality
 - 7.2 Equivalent Circuit Diagram
 - 7.3 Measurement Methods
8. Multiphase Systems
 - 8.1 Three-Phase Current Technology (Three-Phase Systems)
 - 8.2 Power Measurement in Three-Phase Systems
9. Transient Response
 - 9.1 Description of Time Dependent Processes with Differential Equations
 - 9.2 Setting up Differential Equations of Electrical Circuits
 - 9.3 Introduction to the Laplace Transformation
 - 9.4 Calculation of Transient Response

Project: Design with CAD

Course Code: DLBROPDCAD01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	DLBROTD01_E

Course Description

Participants of this course have already acquired knowledge of basic contents of computer-aided design. This course is intended to help consolidate what has been learned from brainstorming over conceptualizing to practical application. Through the application of practical exercises using CAD, students connect and implement the modules of a CAD process chain and their individual functions. In this way, students gain an insight into the problems frequently encountered in the practice of engineering.

Course Outcomes

On successful completion, students will be able to

- create complex components in CAD.
- design components.
- create assemblies.
- review assembly and functionality (Digital Twin).

Contents

- In this course students develop their own design ideas from scratch. A task with certain conditions is assigned, on the basis of which students will develop their mechanical design. For this purpose, students will use these common methods of mechanical design.
 - Creation of a requirement and specification sheet
 - brainstorming (e.g. morphological box/pairwise comparison/utility analysis)
 - design in CAD
 - Documentation in the form of a technical report

Sensor Technology

Course Code: DLBROST01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Sensors are at the base of any modern engineering system, for example, control systems in robotics. This course provides the basic knowledge to understand sensors and their characteristics. A specific sensor is chosen for an application mainly based on its characteristics and on its physical effect. After an introduction on sensors and types of sensors, this course introduces the main characteristics such as accuracy, precision, resolution, sensitivity, linearity, static and dynamic properties. The second part of the course details the main sensor effects and shows how sensor systems can be built based on such effects and used in engineering applications. The last part of the course shows current trends and advanced applications of sensor technology.

Course Outcomes

On successful completion, students will be able to

- understand the main sensor characteristics.
- read and understand a typical sensor data sheet.
- understand sensor effects.
- understand and characterize sensor platforms.
- select the appropriate sensor technology for a given application.

Contents

1. Introduction to Measurement Uncertainty
 - 1.1 Measurement Uncertainty
 - 1.2 Confidence Intervals
 - 1.3 Expression of Uncertainty
2. Sensors
 - 2.1 Sensors and Transducers
 - 2.2 Selection of Sensors
 - 2.3 Sensor Characteristics
 - 2.4 Measurement Systems and Components

3. Resistive Sensors
 - 3.1 Resistivity and Resistance
 - 3.2 Potentiometric Sensors
 - 3.3 Strain Gauges
 - 3.4 Piezoresistive Sensors
 - 3.5 Magnetoresistive Sensors
 - 3.6 Thermoresistive Sensors
 - 3.7 Optoresistive Sensors
4. Capacitive Sensors
 - 4.1 Capacitance and Permittivity
 - 4.2 Configurations
 - 4.3 Applications
5. Inductive and Magnetic Sensors
 - 5.1 Magnetic and Electromagnetic Quantities
 - 5.2 Magnetic Field Sensors
 - 5.3 Magnetic Displacement and Force Sensors
 - 5.4 Applications
6. Optical Sensors
 - 6.1 Electro-Optical Components
 - 6.2 Optical Displacement Sensors
 - 6.3 Applications
7. Piezoelectric Sensors
 - 7.1 Piezoelectricity
 - 7.2 Force Pressure and Acceleration Sensors
 - 7.3 Applications
8. Acoustic Sensors
 - 8.1 Acoustic Medium
 - 8.2 Measurement Methods
 - 8.3 Applications

9. Advanced Sensor Technology
 - 9.1 Organic Sensors
 - 9.2 Sensors for Health and Environment
 - 9.3 Wearable Sensors
 - 9.4 Wireless Sensors in Industrial Environments

Signals and Systems

Course Code: DLBROSS01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

From a mathematical perspective almost everything can be seen and analyzed as being a system, i.e. a unit that processes signals and information and generates signals and information. This course provides the mathematical basics on signals and systems, with a particular emphasis on continuous time. In the first part, the mathematical preliminaries are given, and a classification of signals and systems is presented. The time-domain analysis is introduced, discussing how systems respond to external inputs and their internal conditions. To analyze systems and signals, however, further tools such as the Laplace Transform and the Fourier Series and Transform are widely implemented, because they give useful insights, especially into frequency behavior. The bridge between continuous-time and discrete time systems and signals, i.e. sampling, is also discussed.

Course Outcomes

On successful completion, students will be able to

- classify systems and signals.
- analyze properties and solve problems involving systems and inputs.
- use the Laplace Transform to analyze linear time-invariant systems.
- apply the Fourier Series and Fourier Transform to analyze periodic and aperiodic signals.
- calculate measures of systems and signals, e.g. signal energy.
- understand sampling.

Contents

1. Introduction to Systems and Signals
 - 1.1 Classification of Signals
 - 1.2 Signal Operations
 - 1.3 Classification of Systems
 - 1.4 System Models
2. Time-Domain Analysis of Continuous-Time Systems
 - 2.1 System Response to Internal Conditions and External Input
 - 2.2 System Stability

3. Continuous-Time System Analysis Using the Laplace Transform
 - 3.1 The Laplace Transform
 - 3.2 The Inverse Laplace Transform
 - 3.3 Solution of Differential Equations
 - 3.4 Block Diagrams
 - 3.5 Applications to Systems
4. Continuous-Time Signal Analysis: The Fourier Series and The Fourier Transform
 - 4.1 The Fourier Series
 - 4.2 The Fourier Transform
 - 4.3 Signal Energy
 - 4.4 Applications
5. Sampling
 - 5.1 The Sampling Theorem
 - 5.2 Signal Reconstruction
 - 5.3 Analog to Digital Conversion
 - 5.4 Spectral Sampling
 - 5.5 An Introduction to the Discrete and Fast Fourier Transforms

Mechanics - Kinematics

Course Code: DLBROMK01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The word robot denotes a high variety of mechanical structures ranging from anthropomorphic industrial robots, to robots which mimic animals. This course provides the necessary preliminary background to develop, analyze, model, and simulate mechanical robotic structures of any kind from the viewpoint of the kinematics, i.e., neglecting forces and torques. The first part introduces the kinematics, i.e., a way to describe a robot as a kinematic chain of rigid bodies, which is important to represent position and orientation of the robotic end-effector in the operational space as function of each joint variable. The differential kinematics gives the relationship between joint velocities and corresponding velocity of the end-effector. The important problem of inverse kinematics, unavoidable when designing trajectories of the robot, is also discussed and methods for solutions are presented.

Course Outcomes

On successful completion, students will be able to

- understand and describe the motion of rigid bodies.
- understand and calculate the direct and inverse kinematic of typical robotic structures.
- calculate the differential kinematics of typical robotic structures .

Contents

1. Introduction
 - 1.1 Configuration Space
 - 1.2 Degrees of Freedom
 - 1.3 Topology
 - 1.4 Task Space and Workspace
2. Rigid Body Motions
 - 2.1 Pose of a Rigid Body
 - 2.2 Representations of Orientation
 - 2.3 Homogeneous Transformations
 - 2.4 Exponential Coordinate Representation

3. Forward Kinematics
 - 3.1 Introduction
 - 3.2 The Denavit-Hartenberg Convention
 - 3.3 Product of Exponentials
 - 3.4 The Universal Robot Description Format (URDF)
4. Inverse Kinematics
 - 4.1 Analytical Inverse Kinematics
 - 4.2 Numerical Inverse Kinematics
5. Differential Kinematics and Statics
 - 5.1 Manipulator Jacobian
 - 5.2 Kinematic Singularities
 - 5.3 Manipulability Ellipsoids
 - 5.4 Inverse Differential Kinematics
 - 5.5 Statics

Module Contents

- Dynamics of Rigid Bodies
- Typical Joint Actuators
- Direct Dynamics
- Inverse Dynamics

Learning Outcomes**Mechanics - Dynamics**

On successful completion, students will be able to

- to understand the dynamics of rigid bodies and the basic physical laws.
- to model the dynamics of robots based on the Lagrange and Newton approaches.
- to establish dynamic equations for the design, optimization, analysis of robots.
- to understand how robot control based on a dynamic model can be realized.

Course Description

The kinematics of a robot allows describing the position and orientation (the pose) of the end-effector based on the joint variables. The presence of forces and torques, i.e., the dynamics of the motion, is completely neglected. The dynamics relates joint variables' velocities and accelerations to the forces and torques acting on the robot. This course introduces the dynamics of rigid bodies and how it can be described mathematically to be used in models, for instance for simulation purposes. The course then introduces two approaches to describe the dynamics of robots, namely the Euler-Lagrange approach and the Newton-Euler one. The Newton-Euler approach yields an iterative algorithm which can be implemented in an efficient way and can be used to calculate necessary torques to achieve required motion dynamics. The necessary torques are the input to various actuating mechanism which must be considered in the overall dynamics. This course shows how to consider the presence of DC motors and gearings in the dynamic model. Finally, the main aspects relating dynamics and control are discussed briefly.

Course Outcomes

On successful completion, students will be able to

- to understand the dynamics of rigid bodies and the basic physical laws.
- to model the dynamics of robots based on the Lagrange and Newton approaches.
- to establish dynamic equations for the design, optimization, analysis of robots.
- to understand how robot control based on a dynamic model can be realized.

Contents

1. Basics
 - 1.1 Dynamics of a Rigid Body
 - 1.2 Classical Formulation
 - 1.3 Twist-Wrench Formulation
2. Lagrange Formulation
 - 2.1 Preliminaries
 - 2.2 General Formulation
 - 2.3 Properties
 - 2.4 Understanding the Dynamic Model

3. Newton-Euler Formulation
 - 3.1 Link Acceleration
 - 3.2 Recursive Algorithm
4. Forward and Inverse Dynamics
 - 4.1 Basic Concepts
 - 4.2 Forward Dynamics for Open Chains
 - 4.3 Newton-Euler Inverse Dynamics
 - 4.4 Dynamics in the Task Space
 - 4.5 Constrained Dynamics
 - 4.6 Robot Dynamics in the Universal Robot Description Framework
5. Actuation
 - 5.1 DC Motors and Gearings
 - 5.2 Friction
 - 5.3 Joint and Link Flexibility
6. Introduction to Motion Control
 - 6.1 The Control Problem
 - 6.2 Control in the Joint Space
 - 6.3 Control in the Operational Space

Collaborative Work

Course Code: DLBCSCW01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The course supports the students in building up and expanding important interdisciplinary competences for our networked world, and in doing so, students can take advantage of the opportunities for constructive cooperation with others. It presents essential forms and design possibilities of collaborative learning and working, imparts basic knowledge and tools for self-managed, flexible, and creative thinking, learning and acting and familiarizes students with the topics of empathy and emotional intelligence. Students are also encouraged to use the course contents. In this way, they promote their autonomous competence to act and their competence in the interactive application of tools and in interacting in heterogeneous groups.

Course Outcomes

On successful completion, students will be able to

- design their own learning processes both self-directed and collaborative with analog and digital media.
- initiate face-to-face and virtual cooperation and select suitable methods for shaping collaboration even in an intercultural context and across disciplinary boundaries.
- assess different forms of communication in relation to the goals and requirements of different situations and to reflect on their own communication and argumentation behavior in order to be able to shape conducive collaboration also in an interdisciplinary context.
- recognize social diversity including cultural and professional differences as a value, and to name and apply tools to deal with them constructively.
- explain conflict potentials and the role of emotions in conflicts and to describe the use of systemic methods in the target- and solution-oriented handling of conflicts.
- analyze one's own resources, present methods of self-leadership and self-motivation, and derive appropriate strategies.

Contents

1. Learning for a Networked World in a Networked World
 - 1.1 Requirements and Opportunities of the VUCA World
 - 1.2 Learning, Information, and Dealing with Knowledge and Ignorance
 - 1.3 C-Model: Collective – Collaborative – Continuous – Connected
 - 1.4 Checking Your Own Learning Behaviour

2. Networking and Cooperation
 - 2.1 Finding and Winning Suitable Cooperation Partners
 - 2.2 Sustainable Relationships: Digital Interaction and Building Trust
 - 2.3 Collaboration: Organizing Locally and Virtually and Using Media
 - 2.4 Social Learning: Agile, Collaborative, and Mobile Planning of Learning Processes
3. Performance in (Virtual) Teams
 - 3.1 Goals, Roles, Organization and Performance Measurement
 - 3.2 Team Building and Team Flow
 - 3.3 Scrum as a Framework for Agile Project Management
 - 3.4 Design Thinking, Kanban, Planning Poker, Working-in-Progress-Limits & Co
4. Communicate and Convince
 - 4.1 Communication as Social Interaction
 - 4.2 Language, Images, Metaphors, and Stories
 - 4.3 It's the Attitude that Counts: Open, Empathetic, and Appreciative Communication
 - 4.4 Listen Actively - Argue - Convince - Motivate
 - 4.5 Analyze Your Own Conversational and Argumentational Skills
5. Recognize Conflict Potentials - Handle Conflicts - Negotiate Effectively
 - 5.1 Respecting Diversity - Seizing Opportunities
 - 5.2 Developing Empathy for Yourself and Others
 - 5.3 Systemic Work Solutions and Reframing
 - 5.4 Negotiate Constructively: Finding Clear Words - Interests Instead of Positions
6. Realize Your Own Projects
 - 6.1 Set Goals Effectively - Focus - Reflect
 - 6.2 The Agile Use of One's Own Time
 - 6.3 (Self-)Coaching and Inner Team
 - 6.4 Strategies and Methods for Self-Management and Self-Motivation
7. Mobilize Your Resources
 - 7.1 Recognizing Resources - Regulating Emotions
 - 7.2 Reflection and Innovation - Lateral Thinking and Creativity
 - 7.3 Transfer Strength and Willpower: Analyzing and Controlling Condition Factors

Programming with C/C++

Course Code: DLBROEPRS01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

C and C++ belong to the class of programming languages which have been adopted in a broad field of applications, ranging from embedded systems (where they are dominant) to fast and reliable user interfaces and industrial applications. In fact, C++ is one of the most popular legacy programming languages for robotics, and a combination of C++ and robotics hardware is used in many leading industries. Knowledge on how to design in and write C/C++ code is an imperative capability for the practicing roboticist, especially in the industrial arena.

Course Outcomes

On successful completion, students will be able to

- know the main characteristics of C and C++ programming languages.
- apply C and C++ for programming of applications.
- apply C and C++ for programming of robotic systems.

Contents

- This course introduces the main aspects of C and C++ programming languages, such as data types, variables, arithmetic expressions, flow control, functions, classes, arrays, and pointers. The programming skills will then be applied to design parts of robotic systems based on popular hardware.

Mechatronic Systems

Course Code: DLBROMSY01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Numerous processes and products experience an increasing combination of traditional and advanced mechanics with electronics. Especially with information processing, this development leads to a so-called mechatronic system, with the purpose to improve overall performance. This course illustrates the development of mechatronics and focuses on some important aspects, such as modeling techniques (which are relevant for system simulation, design and optimization), common electric drives, machines and drivetrains, actuators and sensors.

Course Outcomes

On successful completion, students will be able to

- understand the basics of mathematical modeling of engineering systems.
- model and simulate common mechatronic systems.
- apply mechatronic systems for a given application.
- understand the basics of actuators, sensors, and system integration.

Contents

1. Introduction
 - 1.1 Mechatronic Systems
 - 1.2 Examples
2. Modeling
 - 2.1 Fundamental Equations
 - 2.2 Energy Balance
 - 2.3 Connection of Process Elements
 - 2.4 Dynamics of Mechanical Systems
 - 2.5 Mechanical Elements
3. Electrical Drives
 - 3.1 Electromagnets
 - 3.2 Direct Current Motors
 - 3.3 Alternating Current Motors

4. Machines and Drivetrains
 - 4.1 Complete Machines
 - 4.2 Characteristics and Stability of Machines
 - 4.3 Motors and Pumps
 - 4.4 Automobile Drivetrain
 - 4.5 Signal Energy
 - 4.6 Applications

5. Actuators and Sensors
 - 5.1 Basic Structures
 - 5.2 Electromechanical Drives
 - 5.3 Hydraulic Actuators
 - 5.4 Pneumatic Actuators
 - 5.5 Unconventional Actuators

Control Systems Engineering

Course Code: DLBROCSE01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	DLBROSS01_E

Course Description

Control systems are an integral part of modern society. They are omnipresent in mechatronics, robotics, production engineering, manufacturing processes, and medical technology. A control system is made of subsystems and processes assembled for the purpose of obtaining a desired output with desired performance, given a specified input. Control systems engineering is the discipline which analyzes systems, intended to enable the design of controllers which ensure the desired performance. This course introduces the concept of control systems and provides further understanding of systems in terms of their dynamical properties. In particular, the frequency-domain description of systems, given by the application of the Laplace Transform, is used to gain qualitative and quantitative insights into the behavior of linear time-invariant systems. The concept of frequency response is introduced in detail and is used to allow for the design of linear time-invariant feedback controllers to reach the desired performance.

Course Outcomes

On successful completion, students will be able to

- understand the components of a control system.
- analyze properties of systems in time and frequency domains.
- define dynamic and static requirements in time and frequency domains.
- analyze the stability of dynamic systems.
- understand and calculate the frequency-response of systems.
- design standard feedback controllers to achieve target performance.

Contents

1. Introduction to Control Systems
 - 1.1 Introduction and History
 - 1.2 Open-loop and Closed-loop Systems
 - 1.3 Design Objectives
 - 1.4 The Design Process
 - 1.5 Trends in Control Systems

2. Modeling in the Frequency Domain
 - 2.1 Laplace and Inverse Laplace Transform
 - 2.2 The Transfer Function
 - 2.3 Nonlinearities and Linearization
 - 2.4 Algebra of Block Diagrams
 - 2.5 Examples
3. Time Response
 - 3.1 Poles and Zeros
 - 3.2 First-order Systems
 - 3.3 Second-order Systems
 - 3.4 Higher-order Systems
 - 3.5 Effects of Nonlinearities
4. Stability
 - 4.1 Introduction to Stability
 - 4.2 Stability Criteria
5. Steady-state Errors
 - 5.1 Unity Feedback Systems
 - 5.2 Static Error Constants
 - 5.3 Steady-state Error Specifications
 - 5.4 Disturbances
 - 5.5 Non-unity Feedback Systems
 - 5.6 Sensitivity
6. The Root Locus
 - 6.1 Definition and Properties
 - 6.2 Sketching the Root Locus
 - 6.3 Design via Root Locus
7. The Frequency Response
 - 7.1 Introduction
 - 7.2 The Bode Plot
 - 7.3 The Nyquist Diagram
 - 7.4 Stability, Gain and Phase Margins

8. Design via Frequency Response
 - 8.1 Transient Response via Gain Adjustment
 - 8.2 PI Compensation
 - 8.3 Lag Compensation
 - 8.4 PD Compensation
 - 8.5 Lead Compensation
 - 8.6 Lead-Lag Compensation and PID compensation
 - 8.7 Design Limitations
 - 8.8 Time-Delay

Module Contents

Mathematical modeling of robots will be seen from a practical perspective. The students will learn how to build a static or dynamic model of robots in a simulation environment, to perform design, testing, and analysis activities.

Learning Outcomes**Project: Modeling and Simulation of Robots**

On successful completion, students will be able to

- perform simulation of dynamic systems.
- name issues related to the numeric simulation of continuous-time systems.
- implement the dynamic model of a robot in a simulation environment.
- generate and discuss valid simulation results .

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	DLBROMK01_E, DLBROMD01_E

Course Description

Mathematical modeling of robots is very important to be able to perform design and analysis. In the context of industrial internet of things, or Industry 4.0, the building of a so-called digital twin by means of simulation models is a central activity to many other processes, such as real-time optimization of tasks as well as fault-detection and diagnosis. In this course the students will learn how a mathematical model can be implemented in a simulation environment, to perform analysis, design, and optimization.

Course Outcomes

On successful completion, students will be able to

- perform simulation of dynamic systems.
- name issues related to the numeric simulation of continuous-time systems.
- implement the dynamic model of a robot in a simulation environment.
- generate and discuss valid simulation results .

Contents

- The course provides the basics in simulation of dynamic systems and implementation of simulation models in computer-aided simulation environments. A simulation model for industrial or mobile robots is built and students will learn how to perform analysis of the model, and use it for design optimization.

This course provides an introduction to the design of servo-level robot controllers. The students will learn how to set up a simulation model of a robot which considers the presence of actuators, sensors, and control systems. Standard control approaches will be tested and evaluated.

Learning Outcomes**Project: Introduction to Robot Control**

On successful completion, students will be able to

- understand the lower levels of a robot control system.
- name standard control approaches for robot motion.
- implement the controllers and evaluate the performance in simulation .

Project: Introduction to Robot Control

Course Code: DLBROPIRC01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	DLBROPMSR01_E

Course Description

Robot control allows a robot to perform the required task. Complex tasks, sometimes called missions, are subdivided into simpler subtasks that constitute elementary actions to be performed by the robot. The robot control system acts at different levels. This course focuses on the lower levels, which deal with the execution of elementary actions and are based on the real-time interaction of the robot system with the environment as well as with the actuators moving the joints. The students will learn how to implement and evaluate standard control approaches, such as Proportional-Integral-Derivative controllers, on a mathematical model of a robot.

Course Outcomes

On successful completion, students will be able to

- understand the lower levels of a robot control system.
- name standard control approaches for robot motion.
- implement the controllers and evaluate the performance in simulation .

Embedded Systems

Course Code: DLBROES01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Embedded systems are required to make functional engineering systems operational. Through embedding microprocessor-based systems capable of networking, data exchange and processing, the functionality of products and systems can be enhanced in terms of features, precision, accuracy, dynamic properties, and intelligence. In this sense, an embedded system is the place where everything begins. This course provides the basics on embedded systems, by focusing on the architectural patterns of modern systems and platforms. The embedded hardware and software aspects are addressed. An emphasis of this course is given to connectivity and networking aspects to build distributed systems for the internet of things and the industrial internet of things (with the final purpose of conceptualizing cyber-physical systems). The course closes with an overview on existing common embedded operating systems.

Course Outcomes

On successful completion, students will be able to

- understand the architecture of embedded systems.
- understand real-time embedded systems.
- design the main architecture of embedded systems for robotics, automation and IoT infrastructure.

Contents

1. Introduction
 - 1.1 Embedded Systems Design
 - 1.2 Embedded Systems Architecture
 - 1.3 Embedded Systems Models
 - 1.4 Standards, Compilers and Programming Languages
2. Embedded Hardware
 - 2.1 Schematics
 - 2.2 Basic Components
 - 2.3 Embedded Processors
 - 2.4 Board Memory
 - 2.5 Board I/O
 - 2.6 Buses

3. Embedded Software
 - 3.1 Device Drivers
 - 3.2 Scheduling Basics
 - 3.3 State Machines
 - 3.4 Interrupts
 - 3.5 Watchdogs
 - 3.6 Embedded Operating Systems
 - 3.7 Middleware
4. Distributed Systems and IoT Architecture
 - 4.1 Network Interfaces (Ethernet, WiFi, 6LoWPAN, Bluetooth...)
 - 4.2 The Internet Protocol
 - 4.3 Transport Layer Security
 - 4.4 Application Protocols (Message protocols, REST)
5. Embedded Operating Systems
 - 5.1 Task Management
 - 5.2 Scheduler
 - 5.3 Synchronization
 - 5.4 System Resource Separation
 - 5.5 Examples of Embedded Operating Systems

Course Description

The main steps to obtain a functioning robot are as follows: concept design, modeling simulation and testing of the concept, performance evaluation, optimization of the concept, prototyping, hardware and software implementation, and, finally, operation and performance assessment. In this course the students will learn all steps with emphasis on the realization, hardware and software implementation, either of a complete robot concept or of individual parts of a robot concept.

Course Outcomes

On successful completion, students will be able to

- design a concept for a functioning robot.
- select appropriate hardware and software tools.
- apply control concepts to existent hardware and software of embedded systems.

Contents

- This course provides the basics for the design, evaluation, and particularly the implementation in hardware and software of a working robot or parts of a robot.

In this course several aspects in the design field of human-robot interaction will be investigated, ranging from fundamentals (design basics, ethics) to application in robot design, such as finding metrics for the assessment of the emotional impact of a robot design, as well as ongoing and future developments (e.g., use of artificial intelligence).

Learning Outcomes**Seminar: Human-Robot Interaction**

On successful completion, students will be able to

- understand state-of-the-art human-robot interaction approaches and accompanying problems.
- name important design issues for social robots.
- measure the emotional component of robots.
- apply design patterns to develop social robots.

Course Description

Over the past few years, significant technological development has been made in the field of Robotics and Design. Whereas industrial robots have replaced a significant proportion of human workers in industrial environments, the last decades have witnessed the development of robots designed to work together with humans. With this developments Human-Robot Interaction, i.e., a robot design methodology which considers these interactions, has become a requirement. Robots are increasingly becoming a part of human lives and will impact human lives even more in the future. Innovative design approaches such as emotional design, based on pleasure and usability, are effective methods to develop innovative robots that can properly interact and communicate with humans, also at an emotional level. This course provides an overview on technological and design issues about “social robot design”.

Course Outcomes

On successful completion, students will be able to

- understand state-of-the-art human-robot interaction approaches and accompanying problems.
- name important design issues for social robots.
- measure the emotional component of robots.
- apply design patterns to develop social robots.

Contents

Project: Applied Robotics with Robotic Platforms

Course Code: DLBROPARRP01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In the last years several robotic software and hardware platforms have been developed. The existing diverse robotic systems provide an affordable and reliable basis to build next generation robots. Some of those systems are open source and constantly developed by the community of roboticists. Of course, such systems require a minimal understanding of robotics as well as of other robotics-related issues which are important in today's technical community, such as internet of things and communication interfaces. This course provides the basics to work with such robotic platforms for development, design and implementation of industrial and mobile robots.

Course Outcomes

On successful completion, students will be able to

- name several existing open-source robotic platforms.
- understand the basic principles of robotic platforms.
- work with existing robotic platforms.
- carry out a robotic project by means of robotic platforms.

Contents

- This course illustrates robotic platforms and their usage within robotics projects.

Safety of Industrial Plants and Machines

Course Code: DLBROSIPM01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In this course, students will get an overview of the Machinery Directive (Directive 2006/42/EC), which regulates the protective measures for complete and partial machines or systems concerning the prevention of accidents. Participants will gain necessary skills to put a machine on the market. This includes risk assessment and a subsequent declaration of conformity (for complete machines) or declaration of incorporation (for partial machines) in accordance with the Machinery Directive (Directive 2006/42/EC). The Declaration of Conformity or Declaration of Incorporation, in turn, is a prerequisite for acquiring the CE label for complete machines. It refers to protective measures not only for the operator, but also for the environment. In addition, students will be able to determine the Performance Level (PL) as part of risk assessment, a measure of the reliability of a safety function of security-related parts of the control system. The recommended measures must be implemented by both the manufacturer and the operator. All these security-related aspects are evaluated in risk assessment and appropriate measures are proposed or recommendations are made to reduce or avoid hazards.

Course Outcomes

On successful completion, students will be able to

- assess the need for product safety measures.
- assess the degree of compliance with the Machinery Directive (Directive 2006/42/EC).
- perform an FMEA.
- determine the Performance Level (PL).
- apply methods and processes for system analysis and avoid weak points preemptively.

Contents

1. Basics
 - 1.1 Safety Engineering
 - 1.2 Legal Aspects and Product Liability
2. EU Directives, Laws and Standards
 - 2.1 CE Label
 - 2.2 Machinery Directive (Directive 2006/42/EC)

3. Typical Methods for the Identification of Safety Concerns
 - 3.1 FMEA (Failure Mode and Effects Analysis)
 - 3.2 FTA (Fault Tree Analysis)
 - 3.3 Risk Assessment Following EN ISO 12100
4. Security-Related Sensor Technology
 - 4.1 Circuits and Logic
 - 4.2 Redundancy in Electrical, Pneumatic and Hydraulic Systems
5. Declaration of Conformity
 - 5.1 Performance Level (PL)
 - 5.2 Safety Integrity Level (SIL)
 - 5.3 Validation of Security-Related Systems

Handling Technology

Course Code: DLBROEIRA01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In handling, a defined orientation of a geometrically defined object is either created or maintained for a limited time. Typical handling devices, such as industrial robots or handling devices, are program-controlled. This course provides an overview of the standards of conventional handling technology. In addition, the knowledge of flexible handling technology is deepened, with a focus on characteristic pick and place applications and Gripper / Manipulator / Endeffector technology.

Course Outcomes

On successful completion, students will be able to

- assign terms and elements to conventional and flexible automated handling and assembly technology.
- analyze processes in handling.
- design methods for the development of assembly and handling tasks.
- influence component design through analysis, so that production-ready design can commence in the course of the construction phase.

Contents

1. Introduction
 - 1.1 Definitions
 - 1.2 Requirements
2. Handling Objects
 - 2.1 Component Regulations
 - 2.2 Component Actions (Stability/Movement Sequences)
 - 2.3 Handling-Oriented Component Design
 - 2.4 Design for manufacturing and assembly
3. Handling Procedures
 - 3.1 Functions
 - 3.2 Illustrations
 - 3.3 Functional Diagrams

4. Standard and Delivery Systems
 - 4.1 Memory
 - 4.2 Motion Systems
 - 4.3 Delivery
 - 4.4 Branching
 - 4.5 Sorting
 - 4.6 Allocation
 - 4.7 Safety Equipment
 - 4.8 Control Systems
5. Flexible Handling Technology
 - 5.1 Tasks and Types (IR, Cobot)
 - 5.2 Pick and Place
 - 5.3 Drives
 - 5.4 Gripper technology
6. Transfer Systems
 - 6.1 Workpiece Carrier
 - 6.2 Chaining
7. Security
 - 7.1 Technical Safety Requirements
 - 7.2 Malfunction During Operation

Automation Technology

Course Code: DLBROEIRA02_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Automation technology refers to the analysis, design and improvement of existing or new automation systems. Modern automation systems are characterized by the combination of many different devices, such as actuators, sensors, machines, which must be able to perform a coordinate action and to exchange data with each other. This course introduces such modern automation systems by listing their necessary components, presenting current challenges and trends and explaining communication technologies to build effective industrial automation networks. A brief overview on the topic of cyber-security is also given.

Course Outcomes

On successful completion, students will be able to

- understand modern automation systems.
- identify trends and challenges.
- design an industrial automation system for an application.
- name relevant cyber-security issues.

Contents

1. Introduction
 - 1.1 Evolution of Automation
 - 1.2 Industrial Revolutions
 - 1.3 Modern Automation Systems
 - 1.4 Challenges and Trends
2. An Introduction to Programmable Logic Controllers
 - 2.1 Hardware
 - 2.2 Internal Architecture
 - 2.3 I/O
 - 2.4 Ladder and Functional Block Programming
 - 2.5 Programming Methods
3. Batch Automation
 - 3.1 Basics
 - 3.2 Applications

4. SCADA Systems
 - 4.1 Overview
 - 4.2 Components
 - 4.3 Communication Technologies
 - 4.4 Interfaces
5. Industrial Communication Technologies
 - 5.1 Industrial Networks
 - 5.2 HART
 - 5.3 PROFIBUS
 - 5.4 Wireless Communication
 - 5.5 OPC
 - 5.6 Konnex (EIB/KNX)
 - 5.7 LonWorks®
6. Distributed Control System
 - 6.1 Evolution of Control Systems
 - 6.2 Components of Distributed Control Systems
7. Cyber Security in Industrial Automation
 - 7.1 Plant Control Network
 - 7.2 Cyber Attacks
 - 7.3 Common Industrial Software Weaknesses

Mobile Robotics

Course Code: DLBROESR01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Modern robots are mobile robots, able to move in spaces and perform tasks autonomously. This is for instance what is done by household robots, or by robots working in warehouses. In the last years, such robots have been improved by the implementation of advanced localization and task planning algorithms, which are based on the fundamentals of mobile robot kinematics and dynamics. This course starts with an introduction to the main concepts of robot locomotion, presenting the three main categories of mobile robots, namely legged, wheeled and aerial (often called drones). As second focus lies on the necessary mathematical foundation. This course, thus, discusses kinematics and dynamics of mobile robots. The topic of how a mobile robot can perceive the surrounding world is treated in detail in a third part of this course, where sensors for mobile robots are introduced together with an introduction on advanced topics such as robot vision and image processing. The last part of this course describes the main approaches for localization, mapping and motion and task planning. A brief overview on combination of mobile robots and manipulators, i.e., mobile manipulators, is also given.

Course Outcomes

On successful completion, students will be able to

- understand mobile robot locomotion, kinematics, and dynamics.
- model and simulate a wheeled, legged, or aerial mobile robot.
- understand common approaches for localization and mapping.
- apply and simulate path, motion, and task planning algorithms.
- simulate and understand mobile manipulators.

Contents

1. Locomotion
 - 1.1 Basics
 - 1.2 Legged Mobile Robots
 - 1.3 Wheeled Mobile Robots
 - 1.4 Aerial Mobile Robots

2. Kinematics
 - 2.1 Basics
 - 2.2 Kinematic Models and Constraints
 - 2.3 Mobile Robot Maneuverability
 - 2.4 Mobile Robot Workspace
 - 2.5 Applications
3. Dynamics
 - 3.1 Basics
 - 3.2 Dynamic Modeling
 - 3.3 Examples
4. Perception
 - 4.1 Sensors for Mobile Robots
 - 4.2 Position and Velocity Sensors
 - 4.3 Accelerometers
 - 4.4 Inertial Measurement Unit
 - 4.5 Distance Sensors
 - 4.6 Vision Sensors
 - 4.7 Robot Vision and Image Processing
 - 4.8 Global Positioning System
5. Mobile Manipulators
 - 5.1 Basics
 - 5.2 Modeling
 - 5.3 Examples
6. Path, Motion and Task Planning
 - 6.1 Basics
 - 6.2 Path Planning
 - 6.3 Motion Planning
 - 6.4 Task Planning

7. Localization and Mapping
 - 7.1 Sensor Imperfections
 - 7.2 Relative Localization
 - 7.3 Absolute Localization
 - 7.4 Localization, Calibration and Sensor Fusion
 - 7.5 Simultaneous Localization and Mapping
 - 7.6 Examples

Soft Robotics

Course Code: DLBROESR02_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Classic robots are made of rigid links and structures. In the last years, the field of robotics has been strongly influenced and inspired by biological processes. Instead of rigid structures, soft structures, materials, and surfaces are characterizing innovative, soft robots. This new generation of robots can be used in several applications where highly dynamic tasks must be performed in unsafe or rough environments, and especially where the interaction with humans is necessary. This course provides the basics in the fast-changing field of soft robotics, starting with an overview of materials and technologies for soft actuators, proceeding with an overview on innovative sensors, and concluding with an overview on modeling approaches for soft robots. The last part summarizes some relevant state-of-the-art applications.

Course Outcomes

On successful completion, students will be able to

- know the basics behind soft robots.
- understand and analyze common structures of soft robots.
- choose the best soft robot technology for a given application.

Contents

1. Introduction
 - 1.1 Soft Robots
 - 1.2 Challenges
 - 1.3 Trends
 - 1.4 Applications
2. Actuators
 - 2.1 Materials and Properties of Soft Actuators
 - 2.2 Thermo-driven Soft Actuators
 - 2.3 Electro-driven Soft Actuators
 - 2.4 Light-driven Soft Actuators
 - 2.5 Magneto-driven Soft Actuators
 - 2.6 Pneumatic Actuators
 - 2.7 Examples

3. Sensors
 - 3.1 Basics
 - 3.2 Proximity Sensing
 - 3.3 Mechano-sensing
 - 3.4 Examples
4. Modeling
 - 4.1 Artificial Muscles
 - 4.2 Interactions
 - 4.3 Compliance Control
 - 4.4 Variable-stiffness Actuators
5. Applications
 - 5.1 Soft Bionic Hands
 - 5.2 Healthcare and Surgery
 - 5.3 Underwater and Aquatic Propulsion
 - 5.4 Bio-inspired Aerial Robots

Module Contents**Digital Signal Processing**

- Signal sampling and quantization
- Digital signals and systems
- Discrete Fourier Transform
- z-Transform
- Digital signal processing and filters

Fundamentals of NLP and Computer Vision

- Introduction to Natural Language Processing
- Introduction to Computer Vision
- Applications to Robotics

Learning Outcomes**Digital Signal Processing**

On successful completion, students will be able to

- analyze discrete time systems.
- apply analysis tools such as the Discrete Fourier Transform.
- apply the z-Transform.
- analyze properties of discrete systems.
- design finite and infinite impulse response filters.
- implement filters in hardware and software.

Fundamentals of NLP and Computer Vision

On successful completion, students will be able to

- name central problems and challenges in natural language processing and computer vision.
- understand common methods used in natural language processing and computer vision.
- name common use-case scenarios in which NLP and computer vision techniques are applied.
- design basic language processing and computer vision solutions for use in robotics.

Digital Signal Processing

Course Code: DLBROEICR01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Digital signal processing enables digital audio and video extraction, as well as extraction of important features from any other kind of signal, for instance medical imagery or diagnostic tools. This course provides the students with expertise on the theory and practice of digital signal processing. In the first part, theoretical concepts are introduced, presenting the main tools for analysis of digital, i.e., sampled or discrete-time systems. The core of digital signal processing resides in the design of a digital filter. The second part of the course focuses on different filter-design approaches, i.e. a discussion on finite impulse response and infinite impulse response filters. The last part gives important insights into the hardware and software implementation of digital signal processing, bridging theory with applied practice.

Course Outcomes

On successful completion, students will be able to

- analyze discrete time systems.
- apply analysis tools such as the Discrete Fourier Transform.
- apply the z-Transform.
- analyze properties of discrete systems.
- design finite and infinite impulse response filters.
- implement filters in hardware and software.

Contents

1. Introduction
 - 1.1 Basic Concepts
 - 1.2 Applications
2. Signal Sampling and Quantization
 - 2.1 Sampling
 - 2.2 Signal reconstruction
 - 2.3 Analog-to-digital Conversion
 - 2.4 Digital-to-Analog Conversion
 - 2.5 Quantization

3. Digital Signals and Systems
 - 3.1 Digital Signals
 - 3.2 Difference Equations and Impulse Responses
 - 3.3 BIBO-Stability
 - 3.4 Digital Convolution
4. Discrete Fourier Transform
 - 4.1 Discrete Fourier Transform
 - 4.2 Amplitude and Power Spectrum
 - 4.3 Spectral Estimation
5. The z-Transform
 - 5.1 Definition
 - 5.2 Properties
 - 5.3 Inverse z-Transform
 - 5.4 Solution of Difference Equations
6. Digital Signal Processing Systems and Filters
 - 6.1 Difference Equation and Transfer Function
 - 6.2 Poles, Zeros and Stability
 - 6.3 Digital Filter Frequency Response
 - 6.4 Basic Filtering
 - 6.5 Realization of Digital Filters
 - 6.6 Applications
7. Finite Impulse Response Filter Design
 - 7.1 Basics
 - 7.2 Fourier Transform Design
 - 7.3 Window Method
 - 7.4 Frequency Sampling Design Method
 - 7.5 Optimal Design Method
 - 7.6 Applications

8. Infinite Impulse Response Filter Design
 - 8.1 Basics
 - 8.2 Bilinear Transformation Design Method
 - 8.3 Butterworth and Chebyshev Filter Designs
 - 8.4 Higher-Order Infinite Impulse Response Filter Design
 - 8.5 Pole-Zero Placement for Simple Filters
 - 8.6 Applications
9. Hardware and Software for Digital Signal Processing
 - 9.1 Digital Signal Processor Architecture
 - 9.2 Digital Signal Processor Hardware Units
 - 9.3 Fixed-Point and Floating-Point Formats
 - 9.4 Implementation of FIR and IIR Filters in Fixed-Point
 - 9.5 DSP Programming Examples

Fundamentals of NLP and Computer Vision

Course Code: DLBROEICR02_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Innovative robots, belonging to the so-called generation 3.0, need to sense and understand the environment in many ways, for instance using vision and language understanding and processing. This course introduces the topics of natural language processing (NLP) and computer vision, discussing the main techniques of both fields as well as their application in the field of robotics.

Course Outcomes

On successful completion, students will be able to

- name central problems and challenges in natural language processing and computer vision.
- understand common methods used in natural language processing and computer vision.
- name common use-case scenarios in which NLP and computer vision techniques are applied.
- design basic language processing and computer vision solutions for use in robotics.

Contents

1. Introduction to NLP
 - 1.1 History
 - 1.2 Basics Concepts of NLP
 - 1.3 Feature Extraction Methods
2. Applications of NLP
 - 2.1 Topic Modeling
 - 2.2 Text Summarization and Generation
 - 2.3 Sentiment Analysis
 - 2.4 Translation
 - 2.5 Chatbots
3. Introduction to Computer Vision
 - 3.1 Light and Color
 - 3.2 Image Formation
 - 3.3 Image Processing
 - 3.4 Image Feature Extraction
 - 3.5 Stereo Vision

4. Applications of Computer Vision
 - 4.1 Image Classification, Motion Tracking
 - 4.2 Semantic Segmentation
 - 4.3 Object Identification and Tracking
 - 4.4 Eigenfaces and Facial Recognition

5. NLP and Computer Vision in Robotics
 - 5.1 Camera Calibration
 - 5.2 Pose Estimation
 - 5.3 Visual Servoing
 - 5.4 Human-Robot Interaction
 - 5.5 Privacy Issues

Module Contents**Handling Technology**

- Industrial Handling
- Delivery systems
- End effector/manipulator /Gripper
- Material flow

Automation Technology

- Modern automation systems
- Programmable logic controllers
- Batch automation
- SCADA
- Industrial communications
- Distributed control systems
- Cyber-security

Learning Outcomes**Handling Technology**

On successful completion, students will be able to

- assign terms and elements to conventional and flexible automated handling and assembly technology.
- analyze processes in handling.
- design methods for the development of assembly and handling tasks.
- influence component design through analysis, so that production-ready design can commence in the course of the construction phase.

Automation Technology

On successful completion, students will be able to

- understand modern automation systems.
- identify trends and challenges.
- design an industrial automation system for an application.
- name relevant cyber-security issues.

Handling Technology

Course Code: DLBROEIRA01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In handling, a defined orientation of a geometrically defined object is either created or maintained for a limited time. Typical handling devices, such as industrial robots or handling devices, are program-controlled. This course provides an overview of the standards of conventional handling technology. In addition, the knowledge of flexible handling technology is deepened, with a focus on characteristic pick and place applications and Gripper / Manipulator / Endeffector technology.

Course Outcomes

On successful completion, students will be able to

- assign terms and elements to conventional and flexible automated handling and assembly technology.
- analyze processes in handling.
- design methods for the development of assembly and handling tasks.
- influence component design through analysis, so that production-ready design can commence in the course of the construction phase.

Contents

1. Introduction
 - 1.1 Definitions
 - 1.2 Requirements
2. Handling Objects
 - 2.1 Component Regulations
 - 2.2 Component Actions (Stability/Movement Sequences)
 - 2.3 Handling-Oriented Component Design
 - 2.4 Design for manufacturing and assembly
3. Handling Procedures
 - 3.1 Functions
 - 3.2 Illustrations
 - 3.3 Functional Diagrams

4. Standard and Delivery Systems
 - 4.1 Memory
 - 4.2 Motion Systems
 - 4.3 Delivery
 - 4.4 Branching
 - 4.5 Sorting
 - 4.6 Allocation
 - 4.7 Safety Equipment
 - 4.8 Control Systems
5. Flexible Handling Technology
 - 5.1 Tasks and Types (IR, Cobot)
 - 5.2 Pick and Place
 - 5.3 Drives
 - 5.4 Gripper technology
6. Transfer Systems
 - 6.1 Workpiece Carrier
 - 6.2 Chaining
7. Security
 - 7.1 Technical Safety Requirements
 - 7.2 Malfunction During Operation

Automation Technology

Course Code: DLBROEIRA02_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Automation technology refers to the analysis, design and improvement of existing or new automation systems. Modern automation systems are characterized by the combination of many different devices, such as actuators, sensors, machines, which must be able to perform a coordinate action and to exchange data with each other. This course introduces such modern automation systems by listing their necessary components, presenting current challenges and trends and explaining communication technologies to build effective industrial automation networks. A brief overview on the topic of cyber-security is also given.

Course Outcomes

On successful completion, students will be able to

- understand modern automation systems.
- identify trends and challenges.
- design an industrial automation system for an application.
- name relevant cyber-security issues.

Contents

1. Introduction
 - 1.1 Evolution of Automation
 - 1.2 Industrial Revolutions
 - 1.3 Modern Automation Systems
 - 1.4 Challenges and Trends
2. An Introduction to Programmable Logic Controllers
 - 2.1 Hardware
 - 2.2 Internal Architecture
 - 2.3 I/O
 - 2.4 Ladder and Functional Block Programming
 - 2.5 Programming Methods
3. Batch Automation
 - 3.1 Basics
 - 3.2 Applications

4. SCADA Systems
 - 4.1 Overview
 - 4.2 Components
 - 4.3 Communication Technologies
 - 4.4 Interfaces
5. Industrial Communication Technologies
 - 5.1 Industrial Networks
 - 5.2 HART
 - 5.3 PROFIBUS

Mobile Robotics

Course Code: DLBROESR01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Modern robots are mobile robots, able to move in spaces and perform tasks autonomously. This is for instance what is done by household robots, or by robots working in warehouses. In the last years, such robots have been improved by the implementation of advanced localization and task planning algorithms, which are based on the fundamentals of mobile robot kinematics and dynamics. This course starts with an introduction to the main concepts of robot locomotion, presenting the three main categories of mobile robots, namely legged, wheeled and aerial (often called drones). As second focus lies on the necessary mathematical foundation. This course, thus, discusses kinematics and dynamics of mobile robots. The topic of how a mobile robot can perceive the surrounding world is treated in detail in a third part of this course, where sensors for mobile robots are introduced together with an introduction on advanced topics such as robot vision and image processing. The last part of this course describes the main approaches for localization, mapping and motion and task planning. A brief overview on combination of mobile robots and manipulators, i.e., mobile manipulators, is also given.

Course Outcomes

On successful completion, students will be able to

- understand mobile robot locomotion, kinematics, and dynamics.
- model and simulate a wheeled, legged, or aerial mobile robot.
- understand common approaches for localization and mapping.
- apply and simulate path, motion, and task planning algorithms.
- simulate and understand mobile manipulators.

Contents

1. Locomotion
 - 1.1 Basics
 - 1.2 Legged Mobile Robots
 - 1.3 Wheeled Mobile Robots
 - 1.4 Aerial Mobile Robots

2. Kinematics
 - 2.1 Basics
 - 2.2 Kinematic Models and Constraints
 - 2.3 Mobile Robot Maneuverability
 - 2.4 Mobile Robot Workspace
 - 2.5 Applications
3. Dynamics
 - 3.1 Basics
 - 3.2 Dynamic Modeling
 - 3.3 Examples
4. Perception
 - 4.1 Sensors for Mobile Robots
 - 4.2 Position and Velocity Sensors
 - 4.3 Accelerometers
 - 4.4 Inertial Measurement Unit
 - 4.5 Distance Sensors
 - 4.6 Vision Sensors
 - 4.7 Robot Vision and Image Processing
 - 4.8 Global Positioning System
5. Mobile Manipulators
 - 5.1 Basics
 - 5.2 Modeling
 - 5.3 Examples
6. Path, Motion and Task Planning
 - 6.1 Basics
 - 6.2 Path Planning
 - 6.3 Motion Planning
 - 6.4 Task Planning

7. Localization and Mapping
 - 7.1 Sensor Imperfections
 - 7.2 Relative Localization
 - 7.3 Absolute Localization
 - 7.4 Localization, Calibration and Sensor Fusion
 - 7.5 Simultaneous Localization and Mapping
 - 7.6 Examples

Soft Robotics

Course Code: DLBROESR02_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Classic robots are made of rigid links and structures. In the last years, the field of robotics has been strongly influenced and inspired by biological processes. Instead of rigid structures, soft structures, materials, and surfaces are characterizing innovative, soft robots. This new generation of robots can be used in several applications where highly dynamic tasks must be performed in unsafe or rough environments, and especially where the interaction with humans is necessary. This course provides the basics in the fast-changing field of soft robotics, starting with an overview of materials and technologies for soft actuators, proceeding with an overview on innovative sensors, and concluding with an overview on modeling approaches for soft robots. The last part summarizes some relevant state-of-the-art applications.

Course Outcomes

On successful completion, students will be able to

- know the basics behind soft robots.
- understand and analyze common structures of soft robots.
- choose the best soft robot technology for a given application.

Contents

1. Introduction
 - 1.1 Soft Robots
 - 1.2 Challenges
 - 1.3 Trends
 - 1.4 Applications
2. Actuators
 - 2.1 Materials and Properties of Soft Actuators
 - 2.2 Thermo-driven Soft Actuators
 - 2.3 Electro-driven Soft Actuators
 - 2.4 Light-driven Soft Actuators
 - 2.5 Magneto-driven Soft Actuators
 - 2.6 Pneumatic Actuators
 - 2.7 Examples

3. Sensors
 - 3.1 Basics
 - 3.2 Proximity Sensing
 - 3.3 Mechano-sensing
 - 3.4 Examples
4. Modeling
 - 4.1 Artificial Muscles
 - 4.2 Interactions
 - 4.3 Compliance Control
 - 4.4 Variable-stiffness Actuators
5. Applications
 - 5.1 Soft Bionic Hands
 - 5.2 Healthcare and Surgery
 - 5.3 Underwater and Aquatic Propulsion
 - 5.4 Bio-inspired Aerial Robots

Module Contents**Digital Signal Processing**

- Signal sampling and quantization
- Digital signals and systems
- Discrete Fourier Transform
- z-Transform
- Digital signal processing and filters

Fundamentals of NLP and Computer Vision

- Introduction to Natural Language Processing
- Introduction to Computer Vision
- Applications to Robotics

Learning Outcomes**Digital Signal Processing**

On successful completion, students will be able to

- analyze discrete time systems.
- apply analysis tools such as the Discrete Fourier Transform.
- apply the z-Transform.
- analyze properties of discrete systems.
- design finite and infinite impulse response filters.
- implement filters in hardware and software.

Fundamentals of NLP and Computer Vision

On successful completion, students will be able to

- name central problems and challenges in natural language processing and computer vision.
- understand common methods used in natural language processing and computer vision.
- name common use-case scenarios in which NLP and computer vision techniques are applied.
- design basic language processing and computer vision solutions for use in robotics.

Digital Signal Processing

Course Code: DLBROEICR01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Digital signal processing enables digital audio and video extraction, as well as extraction of important features from any other kind of signal, for instance medical imagery or diagnostic tools. This course provides the students with expertise on the theory and practice of digital signal processing. In the first part, theoretical concepts are introduced, presenting the main tools for analysis of digital, i.e., sampled or discrete-time systems. The core of digital signal processing resides in the design of a digital filter. The second part of the course focuses on different filter-design approaches, i.e. a discussion on finite impulse response and infinite impulse response filters. The last part gives important insights into the hardware and software implementation of digital signal processing, bridging theory with applied practice.

Course Outcomes

On successful completion, students will be able to

- analyze discrete time systems.
- apply analysis tools such as the Discrete Fourier Transform.
- apply the z-Transform.
- analyze properties of discrete systems.
- design finite and infinite impulse response filters.
- implement filters in hardware and software.

Contents

1. Introduction
 - 1.1 Basic Concepts
 - 1.2 Applications
2. Signal Sampling and Quantization
 - 2.1 Sampling
 - 2.2 Signal reconstruction
 - 2.3 Analog-to-digital Conversion
 - 2.4 Digital-to-Analog Conversion
 - 2.5 Quantization

3. Digital Signals and Systems
 - 3.1 Digital Signals
 - 3.2 Difference Equations and Impulse Responses
 - 3.3 BIBO-Stability
 - 3.4 Digital Convolution
4. Discrete Fourier Transform
 - 4.1 Discrete Fourier Transform
 - 4.2 Amplitude and Power Spectrum
 - 4.3 Spectral Estimation
5. The z-Transform
 - 5.1 Definition
 - 5.2 Properties
 - 5.3 Inverse z-Transform
 - 5.4 Solution of Difference Equations
6. Digital Signal Processing Systems and Filters
 - 6.1 Difference Equation and Transfer Function
 - 6.2 Poles, Zeros and Stability
 - 6.3 Digital Filter Frequency Response
 - 6.4 Basic Filtering
 - 6.5 Realization of Digital Filters
 - 6.6 Applications
7. Finite Impulse Response Filter Design
 - 7.1 Basics
 - 7.2 Fourier Transform Design
 - 7.3 Window Method
 - 7.4 Frequency Sampling Design Method
 - 7.5 Optimal Design Method
 - 7.6 Applications

8. Infinite Impulse Response Filter Design
 - 8.1 Basics
 - 8.2 Bilinear Transformation Design Method
 - 8.3 Butterworth and Chebyshev Filter Designs
 - 8.4 Higher-Order Infinite Impulse Response Filter Design
 - 8.5 Pole-Zero Placement for Simple Filters
 - 8.6 Applications
9. Hardware and Software for Digital Signal Processing
 - 9.1 Digital Signal Processor Architecture
 - 9.2 Digital Signal Processor Hardware Units
 - 9.3 Fixed-Point and Floating-Point Formats
 - 9.4 Implementation of FIR and IIR Filters in Fixed-Point
 - 9.5 DSP Programming Examples

Fundamentals of NLP and Computer Vision

Course Code: DLBROEICR02_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Innovative robots, belonging to the so-called generation 3.0, need to sense and understand the environment in many ways, for instance using vision and language understanding and processing. This course introduces the topics of natural language processing (NLP) and computer vision, discussing the main techniques of both fields as well as their application in the field of robotics.

Course Outcomes

On successful completion, students will be able to

- name central problems and challenges in natural language processing and computer vision.
- understand common methods used in natural language processing and computer vision.
- name common use-case scenarios in which NLP and computer vision techniques are applied.
- design basic language processing and computer vision solutions for use in robotics.

Contents

1. Introduction to NLP
 - 1.1 History
 - 1.2 Basics Concepts of NLP
 - 1.3 Feature Extraction Methods
2. Applications of NLP
 - 2.1 Topic Modeling
 - 2.2 Text Summarization and Generation
 - 2.3 Sentiment Analysis
 - 2.4 Translation
 - 2.5 Chatbots
3. Introduction to Computer Vision
 - 3.1 Light and Color
 - 3.2 Image Formation
 - 3.3 Image Processing
 - 3.4 Image Feature Extraction
 - 3.5 Stereo Vision

4. Applications of Computer Vision
 - 4.1 Image Classification, Motion Tracking
 - 4.2 Semantic Segmentation
 - 4.3 Object Identification and Tracking
 - 4.4 Eigenfaces and Facial Recognition

5. NLP and Computer Vision in Robotics
 - 5.1 Camera Calibration
 - 5.2 Pose Estimation
 - 5.3 Visual Servoing
 - 5.4 Human-Robot Interaction
 - 5.5 Privacy Issues

Artificial Intelligence

Course Code: DLBDSEAIS01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The quest for artificial intelligence (AI) has captured humanity's interest for many decades and has been an active research area since the 1960s. This course will give a detailed overview of the historical developments, successes, and set-backs in AI, as well as modern approaches in the development of artificial intelligence. This course gives an introduction to reinforcement learning, a process similar to how humans and animals experience the world: exploring the environment and inferring the best course of action. This course also covers the principles of natural language processing and computer vision, both of which are key ingredients for an artificial intelligence to be able to interact with its environment.

Course Outcomes

On successful completion, students will be able to

- chart the historical developments in artificial intelligence.
- understand the approach of contemporary AI systems.
- comprehend the concepts behind reinforcement learning.
- analyze natural language using basic NLP techniques.
- scrutinize images and their contents.

Contents

1. History of AI
 - 1.1 Historical developments
 - 1.2 AI winter
 - 1.3 Expert systems
 - 1.4 Notable advances
2. Modern AI Systems
 - 2.1 Narrow versus general AI
 - 2.2 Application areas
3. Reinforcement Learning
 - 3.1 What is reinforcement learning?
 - 3.2 Markov Chains and value function
 - 3.3 Time-difference and Q Learning

4. Natural Language Processing (NLP)
 - 4.1 Introduction to NLP and application areas
 - 4.2 Basic NLP techniques
 - 4.3 Vectorizing data
5. Computer Vision
 - 5.1 Pixels and filters
 - 5.2 Feature detection
 - 5.3 Distortions and calibration
 - 5.4 Semantic segmentation

Project: Artificial Intelligence

Course Code: DLBDSEAIS02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This project course will give students hands-on experience in the challenging task of designing and developing an AI system for a specific application and domain. Students will need to consider requirements and practical constraints as well as the desired output of the AI system. Following this course the students will get holistic overview of developing a specific AI-based application.

Course Outcomes

On successful completion, students will be able to

- determine the requirements for building an artificial intelligence system.
- evaluate an application for an AI system.
- transfer theoretically-sound and practically-proven methods and tools to an application domain.
- create an AI system for a chosen application.

Contents

- This project course focuses on understanding and implementing a simple AI system. Based on the course Artificial Intelligence (DLBDSEAI01), students will design and implement a simple AI system. In the first step, students will choose a specific application and domain and then use the methods from the course to analyze the requirements and outcomes before implementing their own AI application. All relevant artifacts and considerations are documented by the students in a course portfolio.

Module Contents**Self-Driving Vehicles**

- Safety standards
- Sensor fusion
- Computer vision
- Localization & motion
- Motion planning

Seminar: Current Topics and Trends in Self-Driving Technology

The seminar covers current topics of autonomous vehicles. The choice of topics can include (but are not limited to) recent technical advances as well as philosophical issues or implications for society, law, or relevant industries.

Learning Outcomes**Self-Driving Vehicles**

On successful completion, students will be able to

- cite relevant safety standards.
- grasp the concepts of sensors and sensor fusion.
- apply computer vision techniques to detect features.
- evaluate images in terms of semantic segmentation.
- understand motion models and localization approaches.
- utilize motion planning techniques.

Seminar: Current Topics and Trends in Self-Driving Technology

On successful completion, students will be able to

- transfer theoretical knowledge and methods to new domains.
- understand recent developments in self-driving vehicles.
- create new insights based on detailed studies of current research and technology.

Self-Driving Vehicles

Course Code: DLBDSEAD01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course focuses on the foundations of autonomous vehicles and starts with a detailed introduction to relevant safety standards in terms of functional and IT security. This course continues with a presentation of the concept of sensor fusion and discusses relevant aspects of computer vision techniques such as feature detection, calibration, and semantic segmentation. A large part of the course concerns localization and motion planning. Relevant motion models are introduced and localization techniques such as odometry, triangulation, and satellite-based systems are discussed in detail, along with path planning, motion prediction, and trajectory generation.

Course Outcomes

On successful completion, students will be able to

- cite relevant safety standards.
- grasp the concepts of sensors and sensor fusion.
- apply computer vision techniques to detect features.
- evaluate images in terms of semantic segmentation.
- understand motion models and localization approaches.
- utilize motion planning techniques.

Contents

1. Sensors
 - 1.1 Physical principles of sensors
 - 1.2 Types of sensors
 - 1.3 Sensor calibration
 - 1.4 Application scenarios
2. Sensor Fusion
 - 2.1 Elaborating data from sensors
 - 2.2 Kalman filter
 - 2.3 Object tracking

3. Computer Vision
 - 3.1 Pixels and filters
 - 3.2 Feature detection
 - 3.3 Distortions and calibration
 - 3.4 Semantic segmentation
4. Localization & Motion
 - 4.1 Motion models
 - 4.2 Odometry
 - 4.3 Triangulation
 - 4.4 Satellite-based localization
5. Motion planning
 - 5.1 Path planning
 - 5.2 Motion prediction
 - 5.3 Trajectory generation
6. Safety Standards
 - 6.1 Functional Safety
 - 6.2 IT Security Standards
 - 6.3 Safety development approaches

Seminar: Current Topics and Trends in Self-Driving Technology

Course Code: DLBDSEAD02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course focuses on recent developments in the field of self-driving vehicles. Following the course Self-Driving Vehicles (DLBDSEAD01), in this course students will focus on a particular topic in the context of autonomous driving, applying the knowledge they have obtained in the first course. Finally, a research essay will be written.

Course Outcomes

On successful completion, students will be able to

- transfer theoretical knowledge and methods to new domains.
- understand recent developments in self-driving vehicles.
- create new insights based on detailed studies of current research and technology.

Contents

- The seminar covers current topics of autonomous vehicles. The choice of topics can include (but are not limited to) recent technical advances as well as philosophical issues or implications for society, law, or relevant industries.

Data Analytics and Big Data

- Introduction to Data Analysis
- Statistical Basics
- Data Mining
- Big Data Methods and Technologies
- Legal Aspects of Data Analysis
- Solution Scenarios
- Application of Big Data in the Industry

Deep Learning

- Introduction
- Introduction to Neural Networks
- Training Neural Networks
- Introduction to Deep Learning Frameworks
- Classification and Optimization
- Multilayer Neural Networks
- Convolutional Neural Networks

Learning Outcomes**Data Analytics and Big Data**

On successful completion, students will be able to

- distinguish between information and data and know the meaning of these terms for decision-making.
- derive the Big Data issue, especially in connection with Internet of Things, and describe it using examples.
- identify basics from statistics, which are necessary for the analysis of large data sets.
- identify the process of data mining and classify different methods in it.
- identify selected methods and technologies that are used in the Big Data context and apply them to simple examples.
- recognize the legal framework for the application of data analysis in Germany and internationally.
- identify the specific prospects and challenges of applying Big Data analyses in industry.

Deep Learning

On successful completion, students will be able to

- place concepts of deep learning in the context of machine learning and artificial intelligence.
- define different types of regression and explain the implementation of logistic regression with perceptrons.
- explain the structure and function of simple neural networks.
- explain concepts and interrelationships in training of neural networks and to partially implement these concepts.
- differentiate between deep learning frameworks.
- implement, train and optimize neural networks with the help of a Deep Learning Framework
- understand the structure and functioning of Convolutional Neural Networks and train them using a Deep Learning Framework.

Data Analytics and Big Data

Course Code: DLBINGDABD01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The aim of the course is to familiarize students with selected methods and techniques of data analysis in the context of continuously increasing, heterogeneous data sets. To this end, the fundamental relevance of Big Data methods is presented by drawing on the historical development of stored data. One decisive factor here is the continuous transmission Internet of Things sensor data to other systems. This is followed by a short introduction to the essential statistical fundamentals before the individual steps of the data mining process are discussed. In distinction to these classical procedures, selected methods are presented with which stored data in the Big Data context can be made analyzable. As data analysis is subject to certain legal frameworks, this course also covers legal aspects such as data protection. The course concludes with an overview of the practical application of Big Data methods and tools. In particular, fields of application in the industrial context are examined.

Course Outcomes

On successful completion, students will be able to

- distinguish between information and data and know the meaning of these terms for decision-making.
- derive the Big Data issue, especially in connection with Internet of Things, and describe it using examples.
- identify basics from statistics, which are necessary for the analysis of large data sets.
- identify the process of data mining and classify different methods in it.
- identify selected methods and technologies that are used in the Big Data context and apply them to simple examples.
- recognize the legal framework for the application of data analysis in Germany and internationally.
- identify the specific prospects and challenges of applying Big Data analyses in industry.

Contents

1. Introduction to Data Analysis
 - 1.1 Decisions, Information, Data
 - 1.2 Historical Development of Data Storage and Evaluation
 - 1.3 Big Data: Features and Examples
 - 1.4 Data Analysis
 - 1.5 Internet of Things as Driver for Big Data

2. Statistical Basics
 - 2.1 Descriptive Data Analysis
 - 2.2 Inferential Data Analysis
 - 2.3 Explorative Data Analysis
 - 2.4 Multivariate Data Analysis
3. Data Mining
 - 3.1 Knowledge Discovery in Databases
 - 3.2 Association Analysis
 - 3.3 Correlation Analysis
 - 3.4 Forecast
 - 3.5 Cluster Analysis
 - 3.6 Classification
4. Big Data Methods and Technologies
 - 4.1 Technology Building Blocks
 - 4.2 MapReduce
 - 4.3 Text- and Semantic Analysis
 - 4.4 Audio and Video Analysis
 - 4.5 BASE and NoSQL
 - 4.6 In-Memory Databases
 - 4.7 Big Data Success Factors
5. Legal Aspects of Data Analysis
 - 5.1 Data Protection Principles in Germany
 - 5.2 Anonymization and Pseudonymization
 - 5.3 International Data Analysis
 - 5.4 Performance and Integrity Protection
6. Solution Scenarios
7. Application of Big Data in the Industry
 - 7.1 Production and Logistics
 - 7.2 Increased Efficiency in the Supply Chain
 - 7.3 Key-Factor Data
 - 7.4 Examples and Conclusion

Deep Learning

Course Code: DLBDBDL01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Owing to recent technological advances, some concepts and methods from artificial intelligence can now be applied in practice. A major concept affected by this progress are neural networks. Thanks to fast and inexpensive GPUs on the one hand and freely available and well-documented frameworks on the other hand, neural networks are used today to solve many different problems, from pattern recognition in text and images to the automated assessment of insurance claims. In this course, students are introduced to the basics of this technology and enabled to apply it using simple examples.

Course Outcomes

On successful completion, students will be able to

- place concepts of deep learning in the context of machine learning and artificial intelligence.
- define different types of regression and explain the implementation of logistic regression with perceptrons.
- explain the structure and function of simple neural networks.
- explain concepts and interrelationships in training of neural networks and to partially implement these concepts.
- differentiate between deep learning frameworks.
- implement, train and optimize neural networks with the help of a Deep Learning Framework
- understand the structure and functioning of Convolutional Neural Networks and train them using a Deep Learning Framework.

Contents

1. Introduction
 - 1.1 AI
 - 1.2 Machine Learning
 - 1.3 Deep Learning
 - 1.4 Deep Learning Frameworks
2. Introduction to Neural Networks
 - 2.1 Linear Regression
 - 2.2 Logistic Regression
 - 2.3 Perceptrons
 - 2.4 Types of Perceptrons

3. Training Neural Networks
 - 3.1 Mean Square Deviation
 - 3.2 Gradient Method
 - 3.3 Multilayer Perceptron
 - 3.4 Backpropagation
 - 3.5 Implementing Backpropagation
4. Introduction to Deep Learning Frameworks
 - 4.1 Overview
 - 4.2 First Steps with Tensorflow
 - 4.3 Basic Concepts
 - 4.4 Mathematical Functions
5. Classification and Optimization
 - 5.1 Linear Classifier
 - 5.2 Cost Functions
 - 5.3 Parameter Configuration and Cross-Validation
 - 5.4 Stochastic Gradient Descent
 - 5.5 Mini-Batching
 - 5.6 Epochs
6. Multilayer Neural Networks
 - 6.1 Introduction and Motivation
 - 6.2 Structure and Mathematics
 - 6.3 Implementation with Tensorflow
 - 6.4 Adaptation of Existing Models
 - 6.5 Over-Adaptation and Possible Solutions
7. Convolutional Neural Networks
 - 7.1 Motivation and Fields of Application
 - 7.2 Structure
 - 7.3 CNNs for Text Analysis
 - 7.4 CNNs for Image Analysis

Module Contents

Object oriented and functional programming in Python

This course introduces the students to the advanced programming concepts of object orientation and functional programming and how they are realized in the Python programming language.

Data Science Software Engineering

- Traditional project management
- Agile project management
- Testing
- Software development paradigms
- From model to production

Learning Outcomes

Object oriented and functional programming in Python

On successful completion, students will be able to

- explain basic notions in object-oriented programming such as functions and classes.
- understand object-oriented programming concepts and their relation to software design and engineering.
- describe advanced function concepts in Python.
- recognize important ideas from functional programming.
- recall important libraries for functional programming in Python.

Data Science Software Engineering

On successful completion, students will be able to

- understand the concept of project management approaches.
- apply agile approaches in software development.
- create automated software tests.
- understand various software development paradigms.
- evaluate the necessary steps to bring models into a production environment.

Object oriented and functional programming in Python

Course Code: DLBDSOOFPP01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course builds upon basic knowledge of Python programming (Introduction to Programming with Python, DLBDSIPWP) and is concerned with the exposition of advanced Python programming concepts. To this end, important notions of object-oriented programming like classes and objects and pertaining design principles are outlined. Starting from an in-depth discussion of advanced features of Python functions, functional programming concepts and their implementation in Python are conveyed.

Course Outcomes

On successful completion, students will be able to

- explain basic notions in object-oriented programming such as functions and classes.
- understand object-oriented programming concepts and their relation to software design and engineering.
- describe advanced function concepts in Python.
- recognize important ideas from functional programming.
- recall important libraries for functional programming in Python.

Contents

- This course provides students with a thorough introduction to important notions and concepts from the domain of object-oriented programming such as classes, objects, abstraction, encapsulation, inheritance, polymorphism, composition, and delegation. Additionally, the functional programming paradigm and pertaining ideas like functions as first class objects, decorators, pure functions, immutability and higher order functions are conveyed. Pursuant to the portfolio course type, the aforementioned concepts and ideas are explored by hands-on programming projects.

Data Science Software Engineering

Course Code: DLBDSSE01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	DLBDSIPWP01 or DLBDSIPWP01_D; DLBDSOOFPP01 or IOBP01

Course Description

A core part of data science is creating value from data. This means not only the creation of sophisticated predictive models but also the development of these models according to modern software development principles. This course gives a detailed overview of the relevant methods and paradigms which data scientists need to know in order to develop enterprise-grade models. This course discusses traditional and agile project management techniques, highlighting both the Kanban and Scrum approaches. It explores relevant software development paradigms such as test-driven development, pair programming, mob programming, and extreme programming. Special focus is given to the topic of testing and the consideration of how to bring a model into a production environment.

Course Outcomes

On successful completion, students will be able to

- understand the concept of project management approaches.
- apply agile approaches in software development.
- create automated software tests.
- understand various software development paradigms.
- evaluate the necessary steps to bring models into a production environment.

Contents

1. Traditional Project Management
 - 1.1 Requirements engineering
 - 1.2 Waterfall model
 - 1.3 Rational unified process
2. Agile Project Management
 - 2.1 Criticism of the waterfall model
 - 2.2 Introduction to SCRUM
 - 2.3 Introduction to Kanban

3. Testing
 - 3.1 Why testing?
 - 3.2 Unit tests
 - 3.3 Integration tests
 - 3.4 Performance monitoring
4. Software Development Paradigms
 - 4.1 Test-driven development (TDD)
 - 4.2 Pair programming
 - 4.3 Mob programming
 - 4.4 Extreme programming
5. From Model to Production
 - 5.1 Continuous delivery
 - 5.2 Continuous integration
 - 5.3 Building a scalable environment

Module Contents**Introduction to Data Protection and Cyber Security**

- Fundamentals of IT Security
- Data Protection
- IT Security Management
- Network and Communication Security

Cryptography

- Protection targets, vulnerabilities, and threats
- Foundations of cryptology and its core components
- Basic cryptographic applications
- Authentication
- Single computer security
- Security communication network
- Security E-Commerce
- Secure software development

Learning Outcomes**Introduction to Data Protection and Cyber Security**

On successful completion, students will be able to

- explain the terms and concepts of IT security and know the typical procedures and techniques which exist in each area.
- cite the legal regulations on data protection and explain their implementation.
- discuss in-depth IT security management and suitable measures for implementation.
- use their overview knowledge of activities and strategies for IT security in software and system development.

Cryptography

On successful completion, students will be able to

- give an overview of different classes of cryptographic systems.
- give a basic description of symmetric cryptographic methods, in particular One-Time Pad, DES, and AES, and describe their operating principles by means of simple, concrete examples.
- describe the basic hash functions.
- describe basic asymmetric cryptographic methods, especially RSA, and their operating principles by means of simple, concrete examples.
- describe the areas of application of cryptographic procedures and their application scenarios.

Introduction to Data Protection and Cyber Security

Course Code: DLBCSIDPITS01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In this course, the students are familiarized with important concepts from the field of IT security. Basic terms are introduced and discussed, and typical application fields, areas of IT security application, and typical procedures and techniques are introduced and described.

Course Outcomes

On successful completion, students will be able to

- explain the terms and concepts of IT security and know the typical procedures and techniques which exist in each area.
- cite the legal regulations on data protection and explain their implementation.
- discuss in-depth IT security management and suitable measures for implementation.
- use their overview knowledge of activities and strategies for IT security in software and system development.

Contents

1. Fundamentals of Data Protection and Cyber Security
 - 1.1 Conceptual Bases, Protection Goals
 - 1.2 Attacks and Threats
 - 1.3 Security Strategy
 - 1.4 Legal Regulations
2. Data Protection
 - 2.1 Data Protection as a Personal Right
 - 2.2 Basic Principles of Data Protection
 - 2.3 EU General Data Protection Regulation
 - 2.4 Further International Regulations on Data Protection
 - 2.5 Cross-Border Data Flow
 - 2.6 Data Protection in Everyday Life

3. Basic Functions of Cyber Security and Their Implementation
 - 3.1 Identification and Authentication
 - 3.2 Rights Management
 - 3.3 Rights Check
 - 3.4 Preservation of Evidence
4. Cyber Security Management
 - 4.1 Basic Concepts and Standards in Cyber Security Management
 - 4.2 Series of Standards ISO 2700x
5. Cyber Security Management in Everyday Life
 - 5.1 Password Management
 - 5.2 Data Backup
 - 5.3 Email Security
 - 5.4 Protection Against Viruses and Other Malware
 - 5.5 Protection Against Social Engineering Attacks
6. Network and Communication Security
 - 6.1 Firewall Technology
 - 6.2 Network Separation
 - 6.3 Security in WLAN, Mobile Networks, Bluetooth, and NFC
7. Cyber Security in the Development of Software and Systems
 - 7.1 Protection of the Development Environment
 - 7.2 Secure Development
 - 7.3 Common Criteria

Cryptography

Course Code: DLBCSCT01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course covers basic and targeted in-depth knowledge of cryptographic processes and the practical use of cryptographic systems. After an overview of cryptographic methods, hash functions, symmetric methods, and asymmetric methods are presented. The theoretical basics of selected procedures are taught and practically explained using simple examples. In addition, areas of application and application scenarios for cryptographic procedures are presented.

Course Outcomes

On successful completion, students will be able to

- give an overview of different classes of cryptographic systems.
- give a basic description of symmetric cryptographic methods, in particular One-Time Pad, DES, and AES, and describe their operating principles by means of simple, concrete examples.
- describe the basic hash functions.
- describe basic asymmetric cryptographic methods, especially RSA, and their operating principles by means of simple, concrete examples.
- describe the areas of application of cryptographic procedures and their application scenarios.

Contents

1. Protection Goals, Vulnerabilities, and Threats
 - 1.1 Protection Goals
 - 1.2 Vulnerabilities and Threats
2. Foundations of Cryptology and its Core Components
 - 2.1 Encoding
 - 2.2 Symmetrical Encryption
 - 2.3 Asymmetric Encryption
 - 2.4 One-way Functions and Cryptographic Hash Functions

3. Basic Cryptographic Applications
 - 3.1 Key exchange and Hybrid Processes
 - 3.2 Digital Signature
 - 3.3 Message Authentication Code
 - 3.4 Steganographic Methods
4. Authentication
 - 4.1 Passwords and Public-Key-Certificates
 - 4.2 Challenge-Response-Procedure and Zero-Knowledge-Procedure
 - 4.3 Biometric Methods
 - 4.4 Authentication in Distributed Systems
 - 4.5 Identities Through Smartcards
5. Security of Single Computers
 - 5.1 Malware and Cookies
 - 5.2 Some Special Features of Operating Systems
 - 5.3 Web Server Security
6. Security in Communication Networks
 - 6.1 Security Problems and Defense Concepts
 - 6.2 Internet Standards for Communication Security
 - 6.3 Identity and Anonymity
 - 6.4 Security in Mobile and Wireless Communications
7. Security in E-Commerce
 - 7.1 Email Security
 - 7.2 Online Banking and Online Payments
 - 7.3 Electronic Money
8. Secure Software Development
 - 8.1 Threat Modeling
 - 8.2 Secure Software Design
 - 8.3 Techniques for Safe Programming

Module Contents**Mobile Software Engineering**

- Basics of Mobile Software Development
- Android System Architecture
- Programming Environment
- Core Components of Android Apps
- Interaction between Application Components
- Advanced Methods

Project: Mobile Software Engineering

Design, implementation and documentation of small, mobile applications based on a specific example.

Learning Outcomes**Mobile Software Engineering**

On successful completion, students will be able to

- recognize and describe the variances and specific features of software development for mobile systems.
- distinguish between different activities, parts and risks in the creation, operation and maintenance of mobile software systems .
- explain and differentiate the architecture and technical features of the Android Platform.
- autonomously create mobile software systems to solve concrete problems for the Android Platform .

Project: Mobile Software Engineering

On successful completion, students will be able to

- autonomously design and prototype small mobile applications to solve a specific task.
- identify typical problems and challenges in the practical implementation of small mobile applications.
- document the creation and implementation of small, autonomously designed and implemented mobile applications .

Mobile Software Engineering

Course Code: IWMB01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Using the mobile platform Android as an example, the course explains how the programming of mobile applications (Apps) differs from the development of browser-based information systems, gives an overview of technologies and programming concepts deployed and describes common challenges in the development of apps for industrial applications.

Course Outcomes

On successful completion, students will be able to

- recognize and describe the variances and specific features of software development for mobile systems.
- distinguish between different activities, parts and risks in the creation, operation and maintenance of mobile software systems .
- explain and differentiate the architecture and technical features of the Android Platform.
- autonomously create mobile software systems to solve concrete problems for the Android Platform .

Contents

1. Basics of Mobile Software Development
 - 1.1 Special Features of Mobile Devices
 - 1.2 Special Features of Mobile Software Development
 - 1.3 Classification of Mobile Devices
 - 1.4 The Android Platform
2. Android System Architecture
 - 2.1 The Android System
 - 2.2 Security Features
 - 2.3 Communication with Networks
3. Programming Environment
 - 3.1 Android Studio
 - 3.2 First App and Emulator Test
 - 3.3 Application Deployment

4. Core Components of Android Apps
 - 4.1 Overview of Android App Components
 - 4.2 Activities, Layouts and Views
 - 4.3 Resources
 - 4.4 Summary in an App
 - 4.5 Graphic Design
5. Interaction between Application Components
 - 5.1 Intents
 - 5.2 Services
 - 5.3 Broadcast Receive
6. Advanced Methods
 - 6.1 Threading
 - 6.2 Application memory

Project: Mobile Software Engineering

Course Code: IWMB02_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

With the material conveyed in the course "Mobile Software Engineering Using the Android Platform as an Example", students autonomously create a mobile application and document its design and implementation.

Course Outcomes

On successful completion, students will be able to

- autonomously design and prototype small mobile applications to solve a specific task.
- identify typical problems and challenges in the practical implementation of small mobile applications.
- document the creation and implementation of small, autonomously designed and implemented mobile applications .

Contents

- Design, implementation and documentation of small, mobile applications based on a specific example. Possible topics are, for example:
 - A radio app to improve the exchange between listeners and station in general, and particularly between listeners and radio presenters.
 - An app that allows a group of board game fans to better organize their regular evening game schedule.
 - An app that enables the supervisors of assignments at IUBH to improve their support procedures.

Module Contents

Certificate Course Italian

To learn and deepen Italian as a foreign language at the chosen CEFR level with regard to the respective qualitative aspects of range, correctness, fluency, interaction and coherence. The module includes a combination of listening, comprehension, writing and speaking exercises as well as various course material.

Foreign Language Italian

To learn and deepen Italian as a foreign language at the chosen CEFR level with regard to the respective qualitative aspects of range, correctness, fluency, interaction and coherence. The module includes a combination of listening, comprehension, writing and speaking exercises as well as various course material.

Learning Outcomes

Certificate Course Italian

On successful completion, students will be able to

- meet the qualification objectives according to the chosen level (A1, A2, B1 or B2) according to the criteria of the Common European Framework of Reference for Languages (CEFR).
- use the foreign language Italian according to a CEFR placement test on the basis of everyday topics, selected areas of specialization and by adapting basic and advanced grammatical structures.

Foreign Language Italian

On successful completion, students will be able to

- meet the qualification objectives according to the chosen level (A1, A2, B1 or B2) according to the criteria of the Common European Framework of Reference for Languages (CEFR).
- use the foreign language Italian according to a CEFR placement test on the basis of everyday topics, selected areas of specialization and by adapting basic and advanced grammatical structures.

Certificate Course Italian

Course Code: DLFSWI01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The qualification objectives correspond to levels A1, A2, B1 and B2 according to the criteria of the Common European Framework of Reference for Languages (CEFR). Using everyday subject areas, chosen areas of specialization, and using basic and advanced grammatical structures, the use of Italian as a foreign language is taught and practiced according to a CEFR placement test. Upon successful completion, students will receive a certificate corresponding to their chosen level.

Course Outcomes

On successful completion, students will be able to

- meet the qualification objectives according to the chosen level (A1, A2, B1 or B2) according to the criteria of the Common European Framework of Reference for Languages (CEFR).
- use the foreign language Italian according to a CEFR placement test on the basis of everyday topics, selected areas of specialization and by adapting basic and advanced grammatical structures.

Contents

- Depending on the CEFR placement, students will be proficient
 - to understand and use familiar, everyday expressions and very simple phrases aimed at satisfying concrete needs. They can introduce themselves and others and ask other people questions about themselves - e.g. where they live, what kind of people they know or what kind of things they have - and they can give answers to questions of this kind. They can communicate in a simple way if the person they are talking to speaks slowly and clearly and is willing to help. (Level A1)
 - to understand sentences and frequently used expressions related to areas of immediate importance (e.g. personal and family information, shopping, work, local area). You can communicate in simple, routine situations involving a simple and direct exchange of information about familiar things. You can describe by simple means your own background and education, immediate environment and things related to immediate needs. (Level A2)
 - to understand the main points when clear standard language is used and when it's about familiar things from work, school, leisure, etc. You can handle most situations encountered while traveling in the language area. You can express yourself simply and coherently on familiar topics and personal areas of interest. You can talk about experiences and events, describe dreams, hopes and goals, and give brief reasons or explanations for plans and opinions. (Level B1)

- to understand the main content of complex texts on concrete and abstract topics; and to understand specialist discussions in their own area of specialization. You can communicate so spontaneously and fluently that a normal conversation with native speakers is quite possible without major effort on either side. You can express yourself clearly and in detail on a wide range of topics, explain a point of view on a topical issue and state the advantages and disadvantages of various options. (Level B2)
- Grammar:
 - Level A1 - present and past tenses, sentence structure, prepositions, etc.
 - Level A2 - among other things tenses of the past, differences in the past tenses, imperative, subordinate clauses, pronouns (dative, accusative)
 - Level B1 - including introduction of past perfect, conjunctions, introduction of passive voice, adverbs, adjectives (difference), future tense
 - Level B2 - among others verb constructions, conditional clauses, indirect speech

You can describe by simple means your own background and education, immediate environment and things related to immediate needs. (Level A2)
 - to understand the main points when clear standard language is used and when it's about familiar things from work, school, leisure, etc. You can handle most situations encountered while traveling in the language area. You can express yourself simply and coherently on familiar topics and personal areas of interest. You can talk about experiences and events, describe dreams, hopes and goals, and give brief reasons or explanations for plans and opinions. (Level B1)

- to understand the main content of complex texts on concrete and abstract topics; and to understand specialist discussions in their own area of specialization. You can communicate so spontaneously and fluently that a normal conversation with native speakers is quite possible without major effort on either side. You can express yourself clearly and in detail on a wide range of topics, explain a point of view on a topical issue and state the advantages and disadvantages of various options. (Level B2)
- Grammar:
 - Level A1 - present and past tenses, sentence structure, prepositions, etc.
 - Level A2 - among other things tenses of the past, differences in the past tenses, imperative, subordinate clauses, pronouns (dative, accusative)
 - Level B1 - including introduction of past perfect, conjunctions, introduction of passive voice, adverbs, adjectives (difference), future tense
 - Level B2 - among others verb constructions, conditional clauses, indirect speech

Foreign Language German

Course Code: DLFGS01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The qualification objectives correspond to levels A1, A2, B1 and B2 according to the criteria of the Common European Framework of Reference for Languages (CEFR). Using everyday subject areas, chosen areas of specialization, and using basic and advanced grammatical structures, the use of German as a foreign language is taught and practiced according to a CEFR placement test.

Course Outcomes

On successful completion, students will be able to

- meet the qualification objectives according to the chosen level (A1, A2, B1 or B2) according to the criteria of the Common European Framework of Reference for Languages (CEFR).
- use the foreign language German according to a CEFR placement test on the basis of everyday topics, selected areas of specialization and by adapting basic and advanced grammatical structures.

Contents

- Depending on the CEFR placement, students will be proficient
 - to understand and use familiar, everyday expressions and very simple phrases aimed at satisfying concrete needs. They can introduce themselves and others and ask other people questions about themselves - e.g. where they live, what kind of people they know or what kind of things they have - and they can give answers to questions of this kind. They can communicate in a simple way if the person they are talking to speaks slowly and clearly and is willing to help. (Level A1)
 - to understand sentences and frequently used expressions related to areas of immediate importance (e.g. personal and family information, shopping, work, local area). You can communicate in simple, routine situations involving a simple and direct exchange of information about familiar things. You can describe by simple means your own background and education, immediate environment and things related to immediate needs. (Level A2)
 - to understand the main points when clear standard language is used and when it's about familiar things from work, school, leisure, etc. You can handle most situations encountered while traveling in the language area. You can express yourself simply and coherently on familiar topics and personal areas of interest. You can talk about experiences and events, describe dreams, hopes and goals, and give brief reasons or explanations for plans and opinions. (Level B1)

Module Contents**Handling Technology**

- Industrial Handling
- Delivery systems
- End effector/manipulator /Gripper
- Material flow

Automation Technology

- Modern automation systems
- Programmable logic controllers
- Batch automation
- SCADA
- Industrial communications
- Distributed control systems
- Cyber-security

Learning Outcomes**Handling Technology**

On successful completion, students will be able to

- assign terms and elements to conventional and flexible automated handling and assembly technology.
- analyze processes in handling.
- design methods for the development of assembly and handling tasks.
- influence component design through analysis, so that production-ready design can commence in the course of the construction phase.

Automation Technology

On successful completion, students will be able to

- understand modern automation systems.
- identify trends and challenges.
- design an industrial automation system for an application.
- name relevant cyber-security issues.

Handling Technology

Course Code: DLBROEIRA01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In handling, a defined orientation of a geometrically defined object is either created or maintained for a limited time. Typical handling devices, such as industrial robots or handling devices, are program-controlled. This course provides an overview of the standards of conventional handling technology. In addition, the knowledge of flexible handling technology is deepened, with a focus on characteristic pick and place applications and Gripper / Manipulator / Endeffector technology.

Course Outcomes

On successful completion, students will be able to

- assign terms and elements to conventional and flexible automated handling and assembly technology.
- analyze processes in handling.
- design methods for the development of assembly and handling tasks.
- influence component design through analysis, so that production-ready design can commence in the course of the construction phase.

Contents

1. Introduction
 - 1.1 Definitions
 - 1.2 Requirements
2. Handling Objects
 - 2.1 Component Regulations
 - 2.2 Component Actions (Stability/Movement Sequences)
 - 2.3 Handling-Oriented Component Design
 - 2.4 Design for manufacturing and assembly
3. Handling Procedures
 - 3.1 Functions
 - 3.2 Illustrations
 - 3.3 Functional Diagrams

4. Standard and Delivery Systems
 - 4.1 Memory
 - 4.2 Motion Systems
 - 4.3 Delivery
 - 4.4 Branching
 - 4.5 Sorting
 - 4.6 Allocation
 - 4.7 Safety Equipment
 - 4.8 Control Systems

5. Flexible Handling Technology
 - 5.1 Tasks and Types (IR, Cobot)
 - 5.2 Pick and Place
 - 5.3 Drives
 - 5.4 Gripper technology

6. Transfer Systems
 - 6.1 Workpiece Carrier
 - 6.2 Chaining

7. Security
 - 7.1 Technical Safety Requirements
 - 7.2 Malfunction During Operation

Automation Technology

Course Code: DLBROEIRA02_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Automation technology refers to the analysis, design and improvement of existing or new automation systems. Modern automation systems are characterized by the combination of many different devices, such as actuators, sensors, machines, which must be able to perform a coordinate action and to exchange data with each other. This course introduces such modern automation systems by listing their necessary components, presenting current challenges and trends and explaining communication technologies to build effective industrial automation networks. A brief overview on the topic of cyber-security is also given.

Course Outcomes

On successful completion, students will be able to

- understand modern automation systems.
- identify trends and challenges.
- design an industrial automation system for an application.
- name relevant cyber-security issues.

Contents

1. Introduction
 - 1.1 Evolution of Automation
 - 1.2 Industrial Revolutions
 - 1.3 Modern Automation Systems
 - 1.4 Challenges and Trends
2. An Introduction to Programmable Logic Controllers
 - 2.1 Hardware
 - 2.2 Internal Architecture
 - 2.3 I/O
 - 2.4 Ladder and Functional Block Programming
 - 2.5 Programming Methods
3. Batch Automation
 - 3.1 Basics
 - 3.2 Applications

4. SCADA Systems
 - 4.1 Overview
 - 4.2 Components
 - 4.3 Communication Technologies
 - 4.4 Interfaces
5. Industrial Communication Technologies

Mobile Robotics

Course Code: DLBROESR01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Modern robots are mobile robots, able to move in spaces and perform tasks autonomously. This is for instance what is done by household robots, or by robots working in warehouses. In the last years, such robots have been improved by the implementation of advanced localization and task planning algorithms, which are based on the fundamentals of mobile robot kinematics and dynamics. This course starts with an introduction to the main concepts of robot locomotion, presenting the three main categories of mobile robots, namely legged, wheeled and aerial (often called drones). As second focus lies on the necessary mathematical foundation. This course, thus, discusses kinematics and dynamics of mobile robots. The topic of how a mobile robot can perceive the surrounding world is treated in detail in a third part of this course, where sensors for mobile robots are introduced together with an introduction on advanced topics such as robot vision and image processing. The last part of this course describes the main approaches for localization, mapping and motion and task planning. A brief overview on combination of mobile robots and manipulators, i.e., mobile manipulators, is also given.

Course Outcomes

On successful completion, students will be able to

- understand mobile robot locomotion, kinematics, and dynamics.
- model and simulate a wheeled, legged, or aerial mobile robot.
- understand common approaches for localization and mapping.
- apply and simulate path, motion, and task planning algorithms.
- simulate and understand mobile manipulators.

Contents

1. Locomotion
 - 1.1 Basics
 - 1.2 Legged Mobile Robots
 - 1.3 Wheeled Mobile Robots
 - 1.4 Aerial Mobile Robots

2. Kinematics
 - 2.1 Basics
 - 2.2 Kinematic Models and Constraints
 - 2.3 Mobile Robot Maneuverability
 - 2.4 Mobile Robot Workspace
 - 2.5 Applications
3. Dynamics
 - 3.1 Basics
 - 3.2 Dynamic Modeling
 - 3.3 Examples
4. Perception
 - 4.1 Sensors for Mobile Robots
 - 4.2 Position and Velocity Sensors
 - 4.3 Accelerometers
 - 4.4 Inertial Measurement Unit
 - 4.5 Distance Sensors
 - 4.6 Vision Sensors
 - 4.7 Robot Vision and Image Processing
 - 4.8 Global Positioning System
5. Mobile Manipulators
 - 5.1 Basics
 - 5.2 Modeling
 - 5.3 Examples
6. Path, Motion and Task Planning
 - 6.1 Basics
 - 6.2 Path Planning
 - 6.3 Motion Planning
 - 6.4 Task Planning

7. Localization and Mapping
 - 7.1 Sensor Imperfections
 - 7.2 Relative Localization
 - 7.3 Absolute Localization
 - 7.4 Localization, Calibration and Sensor Fusion
 - 7.5 Simultaneous Localization and Mapping
 - 7.6 Examples

Soft Robotics

Course Code: DLBROESR02_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Classic robots are made of rigid links and structures. In the last years, the field of robotics has been strongly influenced and inspired by biological processes. Instead of rigid structures, soft structures, materials, and surfaces are characterizing innovative, soft robots. This new generation of robots can be used in several applications where highly dynamic tasks must be performed in unsafe or rough environments, and especially where the interaction with humans is necessary. This course provides the basics in the fast-changing field of soft robotics, starting with an overview of materials and technologies for soft actuators, proceeding with an overview on innovative sensors, and concluding with an overview on modeling approaches for soft robots. The last part summarizes some relevant state-of-the-art applications.

Course Outcomes

On successful completion, students will be able to

- know the basics behind soft robots.
- understand and analyze common structures of soft robots.
- choose the best soft robot technology for a given application.

Contents

1. Introduction
 - 1.1 Soft Robots
 - 1.2 Challenges
 - 1.3 Trends
 - 1.4 Applications
2. Actuators
 - 2.1 Materials and Properties of Soft Actuators
 - 2.2 Thermo-driven Soft Actuators
 - 2.3 Electro-driven Soft Actuators
 - 2.4 Light-driven Soft Actuators
 - 2.5 Magneto-driven Soft Actuators
 - 2.6 Pneumatic Actuators
 - 2.7 Examples

3. Sensors
 - 3.1 Basics
 - 3.2 Proximity Sensing
 - 3.3 Mechano-sensing
 - 3.4 Examples
4. Modeling
 - 4.1 Artificial Muscles
 - 4.2 Interactions
 - 4.3 Compliance Control
 - 4.4 Variable-stiffness Actuators
5. Applications
 - 5.1 Soft Bionic Hands
 - 5.2 Healthcare and Surgery
 - 5.3 Underwater and Aquatic Propulsion
 - 5.4 Bio-inspired Aerial Robots

Digital Signal Processing

- Signal sampling and quantization
- Digital signals and systems
- Discrete Fourier Transform
- z-Transform
- Digital signal processing and filters

Fundamentals of NLP and Computer Vision

- Introduction to Natural Language Processing
- Introduction to Computer Vision
- Applications to Robotics

Learning Outcomes

Digital Signal Processing

On successful completion, students will be able to

- analyze discrete time systems.
- apply analysis tools such as the Discrete Fourier Transform.
- apply the z-Transform.
- analyze properties of discrete systems.
- design finite and infinite impulse response filters.
- implement filters in hardware and software.

Fundamentals of NLP and Computer Vision

On successful completion, students will be able to

- name central problems and challenges in natural language processing and computer vision.
- understand common methods used in natural language processing and computer vision.
- name common use-case scenarios in which NLP and computer vision techniques are applied.
- design basic language processing and computer vision solutions for use in robotics.

Digital Signal Processing

Course Code: DLBROEICR01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Digital signal processing enables digital audio and video extraction, as well as extraction of important features from any other kind of signal, for instance medical imagery or diagnostic tools. This course provides the students with expertise on the theory and practice of digital signal processing. In the first part, theoretical concepts are introduced, presenting the main tools for analysis of digital, i.e., sampled or discrete-time systems. The core of digital signal processing resides in the design of a digital filter. The second part of the course focuses on different filter-design approaches, i.e. a discussion on finite impulse response and infinite impulse response filters. The last part gives important insights into the hardware and software implementation of digital signal processing, bridging theory with applied practice.

Course Outcomes

On successful completion, students will be able to

- analyze discrete time systems.
- apply analysis tools such as the Discrete Fourier Transform.
- apply the z-Transform.
- analyze properties of discrete systems.
- design finite and infinite impulse response filters.
- implement filters in hardware and software.

Contents

1. Introduction
 - 1.1 Basic Concepts
 - 1.2 Applications
2. Signal Sampling and Quantization
 - 2.1 Sampling
 - 2.2 Signal reconstruction
 - 2.3 Analog-to-digital Conversion
 - 2.4 Digital-to-Analog Conversion
 - 2.5 Quantization

3. Digital Signals and Systems
 - 3.1 Digital Signals
 - 3.2 Difference Equations and Impulse Responses
 - 3.3 BIBO-Stability
 - 3.4 Digital Convolution
4. Discrete Fourier Transform
 - 4.1 Discrete Fourier Transform
 - 4.2 Amplitude and Power Spectrum
 - 4.3 Spectral Estimation
5. The z-Transform
 - 5.1 Definition
 - 5.2 Properties
 - 5.3 Inverse z-Transform
 - 5.4 Solution of Difference Equations
6. Digital Signal Processing Systems and Filters
 - 6.1 Difference Equation and Transfer Function
 - 6.2 Poles, Zeros and Stability
 - 6.3 Digital Filter Frequency Response
 - 6.4 Basic Filtering
 - 6.5 Realization of Digital Filters
 - 6.6 Applications
7. Finite Impulse Response Filter Design
 - 7.1 Basics
 - 7.2 Fourier Transform Design
 - 7.3 Window Method
 - 7.4 Frequency Sampling Design Method
 - 7.5 Optimal Design Method
 - 7.6 Applications

8. Infinite Impulse Response Filter Design
 - 8.1 Basics
 - 8.2 Bilinear Transformation Design Method
 - 8.3 Butterworth and Chebyshev Filter Designs
 - 8.4 Higher-Order Infinite Impulse Response Filter Design
 - 8.5 Pole-Zero Placement for Simple Filters
 - 8.6 Applications
9. Hardware and Software for Digital Signal Processing
 - 9.1 Digital Signal Processor Architecture
 - 9.2 Digital Signal Processor Hardware Units
 - 9.3 Fixed-Point and Floating-Point Formats
 - 9.4 Implementation of FIR and IIR Filters in Fixed-Point
 - 9.5 DSP Programming Examples

Fundamentals of NLP and Computer Vision

Course Code: DLBROEICR02_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Innovative robots, belonging to the so-called generation 3.0, need to sense and understand the environment in many ways, for instance using vision and language understanding and processing. This course introduces the topics of natural language processing (NLP) and computer vision, discussing the main techniques of both fields as well as their application in the field of robotics.

Course Outcomes

On successful completion, students will be able to

- name central problems and challenges in natural language processing and computer vision.
- understand common methods used in natural language processing and computer vision.
- name common use-case scenarios in which NLP and computer vision techniques are applied.
- design basic language processing and computer vision solutions for use in robotics.

Contents

1. Introduction to NLP
 - 1.1 History
 - 1.2 Basics Concepts of NLP
 - 1.3 Feature Extraction Methods
2. Applications of NLP
 - 2.1 Topic Modeling
 - 2.2 Text Summarization and Generation
 - 2.3 Sentiment Analysis
 - 2.4 Translation
 - 2.5 Chatbots
3. Introduction to Computer Vision
 - 3.1 Light and Color
 - 3.2 Image Formation
 - 3.3 Image Processing
 - 3.4 Image Feature Extraction
 - 3.5 Stereo Vision

4. Applications of Computer Vision
 - 4.1 Image Classification, Motion Tracking
 - 4.2 Semantic Segmentation
 - 4.3 Object Identification and Tracking
 - 4.4 Eigenfaces and Facial Recognition

5. NLP and Computer Vision in Robotics
 - 5.1 Camera Calibration
 - 5.2 Pose Estimation
 - 5.3 Visual Servoing
 - 5.4 Human-Robot Interaction
 - 5.5 Privacy Issues

Artificial Intelligence

Course Code: DLBDSEAIS01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The quest for artificial intelligence (AI) has captured humanity's interest for many decades and has been an active research area since the 1960s. This course will give a detailed overview of the historical developments, successes, and set-backs in AI, as well as modern approaches in the development of artificial intelligence. This course gives an introduction to reinforcement learning, a process similar to how humans and animals experience the world: exploring the environment and inferring the best course of action. This course also covers the principles of natural language processing and computer vision, both of which are key ingredients for an artificial intelligence to be able to interact with its environment.

Course Outcomes

On successful completion, students will be able to

- chart the historical developments in artificial intelligence.
- understand the approach of contemporary AI systems.
- comprehend the concepts behind reinforcement learning.
- analyze natural language using basic NLP techniques.
- scrutinize images and their contents.

Contents

1. History of AI
 - 1.1 Historical developments
 - 1.2 AI winter
 - 1.3 Expert systems
 - 1.4 Notable advances
2. Modern AI Systems
 - 2.1 Narrow versus general AI
 - 2.2 Application areas
3. Reinforcement Learning
 - 3.1 What is reinforcement learning?
 - 3.2 Markov Chains and value function
 - 3.3 Time-difference and Q Learning

4. Natural Language Processing (NLP)
 - 4.1 Introduction to NLP and application areas
 - 4.2 Basic NLP techniques
 - 4.3 Vectorizing data
5. Computer Vision
 - 5.1 Pixels and filters
 - 5.2 Feature detection
 - 5.3 Distortions and calibration
 - 5.4 Semantic segmentation

Project: Artificial Intelligence

Course Code: DLBDSEAIS02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This project course will give students hands-on experience in the challenging task of designing and developing an AI system for a specific application and domain. Students will need to consider requirements and practical constraints as well as the desired output of the AI system. Following this course the students will get holistic overview of developing a specific AI-based application.

Course Outcomes

On successful completion, students will be able to

- determine the requirements for building an artificial intelligence system.
- evaluate an application for an AI system.
- transfer theoretically-sound and practically-proven methods and tools to an application domain.
- create an AI system for a chosen application.

Contents

- This project course focuses on understanding and implementing a simple AI system. Based on the course Artificial Intelligence (DLBDSEAI01), students will design and implement a simple AI system. In the first step, students will choose a specific application and domain and then use the methods from the course to analyze the requirements and outcomes before implementing their own AI application. All relevant artifacts and considerations are documented by the students in a course portfolio.

Self-Driving Vehicles

Course Code: DLBDSEAD01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course focuses on the foundations of autonomous vehicles and starts with a detailed introduction to relevant safety standards in terms of functional and IT security. This course continues with a presentation of the concept of sensor fusion and discusses relevant aspects of computer vision techniques such as feature detection, calibration, and semantic segmentation. A large part of the course concerns localization and motion planning. Relevant motion models are introduced and localization techniques such as odometry, triangulation, and satellite-based systems are discussed in detail, along with path planning, motion prediction, and trajectory generation.

Course Outcomes

On successful completion, students will be able to

- cite relevant safety standards.
- grasp the concepts of sensors and sensor fusion.
- apply computer vision techniques to detect features.
- evaluate images in terms of semantic segmentation.
- understand motion models and localization approaches.
- utilize motion planning techniques.

Contents

1. Sensors
 - 1.1 Physical principles of sensors
 - 1.2 Types of sensors
 - 1.3 Sensor calibration
 - 1.4 Application scenarios
2. Sensor Fusion
 - 2.1 Elaborating data from sensors
 - 2.2 Kalman filter
 - 2.3 Object tracking

3. Computer Vision
 - 3.1 Pixels and filters
 - 3.2 Feature detection
 - 3.3 Distortions and calibration
 - 3.4 Semantic segmentation
4. Localization & Motion
 - 4.1 Motion models
 - 4.2 Odometry
 - 4.3 Triangulation
 - 4.4 Satellite-based localization
5. Motion planning
 - 5.1 Path planning
 - 5.2 Motion prediction
 - 5.3 Trajectory generation
6. Safety Standards
 - 6.1 Functional Safety
 - 6.2 IT Security Standards
 - 6.3 Safety development approaches

Seminar: Current Topics and Trends in Self-Driving Technology

Course Code: DLBDSEAD02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course focuses on recent developments in the field of self-driving vehicles. Following the course Self-Driving Vehicles (DLBDSEAD01), in this course students will focus on a particular topic in the context of autonomous driving, applying the knowledge they have obtained in the first course. Finally, a research essay will be written.

Course Outcomes

On successful completion, students will be able to

- transfer theoretical knowledge and methods to new domains.
- understand recent developments in self-driving vehicles.
- create new insights based on detailed studies of current research and technology.

Contents

- The seminar covers current topics of autonomous vehicles. The choice of topics can include (but are not limited to) recent technical advances as well as philosophical issues or implications for society, law, or relevant industries.

Data Analytics and Big Data

- Introduction to Data Analysis
- Statistical Basics
- Data Mining
- Big Data Methods and Technologies
- Legal Aspects of Data Analysis
- Solution Scenarios
- Application of Big Data in the Industry

Deep Learning

- Introduction
- Introduction to Neural Networks
- Training Neural Networks
- Introduction to Deep Learning Frameworks
- Classification and Optimization
- Multilayer Neural Networks
- Convolutional Neural Networks

Learning Outcomes**Data Analytics and Big Data**

On successful completion, students will be able to

- distinguish between information and data and know the meaning of these terms for decision-making.
- derive the Big Data issue, especially in connection with Internet of Things, and describe it using examples.
- identify basics from statistics, which are necessary for the analysis of large data sets.
- identify the process of data mining and classify different methods in it.
- identify selected methods and technologies that are used in the Big Data context and apply them to simple examples.
- recognize the legal framework for the application of data analysis in Germany and internationally.
- identify the specific prospects and challenges of applying Big Data analyses in industry.

Deep Learning

On successful completion, students will be able to

- place concepts of deep learning in the context of machine learning and artificial intelligence.
- define different types of regression and explain the implementation of logistic regression with perceptrons.
- explain the structure and function of simple neural networks.
- explain concepts and interrelationships in training of neural networks and to partially implement these concepts.
- differentiate between deep learning frameworks.
- implement, train and optimize neural networks with the help of a Deep Learning Framework
- understand the structure and functioning of Convolutional Neural Networks and train them using a Deep Learning Framework.

Data Analytics and Big Data

Course Code: DLBINGDABD01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The aim of the course is to familiarize students with selected methods and techniques of data analysis in the context of continuously increasing, heterogeneous data sets. To this end, the fundamental relevance of Big Data methods is presented by drawing on the historical development of stored data. One decisive factor here is the continuous transmission Internet of Things sensor data to other systems. This is followed by a short introduction to the essential statistical fundamentals before the individual steps of the data mining process are discussed. In distinction to these classical procedures, selected methods are presented with which stored data in the Big Data context can be made analyzable. As data analysis is subject to certain legal frameworks, this course also covers legal aspects such as data protection. The course concludes with an overview of the practical application of Big Data methods and tools. In particular, fields of application in the industrial context are examined.

Course Outcomes

On successful completion, students will be able to

- distinguish between information and data and know the meaning of these terms for decision-making.
- derive the Big Data issue, especially in connection with Internet of Things, and describe it using examples.
- identify basics from statistics, which are necessary for the analysis of large data sets.
- identify the process of data mining and classify different methods in it.
- identify selected methods and technologies that are used in the Big Data context and apply them to simple examples.
- recognize the legal framework for the application of data analysis in Germany and internationally.
- identify the specific prospects and challenges of applying Big Data analyses in industry.

Contents

1. Introduction to Data Analysis
 - 1.1 Decisions, Information, Data
 - 1.2 Historical Development of Data Storage and Evaluation
 - 1.3 Big Data: Features and Examples
 - 1.4 Data Analysis
 - 1.5 Internet of Things as Driver for Big Data

2. Statistical Basics
 - 2.1 Descriptive Data Analysis
 - 2.2 Inferential Data Analysis
 - 2.3 Explorative Data Analysis
 - 2.4 Multivariate Data Analysis
3. Data Mining
 - 3.1 Knowledge Discovery in Databases
 - 3.2 Association Analysis
 - 3.3 Correlation Analysis
 - 3.4 Forecast
 - 3.5 Cluster Analysis
 - 3.6 Classification
4. Big Data Methods and Technologies
 - 4.1 Technology Building Blocks
 - 4.2 MapReduce
 - 4.3 Text- and Semantic Analysis
 - 4.4 Audio and Video Analysis
 - 4.5 BASE and NoSQL
 - 4.6 In-Memory Databases
 - 4.7 Big Data Success Factors
5. Legal Aspects of Data Analysis
 - 5.1 Data Protection Principles in Germany
 - 5.2 Anonymization and Pseudonymization
 - 5.3 International Data Analysis
 - 5.4 Performance and Integrity Protection
6. Solution Scenarios
7. Application of Big Data in the Industry
 - 7.1 Production and Logistics
 - 7.2 Increased Efficiency in the Supply Chain
 - 7.3 Key-Factor Data
 - 7.4 Examples and Conclusion

Deep Learning

Course Code: DLBDBDL01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Owing to recent technological advances, some concepts and methods from artificial intelligence can now be applied in practice. A major concept affected by this progress are neural networks. Thanks to fast and inexpensive GPUs on the one hand and freely available and well-documented frameworks on the other hand, neural networks are used today to solve many different problems, from pattern recognition in text and images to the automated assessment of insurance claims. In this course, students are introduced to the basics of this technology and enabled to apply it using simple examples.

Course Outcomes

On successful completion, students will be able to

- place concepts of deep learning in the context of machine learning and artificial intelligence.
- define different types of regression and explain the implementation of logistic regression with perceptrons.
- explain the structure and function of simple neural networks.
- explain concepts and interrelationships in training of neural networks and to partially implement these concepts.
- differentiate between deep learning frameworks.
- implement, train and optimize neural networks with the help of a Deep Learning Framework
- understand the structure and functioning of Convolutional Neural Networks and train them using a Deep Learning Framework.

Contents

1. Introduction
 - 1.1 AI
 - 1.2 Machine Learning
 - 1.3 Deep Learning
 - 1.4 Deep Learning Frameworks
2. Introduction to Neural Networks
 - 2.1 Linear Regression
 - 2.2 Logistic Regression
 - 2.3 Perceptrons
 - 2.4 Types of Perceptrons

3. Training Neural Networks
 - 3.1 Mean Square Deviation
 - 3.2 Gradient Method
 - 3.3 Multilayer Perceptron
 - 3.4 Backpropagation
 - 3.5 Implementing Backpropagation
4. Introduction to Deep Learning Frameworks
 - 4.1 Overview
 - 4.2 First Steps with Tensorflow
 - 4.3 Basic Concepts
 - 4.4 Mathematical Functions
5. Classification and Optimization
 - 5.1 Linear Classifier
 - 5.2 Cost Functions
 - 5.3 Parameter Configuration and Cross-Validation
 - 5.4 Stochastic Gradient Descent
 - 5.5 Mini-Batching
 - 5.6 Epochs
6. Multilayer Neural Networks
 - 6.1 Introduction and Motivation
 - 6.2 Structure and Mathematics
 - 6.3 Implementation with Tensorflow
 - 6.4 Adaptation of Existing Models
 - 6.5 Over-Adaptation and Possible Solutions
7. Convolutional Neural Networks
 - 7.1 Motivation and Fields of Application
 - 7.2 Structure
 - 7.3 CNNs for Text Analysis
 - 7.4 CNNs for Image Analysis

Module Contents

Object oriented and functional programming in Python

This course introduces the students to the advanced programming concepts of object orientation and functional programming and how they are realized in the Python programming language.

Data Science Software Engineering

- Traditional project management
- Agile project management
- Testing
- Software development paradigms
- From model to production

Learning Outcomes

Object oriented and functional programming in Python

On successful completion, students will be able to

- explain basic notions in object-oriented programming such as functions and classes.
- understand object-oriented programming concepts and their relation to software design and engineering.
- describe advanced function concepts in Python.
- recognize important ideas from functional programming.
- recall important libraries for functional programming in Python.

Data Science Software Engineering

On successful completion, students will be able to

- understand the concept of project management approaches.
- apply agile approaches in software development.
- create automated software tests.
- understand various software development paradigms.
- evaluate the necessary steps to bring models into a production environment.

Object oriented and functional programming in Python

Course Code: DLBDSOOFPP01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course builds upon basic knowledge of Python programming (Introduction to Programming with Python, DLBDSIPWP) and is concerned with the exposition of advanced Python programming concepts. To this end, important notions of object-oriented programming like classes and objects and pertaining design principles are outlined. Starting from an in-depth discussion of advanced features of Python functions, functional programming concepts and their implementation in Python are conveyed.

Course Outcomes

On successful completion, students will be able to

- explain basic notions in object-oriented programming such as functions and classes.
- understand object-oriented programming concepts and their relation to software design and engineering.
- describe advanced function concepts in Python.
- recognize important ideas from functional programming.
- recall important libraries for functional programming in Python.

Contents

- This course provides students with a thorough introduction to important notions and concepts from the domain of object-oriented programming such as classes, objects, abstraction, encapsulation, inheritance, polymorphism, composition, and delegation. Additionally, the functional programming paradigm and pertaining ideas like functions as first class objects, decorators, pure functions, immutability and higher order functions are conveyed. Pursuant to the portfolio course type, the aforementioned concepts and ideas are explored by hands-on programming projects.

Data Science Software Engineering

Course Code: DLBDSSE01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	DLBDSIPWP01 or DLBDSIPWP01_D; DLBDSOOFPP01 or IOBP01

Course Description

A core part of data science is creating value from data. This means not only the creation of sophisticated predictive models but also the development of these models according to modern software development principles. This course gives a detailed overview of the relevant methods and paradigms which data scientists need to know in order to develop enterprise-grade models. This course discusses traditional and agile project management techniques, highlighting both the Kanban and Scrum approaches. It explores relevant software development paradigms such as test-driven development, pair programming, mob programming, and extreme programming. Special focus is given to the topic of testing and the consideration of how to bring a model into a production environment.

Course Outcomes

On successful completion, students will be able to

- understand the concept of project management approaches.
- apply agile approaches in software development.
- create automated software tests.
- understand various software development paradigms.
- evaluate the necessary steps to bring models into a production environment.

Contents

1. Traditional Project Management
 - 1.1 Requirements engineering
 - 1.2 Waterfall model
 - 1.3 Rational unified process
2. Agile Project Management
 - 2.1 Criticism of the waterfall model
 - 2.2 Introduction to SCRUM
 - 2.3 Introduction to Kanban

3. Testing
 - 3.1 Why testing?
 - 3.2 Unit tests
 - 3.3 Integration tests
 - 3.4 Performance monitoring
4. Software Development Paradigms
 - 4.1 Test-driven development (TDD)
 - 4.2 Pair programming
 - 4.3 Mob programming
 - 4.4 Extreme programming
5. From Model to Production
 - 5.1 Continuous delivery
 - 5.2 Continuous integration
 - 5.3 Building a scalable environment

Module Contents**Introduction to Data Protection and Cyber Security**

- Fundamentals of IT Security
- Data Protection
- IT Security Management
- Network and Communication Security

Cryptography

- Protection targets, vulnerabilities, and threats
- Foundations of cryptology and its core components
- Basic cryptographic applications
- Authentication
- Single computer security
- Security communication network
- Security E-Commerce
- Secure software development

Learning Outcomes**Introduction to Data Protection and Cyber Security**

On successful completion, students will be able to

- explain the terms and concepts of IT security and know the typical procedures and techniques which exist in each area.
- cite the legal regulations on data protection and explain their implementation.
- discuss in-depth IT security management and suitable measures for implementation.
- use their overview knowledge of activities and strategies for IT security in software and system development.

Cryptography

On successful completion, students will be able to

- give an overview of different classes of cryptographic systems.
- give a basic description of symmetric cryptographic methods, in particular One-Time Pad, DES, and AES, and describe their operating principles by means of simple, concrete examples.
- describe the basic hash functions.
- describe basic asymmetric cryptographic methods, especially RSA, and their operating principles by means of simple, concrete examples.
- describe the areas of application of cryptographic procedures and their application scenarios.

Introduction to Data Protection and Cyber Security

Course Code: DLBCSIDPITS01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In this course, the students are familiarized with important concepts from the field of IT security. Basic terms are introduced and discussed, and typical application fields, areas of IT security application, and typical procedures and techniques are introduced and described.

Course Outcomes

On successful completion, students will be able to

- explain the terms and concepts of IT security and know the typical procedures and techniques which exist in each area.
- cite the legal regulations on data protection and explain their implementation.
- discuss in-depth IT security management and suitable measures for implementation.
- use their overview knowledge of activities and strategies for IT security in software and system development.

Contents

1. Fundamentals of Data Protection and Cyber Security
 - 1.1 Conceptual Bases, Protection Goals
 - 1.2 Attacks and Threats
 - 1.3 Security Strategy
 - 1.4 Legal Regulations
2. Data Protection
 - 2.1 Data Protection as a Personal Right
 - 2.2 Basic Principles of Data Protection
 - 2.3 EU General Data Protection Regulation
 - 2.4 Further International Regulations on Data Protection
 - 2.5 Cross-Border Data Flow
 - 2.6 Data Protection in Everyday Life

3. Basic Functions of Cyber Security and Their Implementation
 - 3.1 Identification and Authentication
 - 3.2 Rights Management
 - 3.3 Rights Check
 - 3.4 Preservation of Evidence
4. Cyber Security Management
 - 4.1 Basic Concepts and Standards in Cyber Security Management
 - 4.2 Series of Standards ISO 2700x
5. Cyber Security Management in Everyday Life
 - 5.1 Password Management
 - 5.2 Data Backup
 - 5.3 Email Security
 - 5.4 Protection Against Viruses and Other Malware
 - 5.5 Protection Against Social Engineering Attacks
6. Network and Communication Security
 - 6.1 Firewall Technology
 - 6.2 Network Separation
 - 6.3 Security in WLAN, Mobile Networks, Bluetooth, and NFC
7. Cyber Security in the Development of Software and Systems
 - 7.1 Protection of the Development Environment
 - 7.2 Secure Development
 - 7.3 Common Criteria

Cryptography

Course Code: DLBCSCT01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course covers basic and targeted in-depth knowledge of cryptographic processes and the practical use of cryptographic systems. After an overview of cryptographic methods, hash functions, symmetric methods, and asymmetric methods are presented. The theoretical basics of selected procedures are taught and practically explained using simple examples. In addition, areas of application and application scenarios for cryptographic procedures are presented.

Course Outcomes

On successful completion, students will be able to

- give an overview of different classes of cryptographic systems.
- give a basic description of symmetric cryptographic methods, in particular One-Time Pad, DES, and AES, and describe their operating principles by means of simple, concrete examples.
- describe the basic hash functions.
- describe basic asymmetric cryptographic methods, especially RSA, and their operating principles by means of simple, concrete examples.
- describe the areas of application of cryptographic procedures and their application scenarios.

Contents

1. Protection Goals, Vulnerabilities, and Threats
 - 1.1 Protection Goals
 - 1.2 Vulnerabilities and Threats
2. Foundations of Cryptology and its Core Components
 - 2.1 Encoding
 - 2.2 Symmetrical Encryption
 - 2.3 Asymmetric Encryption
 - 2.4 One-way Functions and Cryptographic Hash Functions

3. Basic Cryptographic Applications
 - 3.1 Key exchange and Hybrid Processes
 - 3.2 Digital Signature
 - 3.3 Message Authentication Code
 - 3.4 Steganographic Methods
4. Authentication
 - 4.1 Passwords and Public-Key-Certificates
 - 4.2 Challenge-Response-Procedure and Zero-Knowledge-Procedure
 - 4.3 Biometric Methods
 - 4.4 Authentication in Distributed Systems
 - 4.5 Identities Through Smartcards
5. Security of Single Computers
 - 5.1 Malware and Cookies
 - 5.2 Some Special Features of Operating Systems
 - 5.3 Web Server Security
6. Security in Communication Networks
 - 6.1 Security Problems and Defense Concepts
 - 6.2 Internet Standards for Communication Security
 - 6.3 Identity and Anonymity
 - 6.4 Security in Mobile and Wireless Communications
7. Security in E-Commerce
 - 7.1 Email Security
 - 7.2 Online Banking and Online Payments
 - 7.3 Electronic Money
8. Secure Software Development
 - 8.1 Threat Modeling
 - 8.2 Secure Software Design
 - 8.3 Techniques for Safe Programming

Mobile Software Engineering

Course Code: IWMB01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Using the mobile platform Android as an example, the course explains how the programming of mobile applications (Apps) differs from the development of browser-based information systems, gives an overview of technologies and programming concepts deployed and describes common challenges in the development of apps for industrial applications.

Course Outcomes

On successful completion, students will be able to

- recognize and describe the variances and specific features of software development for mobile systems.
- distinguish between different activities, parts and risks in the creation, operation and maintenance of mobile software systems .
- explain and differentiate the architecture and technical features of the Android Platform.
- autonomously create mobile software systems to solve concrete problems for the Android Platform .

Contents

1. Basics of Mobile Software Development
 - 1.1 Special Features of Mobile Devices
 - 1.2 Special Features of Mobile Software Development
 - 1.3 Classification of Mobile Devices
 - 1.4 The Android Platform
2. Android System Architecture
 - 2.1 The Android System
 - 2.2 Security Features
 - 2.3 Communication with Networks
3. Programming Environment
 - 3.1 Android Studio
 - 3.2 First App and Emulator Test
 - 3.3 Application Deployment

4. Core Components of Android Apps
 - 4.1 Overview of Android App Components
 - 4.2 Activities, Layouts and Views
 - 4.3 Resources
 - 4.4 Summary in an App
 - 4.5 Graphic Design
5. Interaction between Application Components
 - 5.1 Intents
 - 5.2 Services
 - 5.3 Broadcast Receive
6. Advanced Methods
 - 6.1 Threading
 - 6.2 Application memory

Project: Mobile Software Engineering

Course Code: IWMB02_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

With the material conveyed in the course "Mobile Software Engineering Using the Android Platform as an Example", students autonomously create a mobile application and document its design and implementation.

Course Outcomes

On successful completion, students will be able to

- autonomously design and prototype small mobile applications to solve a specific task.
- identify typical problems and challenges in the practical implementation of small mobile applications.
- document the creation and implementation of small, autonomously designed and implemented mobile applications .

Contents

- Design, implementation and documentation of small, mobile applications based on a specific example. Possible topics are, for example:
 - A radio app to improve the exchange between listeners and station in general, and particularly between listeners and radio presenters.
 - An app that allows a group of board game fans to better organize their regular evening game schedule.
 - An app that enables the supervisors of assignments at IUBH to improve their support procedures.

Studium Generale I

Course Code: DLBSG01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	None

Course Description

In the course "Studium Generale I", students deepen their knowledge in a self-selected subject area by completing an IU course outside their applicable curriculum. This gives them the opportunity to look beyond their own subject area and acquire further competencies. The associated option enables students to self-determine their study content to focus even more on issues relevant to them and/or to strengthen or develop selected competencies.

Course Outcomes

On successful completion, students will be able to

- apply acquired key competencies to issues in their field of study and/or in their professional environment.
- to deepen one's own skills and abilities in a self-directed manner.
- to look beyond the boundaries of their own area of expertise.

Contents

- The course "Studium Generale I" offers students the opportunity to take courses outside of their curriculum and the result can be credited as an elective subject. In principle, all IU bachelor courses that fulfill the following requirements can be chosen for this purpose:
 - They are not part of an integral part of the applicable mandatory curriculum.
 - They do not have admission requirements or students can prove that they have met the admission requirement.
- The examination of the selected courses must be taken in full and finally passed in order to be credited as part of the 'Studium Generale'.

Certificate Course Italian

To learn and deepen Italian as a foreign language at the chosen CEFR level with regard to the respective qualitative aspects of range, correctness, fluency, interaction and coherence. The module includes a combination of listening, comprehension, writing and speaking exercises as well as various course material.

Foreign Language Italian

To learn and deepen Italian as a foreign language at the chosen CEFR level with regard to the respective qualitative aspects of range, correctness, fluency, interaction and coherence. The module includes a combination of listening, comprehension, writing and speaking exercises as well as various course material.

Learning Outcomes

Certificate Course Italian

On successful completion, students will be able to

- meet the qualification objectives according to the chosen level (A1, A2, B1 or B2) according to the criteria of the Common European Framework of Reference for Languages (CEFR).
- use the foreign language Italian according to a CEFR placement test on the basis of everyday topics, selected areas of specialization and by adapting basic and advanced grammatical structures.

Foreign Language Italian

On successful completion, students will be able to

- meet the qualification objectives according to the chosen level (A1, A2, B1 or B2) according to the criteria of the Common European Framework of Reference for Languages (CEFR).
- use the foreign language Italian according to a CEFR placement test on the basis of everyday topics, selected areas of specialization and by adapting basic and advanced grammatical structures.

Certificate Course Italian

Course Code: DLFSWI01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The qualification objectives correspond to levels A1, A2, B1 and B2 according to the criteria of the Common European Framework of Reference for Languages (CEFR). Using everyday subject areas, chosen areas of specialization, and using basic and advanced grammatical structures, the use of Italian as a foreign language is taught and practiced according to a CEFR placement test. Upon successful completion, students will receive a certificate corresponding to their chosen level.

Course Outcomes

On successful completion, students will be able to

- meet the qualification objectives according to the chosen level (A1, A2, B1 or B2) according to the criteria of the Common European Framework of Reference for Languages (CEFR).
- use the foreign language Italian according to a CEFR placement test on the basis of everyday topics, selected areas of specialization and by adapting basic and advanced grammatical structures.

Contents

- Depending on the CEFR placement, students will be proficient
 - to understand and use familiar, everyday expressions and very simple phrases aimed at satisfying concrete needs. They can introduce themselves and others and ask other people questions about themselves - e.g. where they live, what kind of people they know or what kind of things they have - and they can give answers to questions of this kind. They can communicate in a simple way if the person they are talking to speaks slowly and clearly and is willing to help. (Level A1)
 - to understand sentences and frequently used expressions related to areas of immediate importance (e.g. personal and family information, shopping, work, local area). You can communicate in simple, routine situations involving a simple and direct exchange of information about familiar things. You can describe by simple means your own background and education, immediate environment and things related to immediate needs. (Level A2)
 - to understand the main points when clear standard language is used and when it's about familiar things from work, school, leisure, etc. You can handle most situations encountered while traveling in the language area. You can express yourself simply and coherently on familiar topics and personal areas of interest. You can talk about experiences and events, describe dreams, hopes and goals, and give brief reasons or explanations for plans and opinions. (Level B1)

- to understand the main content of complex texts on concrete and abstract topics; and to understand specialist discussions in their own area of specialization. You can communicate so spontaneously and fluently that a normal conversation with native speakers is quite possible without major effort on either side. You can express yourself clearly and in detail on a wide range of topics, explain a point of view on a topical issue and state the advantages and disadvantages of various options. (Level B2)
- Grammar:
 - Level A1 - present and past tenses, sentence structure, prepositions, etc.
 - Level A2 - among other things tenses of the past, differences in the past tenses, imperative, subordinate clauses, pronouns (dative, accusative)
 - Level B1 - including introduction of past perfect, conjunctions, introduction of passive voice, adverbs, adjectives (difference), future tense
 - Level B2 - among others verb constructions, conditional clauses, indirect speech

Certificate Course Spanish

Course Code: DLFSWS01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The qualification objectives correspond to levels A1, A2, B1 and B2 according to the criteria of the Common European Framework of Reference for Languages (CEFR). Using everyday subject areas, chosen areas of specialization, and using basic and advanced grammatical structures, the use of Spanish as a foreign language is taught and practiced according to a CEFR placement test. Upon successful completion, students will receive a certificate corresponding to their chosen level.

Course Outcomes

On successful completion, students will be able to

- meet the qualification objectives according to the chosen level (A1, A2, B1 or B2) according to the criteria of the Common European Framework of Reference for Languages (CEFR).
- use the foreign language Spanish according to a CEFR placement test on the basis of everyday topics, selected areas of specialization and by adapting basic and advanced grammatical structures.

Contents

- Depending on the CEFR placement, students will be proficient
 - to understand and use familiar, everyday expressions and very simple phrases aimed at satisfying concrete needs. They can introduce themselves and others and ask other people questions about themselves - e.g. where they live, what kind of people they know or what kind of things they have - and they can give answers to questions of this kind. They can communicate in a simple way if the person they are talking to speaks slowly and clearly and is willing to help. (Level A1)
 - to understand sentences and frequently used expressions related to areas of immediate importance (e.g. personal and family information, shopping, work, local area). You can communicate in simple, routine situations involving a simple and direct exchange of information about familiar things. You can describe by simple means your own background and education, immediate environment and things related to immediate needs. (Level A2)
 - to understand the main points when clear standard language is used and when it's about familiar things from work, school, leisure, etc. You can handle most situations encountered while traveling in the language area. You can express yourself simply and coherently on familiar topics and personal areas of interest. You can talk about experiences and events, describe dreams, hopes and goals, and give brief reasons or explanations for plans and opinions. (Level B1)

- to understand the main content of complex texts on concrete and abstract topics; and to understand specialist discussions in their own area of specialization. You can communicate so spontaneously and fluently that a normal conversation with native speakers is quite possible without major effort on either side. You can express yourself clearly and in detail on a wide range of topics, explain a point of view on a topical issue and state the advantages and disadvantages of various options. (Level B2)
- Grammar:
 - Level A1 - present and past tenses, sentence structure, prepositions, etc.
 - Level A2 - among other things tenses of the past, differences in the past tenses, imperative, subordinate clauses, pronouns (dative, accusative)
 - Level B1 - including introduction of past perfect, conjunctions, introduction of passive voice, adverbs, adjectives (difference), future tense
 - Level B2 - among others verb constructions, conditional clauses, indirect speech

Bachelor Thesis

Course Code: DLBBT01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		9	none

Course Description

The aim and purpose of the bachelor's thesis is to successfully apply the subject-specific and methodological competencies acquired during the course of study in the form of an academic dissertation with a thematic reference to the major field of study. The content of the bachelor's thesis can be a practical-empirical or theoretical-scientific problem. Students should prove that they can independently analyze a selected problem with scientific methods, critically evaluate it, and work out proposed solutions under the subject-methodological guidance of an academic supervisor. The topic chosen by the student from their respective field of study should meet the acquired scientific competences, deepening their academic knowledge and skills in order to meet the future needs of the field.

Course Outcomes

On successful completion, students will be able to

- work on a problem from their major field of study by applying the specialist and methodological skills they have acquired during their studies.
- independently analyze selected tasks with scientific methods, critically evaluate them, and develop appropriate solutions under the guidance of an academic supervisor.
- record and analyze existing (research) literature appropriate to the topic of their bachelor's thesis.
- prepare a detailed written elaboration in compliance with scientific methods.

Contents

- The bachelor's thesis must be written on a topic that relates to the content of the respective major field of study. In the context of the bachelor's thesis, the problem, as well as the scientific research goal, must be clearly emphasized. The work must reflect the current state of knowledge of the topic to be examined by means of an appropriate literature analysis. The student must prove their ability to use the acquired knowledge theoretically and/or empirically in the form of an independent and problem-solution-oriented application.

Colloquium

Course Code: DLBBT02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
BA	English		1	none

Course Description

The colloquium will take place after the submission of the bachelor's thesis. This is done at the invitation of the experts. During the colloquium, students must prove that they have independently produced the content and results of the written work. The content of the colloquium is a presentation of the most important work contents and research results by the student as well as the answering of questions by experts.

Course Outcomes

On successful completion, students will be able to

- present a problem from their field of study using academic presentation and communication techniques.
- reflect on the scientific and methodological approach chosen in their bachelor's thesis.
- demonstrate that they can actively answer subject-related questions from the subject experts (reviewers of the bachelor's thesis).

Contents

- The colloquium includes a presentation of the most important results of the bachelor's thesis, followed by the student answering the reviewers' technical questions.

Literature

Compulsory Reading

Further Reading

- Subject specific literature chosen by the student
