Module Contents

- Applied Project Management
- The Project Management Landscape
- The Project Context
- Standardized Approaches to Project Management
- Agile Approaches to Project/Process Management
- Variations of Standardized and Agile Methods
- Tools for Project Managers

Learning Outcomes**Applied Project Management**

On successful completion, students will be able to

- understand and explain the role of project management within organizations.
- give an overview over the project management institutions worldwide.
- explain the different approaches of the most important standardized and agile project management methods.
- critically discuss the advantages and restrictions of each of these methods.
- know and apply the variety of helpful tools supporting a project manager's work.
- select the appropriate project management method for any given situation.

MA	English		5	none

Course Description

For many decades now, the approach of project management has played an important role worldwide, both in the private sector as well as in public administration. Over the years, a widespread and commonly used terminology has evolved. National and international project management organizations have developed various methods for managing complex projects in an organized way. These can be divided into two major categories. The traditional standardized methods all have in common that they tackle projects in a planned and well-structured way. The agile methods, on the other hand, feature a systematic but open approach, leaving vast room for changes along the way. In this course, the individual methods are being introduced to some level of detail, explaining the basic idea, and showing the advantages and restrictions of each of these methods. The typical field of application for each method will be described, enabling the student to choose the method fitting best for a given situation. Additionally, a set of practical tools will be taught, which will support a project manager in steering any given project towards the project goal.

Course Outcomes

On successful completion, students will be able to

- understand and explain the role of project management within organizations.
- give an overview over the project management institutions worldwide.
- explain the different approaches of the most important standardized and agile project management methods.
- critically discuss the advantages and restrictions of each of these methods.
- know and apply the variety of helpful tools supporting a project manager's work.
- select the appropriate project management method for any given situation.

Contents

1. The Project Management Landscape
 - 1.1 History of project management
 - 1.2 Definition of projects, programs, and processes
 - 1.3 Scope and examples of projects in today's world
 - 1.4 International project management organizations
 - 1.5 Options for specialization and certification

2. The Project Context
 - 2.1 Analyzing the environment and the project goals
 - 2.2 Distinguishing project types and categories
 - 2.3 Project culture and organization models
 - 2.4 The role of leadership and personnel management
 - 2.5 Finding the right approach – selection criteria
3. Standardized Approaches to Project Management
 - 3.1 Project management according to German DIN
 - 3.2 Project management according to PMBOK 6 by the PMI
 - 3.3 The IPMA system
 - 3.4 Organizing projects with PRINCE2®
 - 3.5 Advantages and restrictions of standardized methods
4. Agile Approaches to Project/Process Management
 - 4.1 The Agile Manifesto
 - 4.2 Fundamentals of Scrum and scaling methods
 - 4.3 Kanban and Design Thinking
 - 4.4 Advantages and restrictions of agile methods
5. Variations of Standardized and Agile Methods
 - 5.1 The critical chain project management
 - 5.2 Prince2® Agile
 - 5.3 The PMBOK 7 by the PMI
 - 5.4 Overview over further variations
6. Tools for Project Managers
 - 6.1 Objectives, milestone planning, and work packages
 - 6.2 Budgeting, resource planning, and scheduling using bar charts
 - 6.3 Analyzing project risks (FMEA) and milestone trends (MTA)
 - 6.4 Taskboards and other little tricks
 - 6.5 Stakeholder management and management reporting

Module Contents

- Foundations and concepts of strategic management
- Strategic planning process
- International challenges of strategic management

Learning Outcomes**Strategic Management**

On successful completion, students will be able to

- understand the entire process of strategic planning from the organizational planning, the implementation to the evaluation and controlling.
- apply appropriate analysis tools in order to methodically address specific business decisions in the international business environment, taking intercultural aspects into account.
- analyze the capabilities of various organizations, that operate in different fields, from a functional and resource perspective by evaluating its strengths and weaknesses.
- develop a better understanding of the wider business environment by analyzing the opportunities and threats facing their organization.
- evaluate strategies by employing appropriate controlling tools.

Strategic Management

Course Code: DLMBSME01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MBA	English		5	None

Course Description

Various methods of strategic market analysis are presented in this course so as to allow students to evaluate risks and opportunities in global markets, highlighting intercultural aspects, by looking at organizations operating in different countries. Students learn to analyze and understand strengths and weaknesses of organizations from various disciplines (products, services, NGOs etc.) that face specific market situations. Supported by new developments in the field of market research, the process for identifying and analyzing core competencies and competitive advantages in national and international environments is discussed at length. Students are supported to plan strategic alternatives and to implement and control these by taking on fictitious roles within various different organizations. Exercises and international case studies help students to identify with the role of management and participate in the strategic planning process as well as in operational management. This helps students understand the problems companies regularly face and comprehend how methods of modern management can be used in order to solve these.

Course Outcomes

On successful completion, students will be able to

- understand the entire process of strategic planning from the organizational planning, the implementation to the evaluation and controlling.
- apply appropriate analysis tools in order to methodically address specific business decisions in the international business environment, taking intercultural aspects into account.
- analyze the capabilities of various organizations, that operate in different fields, from a functional and resource perspective by evaluating its strengths and weaknesses.
- develop a better understanding of the wider business environment by analyzing the opportunities and threats facing their organization.
- evaluate strategies by employing appropriate controlling tools.

Contents

1. What is Strategy?
 - 1.1 What is a Corporate Strategy?
 - 1.2 What Has to be Taken into Consideration when Making Strategic Decisions?
 - 1.3 Who Takes Part in Developing a Strategy?
 - 1.4 What is Included in a Solid Strategic Plan?

2. The Strategic Environment
 - 2.1 Where Are We in the Market Place? The Macro Environment
 - 2.2 Where Are We in the Market Place? The Micro Environment
 - 2.3 Analysis, Strategic Capabilities, and the Five Forces Model
3. The Position in the Market
 - 3.1 Why Do We Exist?
 - 3.2 What is Our Position in the Market?
 - 3.3 What Information Does the Company Need?
 - 3.4 What Capabilities Does the Company Have?
 - 3.5 What Capabilities Do Others Have?
4. What Strategic Options Are Available to the Strategic Business Unit (SBU)?
 - 4.1 What Strategic Options Does the SBU Have?
 - 4.2 Interactive Strategies
 - 4.3 Product Life Cycle
5. What Strategic Options Are Available to the Corporation?
 - 5.1 Areas to Consider When Formulating a Strategy
 - 5.2 Strategic Options
 - 5.3 Outsourcing
 - 5.4 Product Portfolio Analysis Using the BCG Matrix
 - 5.5 Product Portfolio Analysis Using the GE-McKinsey Matrix
6. What International Strategies Are Available?
 - 6.1 Why Do Companies Go International?
 - 6.2 What Factors Contribute to the Decision About Which Country to Invest In?
 - 6.3 How Can a Company Invest Internationally?
7. Do-It-Yourself, Buy, or Ally?
 - 7.1 Do-It-Yourself
 - 7.2 Mergers and Acquisitions (M&As)
 - 7.3 Strategic Alliances
 - 7.4 How to Decide Whether to Buy, Ally, or Do-It-Yourself?
8. How to Evaluate Strategies?
 - 8.1 How to Evaluate Strategy?
 - 8.2 Implementing Strategy

Requirements Management

Course Code: DLMPRERM01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Globalization and digitization are the mega-trends of our time. In addition to increasingly global networking, real-time communication and growing product complexity, customer requirements and needs are changing rapidly as well. The flexible, fast and target specific reaction, recording, controlling, monitoring and administration of these changing customer needs must be met by requirements management. This course will explain the internal and external drivers of requirements management as well as address the other mega-trends. The aim is to identify and understand the specific tasks, methods and quality criteria of requirements management. Furthermore, the need for industry-specific adaptation within the basic requirements management process flow is of major importance. Finally, this course will offer critical reflection, taking into consideration the limiting framework conditions when applying requirements management.

Course Outcomes

On successful completion, students will be able to

- understand the drivers and the importance of requirements management.
- name the essential tasks and functions of requirements management as well as describe their meaning.
- explain the different methods of requirements management.
- define quality criteria for good requirements management and identify requirements smells.
- explain the process of requirements management and derive industry-specific needs.

Contents

1. Basics and Drivers of Requirements Management
 - 1.1 Introduction
 - 1.2 Definition of Requirements and Management
 - 1.3 Requirements Management as an Answer to the VUCA World
 - 1.4 External and Internal Drivers for Requirements Management
 - 1.5 Project Management and Requirements Management

2. Classification and Terms of Requirements Management
 - 2.1 Requirements Management in Relation to Requirements Engineering
 - 2.2 Requirements Management in Relation to Business Analysis
 - 2.3 From Customer Needs to the Specification of Requirements
 - 2.4 The Specification Sheet and its Significance
 - 2.5 The Importance of Functional Specifications and Technical Concept
3. Requirements Management Tasks
 - 3.1 Management and Control of Requirements
 - 3.2 Administration of Requirements
 - 3.3 Risk Management
 - 3.4 Implementation Management
 - 3.5 Modification Management
4. Methods and Quality of Requirements Management
 - 4.1 Scoping
 - 4.2 Requirements Analysis and Requirements Specification
 - 4.3 Requirements Modeling and Review
 - 4.4 Quality Criteria of Requirements Management
 - 4.5 Identification of Requirements Smells
5. Process and Industry-specific Needs of Requirements Management
 - 5.1 Basic Process of Requirements Management
 - 5.2 Specifications for Projects in Mechanical and Plant Engineering
 - 5.3 Specifications for Projects in Civil Engineering
 - 5.4 Specifications for Projects in the Social Sector
 - 5.5 Specifications for Projects in the Software Sector
6. Critical Reflection
 - 6.1 Costs / Benefits of Requirements Management
 - 6.2 Requirements Management and Agility - a Contradiction?
 - 6.3 Limits of Requirements Management

Module Contents

- Foundations of professional leadership
- Leadership and motivation in the corporation
- Leadership and corporate culture
- Leadership and change management

Learning Outcomes

Leadership

On successful completion, students will be able to

- recognize underlying beliefs and attitudes towards leadership and compare the influence of various theories of leadership on the identification and development of leaders.
- recognize the impact of cultural environments on leadership, and understand the challenges and opportunities of cross-cultural management.
- outline the influence of social roles on leaders and employees, and assess the influence of roles types on the interactions between leaders and those they are leading.
- ,as a leader, support employees by drawing on empirical evidence to effectively meet the expectations of employees.
- recognize the roles and conflicting interests inherent to leadership positions and develop strategies to address locomotion and cohesion.
- discriminate between effective and non-effective methods for managing staff and organizational activities, and apply those techniques and tools in practice to maximize the satisfaction and effectiveness of staff.
- perform the various responsibilities delegated to a leader such as communicate with employees, lead planning activities, delegate tasks, and plan and lead controlling activities.
- create a plan to support employees through the process of change within an organization.
- assess personal leadership style using a variety of measures and evaluate leadership activities relative to transactional and transformational leadership styles.

Leadership

Course Code: DLMBLSE01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MBA	English		5	None

Course Description

In today's knowledge-based society, employees are a firm's most valuable resource. A key responsibility of leadership is to develop the knowledge, expertise, and skills of employees. Good leadership is crucial for the continued success of a firm in the face of increasingly competitive markets. This course presents the necessary competencies of the leader in a modern, knowledge-based organization. Central questions raised by modern leadership theory are presented and discussed. In doing so, the course focuses on requirements and instruments of professional leadership, aspects of situational leadership, and leadership communication and interactions, both in the context of strategic management and change processes. The methodological and conceptual foundations of leadership are presented to students, along with empirical examples and best-practice principles, with the intent for students to master the challenges of enhancing the firm's most valuable asset—its employees—via professional and contemporary leadership practices.

Course Outcomes

On successful completion, students will be able to

- recognize underlying beliefs and attitudes towards leadership and compare the influence of various theories of leadership on the identification and development of leaders.
- recognize the impact of cultural environments on leadership, and understand the challenges and opportunities of cross-cultural management.
- outline the influence of social roles on leaders and employees, and assess the influence of roles types on the interactions between leaders and those they are leading.
- ,as a leader, support employees by drawing on empirical evidence to effectively meet the expectations of employees.
- recognize the roles and conflicting interests inherent to leadership positions and develop strategies to address locomotion and cohesion.
- discriminate between effective and non-effective methods for managing staff and organizational activities, and apply those techniques and tools in practice to maximize the satisfaction and effectiveness of staff.
- perform the various responsibilities delegated to a leader such as communicate with employees, lead planning activities, delegate tasks, and plan and lead controlling activities.
- create a plan to support employees through the process of change within an organization.
- assess personal leadership style using a variety of measures and evaluate leadership activities relative to transactional and transformational leadership styles.

Contents

1. An Overview of Leadership
 - 1.1 Leadership and Personality: Trait Theories
 - 1.2 Leadership as a Skill: Attribute and Behavior Theories
 - 1.3 Positive Reinforcement: Behavioral Theories
 - 1.4 Leadership Dependent on the Situation: Situational Approaches
 - 1.5 Situational and Contingency Theories
 - 1.6 Theory of Functional Leadership Behavior
 - 1.7 Integrated Psychological Theory
 - 1.8 Transactional and Transformative Leadership
 - 1.9 Leadership as an Emotionally Charged Process
 - 1.10 Neo-Emergent Theory
2. Leadership as a Social Role
 - 2.1 Roles and Groups
 - 2.2 Role Types
 - 2.3 Formal Conditions for Social Roles – Corporate Context Determining Roles in Organizations
 - 2.4 The Individual and The Group – Conforming and Deviating Behavior
 - 2.5 The Problems of Formalized Role Understanding and Self-Concept
3. Leadership from the Employee’s Perspective
 - 3.1 General Expectations for Managers
 - 3.2 Truthfulness and Authenticity
 - 3.3 Handling Conflicts Competently
 - 3.4 Conflicts in Groups
 - 3.5 Conflict Resolution Pattern According to Matzat
 - 3.6 Enthusiasm
 - 3.7 Ability to Cope with Pressure
 - 3.8 Assertiveness
 - 3.9 Empathy
 - 3.10 Expertise

4. Leadership from the Manager's Perspective
 - 4.1 Self-Concept as a Manager
 - 4.2 Locomotion and Cohesion
 - 4.3 Individual Problems and Learning Dimensions of Management Behavior
 - 4.4 The Concept of Human Nature and Its Influence on Management Behavior: Theories from Maslow, McGregor, and Herzberg
 - 4.5 Ambiguity Tolerance
5. Management Tools
 - 5.1 Management Tools - Definition
 - 5.2 Organizational Management Tools
 - 5.3 Personnel Management Tools
6. Managerial Functions
 - 6.1 Responsibilities of a Manager
 - 6.2 Communication
 - 6.3 Foundations of Interpersonal Communication
 - 6.4 Planning
 - 6.5 Setting Objectives
 - 6.6 Delegating
 - 6.7 Controlling
 - 6.8 Creating a Feedback Culture
7. Organizational Change
 - 7.1 Knowledge
 - 7.2 Cultural Value Change and Subjectification
 - 7.3 Globalization
 - 7.4 Technological Progress
 - 7.5 Change Management – Leadership in Times of Change
8. Successful Employee Management
 - 8.1 Measuring Leadership Style and Leadership Behavior
 - 8.2 Measuring Transactional and Transformational Leadership with the Multifactor Leadership Questionnaire (MLQ)
 - 8.3 Correlation of Leadership Behavior with Subjective and Objective Success Criteria
 - 8.4 Validation of Leadership Success Using Situational Factors
 - 8.5 Leadership Principles Guiding Leadership Behavior

Module Contents

- Social science and research paradigms
- Case study research
- Specific topics of qualitative research
- Advanced issues of qualitative research conceptualization and data analysis
- Underlying assumptions of quantitative research: concepts and consequences
- Evaluation research

Learning Outcomes**Advanced Research Methods**

On successful completion, students will be able to

- understand and apply scientific methodologies in conducting empirical research.
- plan, design, and prepare research proposals.
- differentiate between different types of case studies, select and apply different data collection strategies.
- plan, conduct, and analyze case studies and surveys.
- scientifically analyze quantitative and qualitative data.
- conduct evaluation research to determine quality of research.

Advanced Research Methods

Course Code: DLMARM01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Advanced research methods, specifically business research, is scientific inquiry that attempts to uncover new information which helps a business improve performance, maximizing shareholder value while adhering to ethical and moral compliance standards. Managers seeking to conduct empirical research must maintain validity, reliability, and trustworthiness when utilizing scientific methodologies in order to produce meaningful and actionable results. Research proposals are typically written prior to conducting research, which have a certain structure, enabling the researcher to properly plan, conduct, and analyze case studies and surveys. Different data collection strategies are used to collect both qualitative and quantitative data, depending on the research proposal goals. Managers utilize their understanding of research methodologies to accurately assess the quality of research.

Course Outcomes

On successful completion, students will be able to

- understand and apply scientific methodologies in conducting empirical research.
- plan, design, and prepare research proposals.
- differentiate between different types of case studies, select and apply different data collection strategies.
- plan, conduct, and analyze case studies and surveys.
- scientifically analyze quantitative and qualitative data.
- conduct evaluation research to determine quality of research.

Contents

1. Theoretical Background: Social Science and Research Paradigms
 - 1.1 What is a Paradigm?
 - 1.2 Empiricism
 - 1.3 Critical Rationalism
 - 1.4 Epistemological Anarchism
 - 1.5 Structural Functionalism
 - 1.6 Symbolic Interactionism
 - 1.7 Ethnomethodology

2. Case Study Research
 - 2.1 Types of Case Study Research
 - 2.2 Maintaining Quality in Case Study Research
 - 2.3 Case Study Design
 - 2.4 Implementing Case Studies
 - 2.5 Analyzing Case Studies
3. Specific Topics of Qualitative Research
 - 3.1 Idea Generation
 - 3.2 Critical Incident Technique
 - 3.3 Understanding Communication: Discourse Analysis
 - 3.4 Perceiving Perception: Interpretive Phenomenological Analysis
4. Advanced Issues of Qualitative Research Conceptualizing and Data Analysis
 - 4.1 Measurement Theory
 - 4.2 Index and Scale Construction
 - 4.3 Types of Scale Construction
 - 4.4 The Problem of Nonresponse and Missing Data
 - 4.5 Implications of IT for Research Strategies
5. Underlying Assumptions of Quantitative Research: Concepts and Consequences
 - 5.1 Classical Test Theory
 - 5.2 Probabilistic Test Theory
 - 5.3 Advanced Topics of Test Theory
6. Evaluation Research
 - 6.1 What is Evaluation Research?
 - 6.2 Types of Evaluation Research
 - 6.3 Meta-Analysis
 - 6.4 Meta-Evaluation

Module Contents

The focus of the course is on the necessity of introducing agility and creative working methods to companies. The topics include the fundamentals of agility, the process models of creativity as well as the different types of intellectual tools. These key aspects depend on the individually required skills to find solutions to satisfy customer requirements. Students will thus be able to guide innovation teams and accompany them in their process of finding new ways and solutions with appropriate process and methodological knowledge. On the basis of practical contributions from companies that have already introduced and do successfully live agility, the parameters, which are relevant and critical for success, are illuminated. This gives students a wide-ranging insight into the opportunities and possibilities of an agile thinking and acting organization.

Learning Outcomes

Project: Agile and Creative Methods

On successful completion, students will be able to

- name the relevant topics around agility and creative working methods.
- discuss the applicability of agility and creative working methods in the business-psychological context.
- apply the concepts covered.
- explain the importance, necessity and influence of agility and creative working methods against the background of current developments and to present these using examples.
- apply theoretically acquired knowledge to real case studies.
- implement the theories, methods and tools learned in business practice.
- scientifically investigate and process a selected topic from the field of agility and creative working methods.
- critically reflect, question, and discuss current problems of organizational change and ways of working in relation to agility and creative working methods.
- develop individual problem-solving processes and approaches in connection with agility and creative working methods, to elaborate possible solutions to the challenges of the associated organizational transformation as well as to apply the new methods and tools.

Project: Agile and Creative Methods

Course Code: DLMWPAKAM01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

The course deals with the necessity of transforming established organizational structures and working methods as well as with the sustainable embedding of agility, agile principles, and methods in companies. It addresses, amongst others, the following questions: How do companies shape transformations? How do they increase their level of agility in the organization? How can encrusted structures, rigid processes and departmental thinking be overcome? How does a company receive agility? How does one move an entire organization to rethink? The course addresses the importance of strategy, structure, process, leadership, methods, tools and culture in the context of the agile organization. It covers different creative work methods that are applied depending on the phase of the creative process. It enables to specifically support different thinking skills to create solutions for open-ended challenges to align with customer needs. Students discuss different process models and methods and apply them independently. They link their business-psychological, entrepreneurial knowledge with agile principles and tools. They critically reflect on their knowledge and experiences and question them.

Course Outcomes

On successful completion, students will be able to

- name the relevant topics around agility and creative working methods.
- discuss the applicability of agility and creative working methods in the business-psychological context.
- apply the concepts covered.
- explain the importance, necessity and influence of agility and creative working methods against the background of current developments and to present these using examples.
- apply theoretically acquired knowledge to real case studies.
- implement the theories, methods and tools learned in business practice.
- scientifically investigate and process a selected topic from the field of agility and creative working methods.
- critically reflect, question, and discuss current problems of organizational change and ways of working in relation to agility and creative working methods.
- develop individual problem-solving processes and approaches in connection with agility and creative working methods, to elaborate possible solutions to the challenges of the associated organizational transformation as well as to apply the new methods and tools.

Contents

- Amid of a turbulent, volatile economic and social environment, process- and project-organized organizational structures cannot keep pace with change and the associated requirements due to their rigid hierarchies and departmental thinking and acting. The continuing advance of digitalization and the entry of artificial intelligence into more and more areas require new forms of corporate organization and management. In order to survive on the market in the long term, companies have to keep coming up with new services and products. Traditional organizations focus very strongly on themselves. They think and act in pyramids and silos. Agility becomes necessary to survive in a world characterized by volatility, uncertainty, complexity and ambiguity (VUCA). Agile companies align their strategy with the customer and strive to maximize customer value. Hierarchical structures with a great deal of power at the top of the pyramid are being replaced by other organizational forms with distributed authority. The future will be defined by self-organized agile companies. For companies, agility and the associated creative working methods mean the ability to operate profitably in a competitive environment. This makes it possible to react more quickly to environmental changes and changing customer requirements. But how do agile, self-organized companies function and how do they innovate? This is what this course deals with.

IT Project Management

Course Code: DLMBITPAM01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

The purpose of this course is to introduce students to the concepts involved in IT project management. This is achieved through the development of an understanding of the fundamental tenets of project management enhancing the students' ability to apply their knowledge, skills and competencies in analyzing and solving IT project management problems. A special focus is put on the specifics of IT project organization, cost management and the human factor within IT projects.

Course Outcomes

On successful completion, students will be able to

- critically reflect the status of knowledge on IT project management.
- set up different IT project management formats (small, medium and large projects) and know the methods for managing these different IT projects professionally.
- develop an IT management proposal as the fundament of a professional IT project management concept.
- understand and integrate different IT management project plans (e.g., time plan, cost plan, resources plan, risk plan) and use those plans in an integrative IT project planning and controlling scheme.
- organize and to lead an IT project team and its core and/or extended team members.

Contents

1. Introduction: Characteristics of IT Projects
 - 1.1 Defining IT Projects
 - 1.2 Overview on Typical Roles and Phases of IT Projects
 - 1.3 Risks and Challenges of IT Projects
 - 1.4 Role of an IT Project Manager
2. Organizing the Work
 - 2.1 Project Breakdown Structure, Work Packages
 - 2.2 Prioritization
 - 2.3 Time Planning, Milestones, Gantt-Diagram
 - 2.4 Definition of Done

3. Cost Estimation and Controlling
 - 3.1 Challenges of Cost Estimation in IT Projects
 - 3.2 Estimation Techniques: 3-Point Estimation, Double Blind Expert Estimation, Function Points
 - 3.3 Cost Controlling Using Earned Value Analysis
 - 3.4 Risk Management
4. The Human Factor
 - 4.1 Vision Keeping
 - 4.2 Stakeholder Management
 - 4.3 Conflict Management
5. Organizing Small and Medium Projects
 - 5.1 Rational Unified Process (RUP)
 - 5.2 Agile Software Processes
 - 5.3 Scrum
 - 5.4 Plan-driven Project Management in Small Projects
6. Organizing Large Projects
 - 6.1 PMBOK Guide
 - 6.2 Prince2
 - 6.3 Multi Project Management
 - 6.4 Agile Software Processes in Large Projects
 - 6.5 Selection of the Appropriate Project Management Method

Learning Outcomes

Change Management

On successful completion, students will be able to

- recognize common features of organizational change and anticipate some of the standard difficulties encountered when an organization engages in change processes.
- explain the importance of organizational change.
- develop a conceptual framework for planned and improvised organizational change, and differentiate between anticipated, emergent, and opportunity-based change.
- utilize and redesign formal organizational structures to facilitate change processes.
- recognize the role of informal organizational structures and identify key stakeholders to promote change processes.
- analyze the social networks that exist within an organization, map independencies and motives/interests, and plan how to distribute information and redesign work flows.
- differentiate between groups of stakeholders and identify the most suitable strategy to adopt with each group.
- recognize the role of the change leader as a political broker and build social capital through informal methods.
- utilize stories and symbols when communicating with others in an organization to maximize leverage as a cultural change leader.
- draw on empirical evidence to plan and implement change processes in an organization.

Change Management

Course Code: DLMBCM01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

We live in a world characterized by constant change. This affects not only individuals but also organizations. Even successful organizations need to constantly reinvent themselves in order to remain successful. This course presents a discussion of change in relation to the complexities of organizational life, with an emphasis on applying theory to actual practice. Organizational change is an international phenomenon and the course includes many international case examples. With a focus on organizational change as opposed to personal change and/or entrepreneurship, this course has a distinctly different focus from the related modules “Leadership” and “Innovation and Entrepreneurship.” The first part of the course considers the nature of change and different change models. The second part focuses on how different perspectives complement one another and can be used to better understand, analyze, and diagnose change processes. The course deals with issues of structure, culture, and politics. In the later part of the course, the implementation of change is considered in detail. Given that many change processes fail, this part is an important learning component to complement an in-depth understanding of change.

Course Outcomes

On successful completion, students will be able to

- recognize common features of organizational change and anticipate some of the standard difficulties encountered when an organization engages in change processes.
- explain the importance of organizational change.
- develop a conceptual framework for planned and improvised organizational change, and differentiate between anticipated, emergent, and opportunity-based change.
- utilize and redesign formal organizational structures to facilitate change processes.
- recognize the role of informal organizational structures and identify key stakeholders to promote change processes.
- analyze the social networks that exist within an organization, map independencies and motives/interests, and plan how to distribute information and redesign work flows.
- differentiate between groups of stakeholders and identify the most suitable strategy to adopt with each group.
- recognize the role of the change leader as a political broker and build social capital through informal methods.
- utilize stories and symbols when communicating with others in an organization to maximize leverage as a cultural change leader.
- draw on empirical evidence to plan and implement change processes in an organization.

Contents

1. Organizational Change
 - 1.1 What is Organizational Change About?
 - 1.2 Organizational Change is Ubiquitous
 - 1.3 Change is Difficult
2. Change Management
 - 2.1 The Context of Organizational Change
 - 2.2 Planned Versus Improvisational Change Management
 - 2.3 The Congruence Model of Change
3. Designing Structure
 - 3.1 Formal Structure in Organizations
 - 3.2 Grouping
 - 3.3 Linking
 - 3.4 The Change Leader as an Architect
4. Social Networks
 - 4.1 What are Social Networks?

Agile Project Management

Course Code: DLMIEEAPM01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Agile methods accelerate the development and delivery of a product or service by the division of tasks into short phases of work and frequent reassessment and adaptation of plans. While originally used for software programming, the agile methodology has become a widely used approach in many areas of business. When applied to project management situations, agile contributes to a more flexible planning, a faster determining of the requirements and a more effective executing of a project. The concept of agile is based on the Agile Manifesto which includes four key values and twelve main principles to guide an iterative and people-centric managing of projects. In this course, students are introduced to the agile project management framework with an emphasis on the product owner's role. They learn how to develop the product vision and the product roadmap, organize the project team, identify user roles, write user stories and establish an operant project risk management. This way, students shall also develop a mindset for the agile methodology. The course puts a special emphasis on the Scrum and Kanban framework as two main pillars to agilely manage projects within and across organizations.

Course Outcomes

On successful completion, students will be able to

- understand the significance of agile methods to efficiently and effectively manage projects within and across organizations.
- compare the major characteristics of traditional and agile approaches to project management.
- apply the Scrum methodology as a main framework of agile project management.
- apply the Kanban methodology as a main framework of agile project management.
- implement agile value-driven strategies and effective agile product roadmaps into the organization.
- judge the scaling of agile practices across the entire organization.

Contents

1. Fundamentals of Agile Methods in Project Management
 - 1.1 Definition and Significance of Agile Methods in Project Management
 - 1.2 The Agile Manifesto
 - 1.3 The Agile Values and Principles

2. Traditional and Agile Approaches to Project Management
 - 2.1 Traditional Approaches to Project Management
 - 2.2 Agile Approaches to Project Management
 - 2.3 Comparison of Traditional versus Agile Project Management
3. Agile Project Management with Scrum
 - 3.1 Scrum Values and Principles
 - 3.2 Scrum Roles, Events and Artifacts
 - 3.3 Application Areas of Scrum
4. Agile Project Management with Kanban
 - 4.1 Kanban Values and Principles
 - 4.2 Kanban Boards and Cards
 - 4.3 Application Areas of Kanban
5. Implementing Agile within the Organization
 - 5.1 Implementing Agile Value-driven Delivery Strategies
 - 5.2 Creating an Effective Agile Product Roadmap
 - 5.3 Coaching an Agile Team
6. Expanding Agile across the Organization
 - 6.1 Agile at Scale Practices across the Organization
 - 6.2 Agile Portfolio Management
 - 6.3 Scaled Agile Framework (SAFe)

Interview and Communication Techniques

Course Code: DLMWPGUK01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Good communication skills are the key to professional success. To achieve professional goals, you have to be convincing in conversations. Only those who really understand their conversation partners and are also understood by them, will achieve a good result more quickly. To achieve this, it is essential to be prepared, especially for difficult conversations, and to have a toolbox of different conversation techniques at your disposal, so that can be used in a targeted manner to make constructive communication possible. In addition to certain means of communication, this also requires special techniques and methods. Knowledge and understanding of the psychological and human aspects of the use of communication techniques and the conduct of discussions are an important basis for the success of discussions in the context of business psychology. The course also addresses difficult and critical discussion situations as well as communication with specific target groups. Students learn about different communication styles, communication techniques as well as the phases of conducting discussions in order to specifically prepare for and conduct discussions with other team members as well as external partners. You will learn how to better adapt to your conversation partners and act accordingly in order to achieve good results for both sides.

Course Outcomes

On successful completion, students will be able to

- place the importance of the areas of communication techniques and interviewing in the overall context of business psychology,
- identify goals and forms of communication and interviewing in the context of business psychology,
- use and apply means, methods and instruments of communication and conversation in the context of business psychology,
- identify and understand purposeful communication and conversation management techniques against the backdrop of difficult and deadlocked situations,
- explain and develop appropriate measures of communication and conversation,
- discuss and uncover problems of communication and conversation and suggest alternative approaches.

Contents

1. Forms of Communication
 - 1.1 Mutual Influence through Communication
 - 1.2 Verbal Communication
 - 1.3 Paraverbal Communication
 - 1.4 Nonverbal Communication
 - 1.5 Extraverbal Communication
 - 1.6 Intrapersonal vs. Interpersonal Communication
2. Means of Communication
 - 2.1 Communication Styles
 - 2.2 Rhetoric
 - 2.3 Special Forms of Communication: Rapport, Pacing and Calibration
 - 2.4 Presuppositions and Submodalities
3. Communication Techniques
 - 3.1 You vs. Me Messages
 - 3.2 Paraphrase
 - 3.3 Questioning Techniques and Methods
 - 3.4 Reframing
 - 3.5 Chunking as a Questioning Technique
 - 3.6 Change of Perspective
4. Communication with Specific Groups
 - 4.1 Communication in the Organization
 - 4.2 Communication with Colleagues, Team Members and Superiors
 - 4.3 Communication with Customers
 - 4.4 Communication with Service Providers
 - 4.5 Communication with the Public
 - 4.6 Communication with Journalists
5. Conversation Management
 - 5.1 Factual and Relationship Level
 - 5.2 Conversation Goals and Position
 - 5.3 Argumentation Strategy
 - 5.4 Conversation Planning and Structuring
 - 5.5 Conversation Setup and Control
 - 5.6 Conversation Analysis

6. Special Features of the Conversation
 - 6.1 Shaping the Relationship Level
 - 6.2 Conversation Traps and Conversation Disorders
 - 6.3 Recognize and Master Critical Conversation Situations
 - 6.4 Feedback Rules
7. Dealing with Difficult Conversation Situations
 - 7.1 Acting in Deadlocked Situations
 - 7.2 Dealing with Resistance
 - 7.3 Personal Aspects in Conversations

Project Controlling

Course Code: DLMPREPC01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

A project is a temporary undertaking pursuing specific objectives which are outside the realm of daily business of an organization. To implement a project, a temporary project organization is being set up with individual team members taking on defined roles for the duration of the project. One such role is that of a project controller, which – in smaller projects – can be filled with the project manager him- or herself, or – in larger projects – can be taken on by a separate person. Either way, the goal of project controlling is to track and control the progress of the project and to measure success in terms of objectives, timeline, and budget. In this course, methods for data collection, data analyses, and typical graphs are introduced for application in project controlling. Also, the tools of project key performance indicators (KPI) and project balanced score cards (PBSC) will be discussed. Special emphasis will be placed also on risk containment and risk management. Both for management as well as for the team itself, a regular reporting using a standardized form of presenting the data is helpful. Actual to plan comparisons, description of special occurrences, root-cause analysis of deviations, and a summary of defined actions and recovery plans form the base content of such reports. Examples for reports for use in the operational work of the team on the one side, and in regular management updates on the other side, will be presented.

Course Outcomes

On successful completion, students will be able to

- describe the goals, contents, and processes of the project controlling cycle.
- formulate metrics for measuring project progress, develop key performance indicators and project balanced score cards.
- monitor work progress and deviations from plan, initiate action plans.
- guide risk analyses, quantify risk levels and define adequate countermeasures.
- create and present project progress reports suitable for management and team.
- guide organizational learning of the project.

Contents

1. Projects and Objectives
 - 1.1 Reasons for Starting a Project
 - 1.2 Classical and Agile Project Methods
 - 1.3 Options for Choice of Project Organization
 - 1.4 Roles and Responsibilities
 - 1.5 Defining Project Objectives

2. Controlling Instruments
 - 2.1 Controlling and Project Controlling
 - 2.2 Cost Structure, Cost Types, and Cost Centers
 - 2.3 Estimating, Planning, and Scheduling
 - 2.4 Budgeting and Capacity Planning
 - 2.5 Application of Standard Controlling Tools
3. Controlling Process for Projects
 - 3.1 Project Controlling vs. Project Management
 - 3.2 The Project Controlling Cycle
 - 3.3 Metrics and Key Performance Indicators (KPI)
 - 3.4 Project Balanced Scorecard (PSC/PBSC)
 - 3.5 Controlling in Agile Environment
4. Deviations and Recovery Plan
 - 4.1 Progress and Cost Tracking
 - 4.2 Data Collection, Data Analysis, and Graphs
 - 4.3 Actual to Plan Analysis
 - 4.4 Deviations and Root-cause Analysis
 - 4.5 Action and Recovery Plans
5. Project Risk Management
 - 5.1 Project Risk Categories
 - 5.2 Performing an FMEA
 - 5.3 Risk Management
 - 5.4 Learning Curves
6. Project Reporting
 - 6.1 Status Report
 - 6.2 Financial Report
 - 6.3 Gap Analysis and Recovery Plan
 - 6.4 Steering Recommendations
 - 6.5 Management Reporting

Module Contents

In this course the theoretical knowledge is practically applied, discussed and evaluated in an online simulated project with real background.

Learning Outcomes

Online Project Simulation

On successful completion, students will be able to

- prepare a project report taking into account the requirements of a scientific paper.
- understand the planning of strategies for projects at different levels and to evaluate it considering the project conception in practice.
- apply and implement the acquired knowledge in the field of project management in their own company by means of a concrete project.
- develop their skills to engage in discourses as part of the online simulation and to improve their social skills and creative competence.
- analyze practical situations and challenges, to develop and reflect on project-based solutions, and to implement them in a goal-oriented manner.
- practice and apply online communications methods.
- derive their own tools to lead a project to success in a structured manner within the company.
- identify and implement timelines for the execution of the project.
- recognize hurdles within a project and independently develop solutions.

Online Project Simulation

Course Code: DLMPRWOPS02_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

The course deals with the expansion of the basic knowledge of project management methods and their application. This takes place within the framework of an online simulation. In doing so, know-how regarding the processes within a project is built up and individual methods are practically applied in the online simulated project.

Course Outcomes

On successful completion, students will be able to

- prepare a project report taking into account the requirements of a scientific paper.
- understand the planning of strategies for projects at different levels and to evaluate it considering the project conception in practice.
- apply and implement the acquired knowledge in the field of project management in their own company by means of a concrete project.
- develop their skills to engage in discourses as part of the online simulation and to improve their social skills and creative competence.
- analyze practical situations and challenges, to develop and reflect on project-based solutions, and to implement them in a goal-oriented manner.
- practice and apply online communications methods.
- derive their own tools to lead a project to success in a structured manner within the company.
- identify and implement timelines for the execution of the project.
- recognize hurdles within a project and independently develop solutions.

Contents

- The course expands on the combination of knowledge and skills from project management and strategic management. The knowledge of general methods and procedures for developing and implementing corporate strategies is now used and applied in conjunction with a concrete project taking place in the online simulation. The results will be evaluated in two different ways: Firstly, in the form of immediate feedback after completion of the online simulation, supplying the student with a description of the implemented actions and their classification in the simulated project events. This shows the self-selected measures for fulfilling the project-based specifications and for solving the problem considering the requirements. The student is thus able to reflect on his/her own decisions. Secondly, in the form of a written assignment. Here, students combine their learned and experienced specialized knowledge in these areas with their work in the online project. The way of

implementing the specialized knowledge in practice has to be described and discussed in written form. This written assignment is about applying and critically reflecting on the general approaches and procedures on the basis of given standards in an online project. The report must meet scientific criteria, which includes in particular, in addition to the formal requirements, a literature research and the scientific-methodical foundation of the online project simulation. The necessary entrepreneurial questions are to be recognized, analyzed and processed on the basis of scientific methods. This allows students to reflect on the application of acquired knowledge when working on the online simulated project and to critically discuss the relationships between scientific knowledge, complex action situations and their own person.

Module Contents

- The nature of international business and multinational enterprises
- Strategic management and globalization
- International business operations management
- Organizational structures of international business
- Cultural diversity and international business

Learning Outcomes

Managing in a Global Economy

On successful completion, students will be able to

- Recognize and explain the cultural, social, economic, historical, and political differences that affect strategic decision making on an international/global scale.
- Gather specific information and conduct reliable assessments of the opportunities and risks related to business activities in different geographical market regions and specific national markets.
- Describe the impact of culture on international business activities.
- Identify different options for market entry and market development and participate in strategic planning activities that address these issues.
- Design and evaluate different organizational structures for international businesses and design measures to optimize organizational structures for international operations.
- Design, evaluate, and optimize human resource management practices for global and multinational companies.
- Explain options for international marketing and select an appropriate marketing mix relative to specific products/services and the target market.
- Plan multinational or global supply chains.
- Oversee strategic decisions regarding international accounting practices and the remuneration of expatriate staff.
- Identify and manage challenges associated with operating in an international/global business environment, such as the procurement and coordination of resources and human resource management.
- Develop business plans that implement specific organizational, marketing, and distribution strategies in selected regions/countries.

Managing in a Global Economy

Course Code: DLMBGE01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

The internationalization and globalization of product and service markets has meant that industries and economies worldwide are increasingly subject to competition and change. Nowadays, it is essential for the viability and profitability of companies that they adopt a global mindset. Establishing a business and operating in an international context offers a company many unique opportunities, but importantly, multiple diverse threats emerge in this context. An elevated level of international competition, increasing client mobility in a globalized marketplace, discriminatory practices of foreign governments, and subtle cultural differences mean that running an efficient and profitable international business is exceedingly challenging and the likelihood of failure is high. The course is designed to cover the economic, organizational, and cultural underpinnings that students need to grasp in order to better understand the managerial challenges that global organizations of all types and sizes have to cope with. Participants will gain the detailed knowledge and practical experiences they require to understand how organizations can achieve a competitive advantage in a globalized world. This course includes an optional international field trip (Note: special conditions apply - availability depends on demand, special conditions apply). This course will enable students to describe and contrast a set of sustainable corporate and functional strategies in the context of globalization. They will have a detailed understanding of the extent to which globalization and internationalization strategies affect the organizational structures and value creation of global firms.

Course Outcomes

On successful completion, students will be able to

- Recognize and explain the cultural, social, economic, historical, and political differences that affect strategic decision making on an international/global scale.
- Gather specific information and conduct reliable assessments of the opportunities and risks related to business activities in different geographical market regions and specific national markets.
- Describe the impact of culture on international business activities.
- Identify different options for market entry and market development and participate in strategic planning activities that address these issues.
- Design and evaluate different organizational structures for international businesses and design measures to optimize organizational structures for international operations.
- Design, evaluate, and optimize human resource management practices for global and multinational companies.
- Explain options for international marketing and select an appropriate marketing mix relative to specific products/services and the target market.
- Plan multinational or global supply chains.
- Oversee strategic decisions regarding international accounting practices and the remuneration of expatriate staff.
- Identify and manage challenges associated with operating in an international/global business environment, such as the procurement and coordination of resources and human resource management.
- Develop business plans that implement specific organizational, marketing, and distribution strategies in selected regions/countries.

Contents

1. Introduction to Managing in a Global Economy
 - 1.1 What is Globalization?
 - 1.2 Facts on Globalization and the Global Economy
 - 1.3 Theoretical Explanations for Globalization
2. The International Company and its Environment
 - 2.1 International Companies and their Operations
 - 2.2 Operational Patterns in International Markets
 - 2.3 Assessment of the Environment for Internationalization
3. Culture and International Business
 - 3.1 A Generic Perspective on Culture
 - 3.2 Organizational Culture
 - 3.3 Cultural Diversity and the Contemporary Manager

4. Strategy Development in International Business
 - 4.1 Strategy in Globalized Business Operations
 - 4.2 Strategy Concepts and Strategic Options
 - 4.3 Managing Strategy
5. International Human Resource Management
 - 5.1 Characteristics of International Human Resource Management
 - 5.2 The Global Manager
 - 5.3 Instruments in International Human Resource Management
6. Organization in International Business
 - 6.1 Traditional Perspectives on Business Organization
 - 6.2 Modern Views on Business Organization
 - 6.3 Coordination and Control of Intra-Organizational Collaboration
7. International Marketing
 - 7.1 Marketing in International Business
 - 7.2 Strategic Choices in International Marketing
 - 7.3 Marketing Mix Choices in International Marketing
8. Supply Chain Management and Accountancy in International Business
 - 8.1 Supply Chain Management and International Business
 - 8.2 Quality, Supplier Networks, and Inventory in Supply Chain Management
 - 8.3 Accounting in International Business

Process Management with Scrum

Course Code: DLMPREEPMS01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Within the broad field of project management, Scrum falls into the category of agile methods. As such, Scrum is more of a process management framework than a project management method. In this course the Scrum framework will be described and discussed in detail. The Agile Manifesto will be introduced, and the basic idea of iterative and incremental development will be discussed, leading up to the methodology of Scrum. A thorough review will be done on the different roles within the Scrum team. The terms product backlog, refinement and increment are defined and explained. As core feature of Scrum, the execution of sprints and daily scrums will be detailed. For the practical application of Scrum, the handling of requirements and creation of user stories will be introduced. The student also gets to know the little tools for communication and task-tracking used within development teams. Furthermore, the student will learn when and how a Scrum process should be implemented and what kind of benefits and risks can be expected from it.

Course Outcomes

On successful completion, students will be able to

- understand and explain the contents of the agile manifest.
- understand Scrum as a framework for developing, delivering, and sustaining products in a complex environment.
- describe each of the roles within a Scrum team and explain each item and each step within the Scrum process.
- handle the refinement process of the product backlog and discuss the interaction within the team and to the outside world during and after a sprint.
- understand the concept of user stories and apply the method to simple cases.
- understand and describe possibilities for the scaling of Scrum.

Contents

1. Scrum Origin, Basic Idea and Fields of Application
 - 1.1 The Birth of Scrum – How and Why it All Began
 - 1.2 The Agile Manifesto and a Change in Perspective
 - 1.3 The Approach of Iterative and Incremental Development
 - 1.4 Defining Fields for Scrum and Fields for Not Scrum

2. Scrum Roles
 - 2.1 The Development Team
 - 2.2 The Product Owner
 - 2.3 The Scrum Master
 - 2.4 The Customer Involvement
 - 2.5 The Organization
3. Product Backlog and Sprint Planning
 - 3.1 Principles of a Product Backlog
 - 3.2 Refinement Process
 - 3.3 Definition of Ready
 - 3.4 Determining Capacity
 - 3.5 Selecting Items and Defining the Sprint Goal
4. Executing the Scrum Process
 - 4.1 The Scrum Process
 - 4.2 Sprint Cycle
 - 4.3 Daily Scrum
 - 4.4 Sprint Review
 - 4.5 Sprint Retrospective
5. Helpful Tools
 - 5.1 Requirements and User Stories
 - 5.2 Planning Poker
 - 5.3 Communication Tools (e. g. Task Board)
 - 5.4 Tracking Tools (e. g. Burn-down Chart)
 - 5.5 Available Software Tools
6. Implementation and Scaling of Scrum
 - 6.1 Implementation of Scrum in a Company
 - 6.2 Chances, Risks, and Limitations of Scrum
 - 6.3 Scrum of Scrums
 - 6.4 The Nexus Framework for Scaling Scrum
 - 6.5 Other Approaches

Project: Corporate Project with Scrum

Course Code: DLMPREEPMS02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMEPREPMS01

Course Description

The course „Project: Corporate Project with Scrum” is building on the basic knowledge of the Scrum Framework acquired in the previous course. The theoretical foundations of Scrum can be applied within a real company environment. The student experiences the advantages of agile work and can reflect on the Scrum roles in practice. The student is also confronted with the hurdles that arise in applying the methodology in a real situation and can experiment with own approaches to solutions.

Course Outcomes

On successful completion, students will be able to

- understand Scrum and its roles within the context of a corporate organization.
- explain the elements and processes of Scrum in detail and out of practical experience.
- create user stories, refine the product backlog and select items for a sprint.
- collaborate in the daily scrum and apply the little tools within the development team.
- discuss critically the benefits and limitations of the Scrum framework.

Contents

- The course „Project: Corporate Project with Scrum” is building on the basic knowledge of the Scrum Framework acquired in the previous course and on the general knowledge of management know-how and classical project management acquired during the previous semesters. Based on a real task to be resolved within an organization (commercial enterprise, public administration, or the like), the students can gain practical experience working with agile methods utilizing the Scrum Framework.
- The students will reflect critically on the similarities and differences they observed and, if applicable, also compare the experienced agile methods with classical methods of project management. To meet scientific criteria, a literature search and a thorough comparison of the scientific and methodological foundation to the practical aspects experienced in the project is strongly encouraged and supported. The business aspect (costs, gain, time, quality, strategic relevance, etc.) of the project should be recognized and analyzed based on scientific methods. The students will demonstrate their ability to combine specialist knowledge and transfer of this knowledge to a specific project in a professional environment. They will also critically reflect on the experienced own work with Scrum, as well as on the theoretical concept of the Scrum Framework itself.

Project Management with PRINCE2®

Course Code: DLMPREEMPR01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Within the broad field of project management methods, the original PRINCE2® method falls into the category of classical (non-agile) methods. It is one of the leading classical project management methods. PRINCE2® is process-oriented and primarily concerned with the actions of the project management team, putting emphasis on the management aspect of a project rather than the execution side. In this course the PRINCE2® framework will be systematically described and discussed in detail. A thorough review will be done on the seven Principles, the seven Themes, the seven Processes, and on Tailoring of the project to the environment. This will be put in relation to the defined roles within the PRINCE2® project management team structure. In this course, in addition to the actions and processes handled by the project management team, the work of the task managers will be reviewed, some of the most important tools for execution of tasks will be introduced and a possible combination with the PMBOK from the PMI will be discussed. The student will learn about the well-structured interaction between project management level and project execution level including the reporting cycles. At the end of the course an outlook on the features of PRINCE2® Agile will be given. The student will gain a thorough understanding of the advantages and disadvantages of the PRINCE2® method and its derivatives.

Course Outcomes

On successful completion, students will be able to

- understand and explain the contents of the PRINCE2® framework.
- explain the seven Principles, seven Themes, seven Processes and Tailoring of the project environment.
- describe each of the roles within a PRINCE2® management team.
- explain, how the stages are connected by the defined processes.
- define reporting cycles according to the PRINCE2® guidelines.
- understand and describe how PRINCE2® can be combined with other project management methods and what additional options PRINCE2® Agile is offering.

Contents

1. Introduction to the PRINCE2® Method
 - 1.1 History of PRINCE2®
 - 1.2 Project Definition
 - 1.3 The Seven Principles
 - 1.4 The Project Management Team – Structure and Roles
 - 1.5 Management Products and Specialist Products
2. The Seven Themes
 - 2.1 Introduction to Themes
 - 2.2 Business Case
 - 2.3 Organization
 - 2.4 Quality
 - 2.5 Plans
 - 2.6 Risk
 - 2.7 Change
 - 2.8 Progress
3. The Seven Processes
 - 3.1 Overview and Interaction of the Processes
 - 3.2 Starting up a Project
 - 3.3 Initiating a Project
 - 3.4 Directing a Project
 - 3.5 Controlling a Stage
 - 3.6 Managing Product Delivery
 - 3.7 Managing Stage Boundaries
 - 3.8 Closing a Project
4. Creation of Results
 - 4.1 Creation of Management Products
 - 4.2 Creation of Specialist Products
5. Tailoring
 - 5.1 Tailoring of PRINCE2® to the Organization
 - 5.2 Scaling of PRINCE2® by Combining Roles
 - 5.3 Combining PRINCE2® with other Project Management Methods

6. PRINCE2® Agile
 - 6.1 Goal of PRINCE2® Agile
 - 6.2 Overview over PRINCE2® Agile
 - 6.3 Similarities and Differences to the Original PRINCE2®

Project: Corporate Project with PRINCE2®

Course Code: DLMPREEMPR02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMPREEMPR01

Course Description

The course „Project: Corporate Project with PRINCE2®“ is building on the basic knowledge of the PRINCE2® framework acquired in the previous course. The studied theoretical concept can be applied within a real company environment. The student experiences the advantages of project management in stages and can reflect on the relation between project management and task execution. The student is also confronted with the hurdles that arise in applying the methodology in a real situation and can experiment with own approaches to solutions.

Course Outcomes

On successful completion, students will be able to

- understand PRINCE2® and its principles within the context of a corporate organization.
- explain the PRINCE2® Project Management structure as well as the themes and processes of PRINCE2® in detail and out of practical experience.
- set up a Project Management Team with its associated roles.
- start and initiate a project and plan a project stage.
- work with and create management products and specialized products.
- discuss critically the benefits and limitations of the PRINCE2® framework.

Contents

- The course „Project: Corporate Project with PRINCE2®“ is building on the basic knowledge of the PRINCE2® framework acquired in the previous course and on the general knowledge of management know-how and classical project management acquired during the previous semesters. Based on a real task to be resolved within an organization (commercial enterprise, public administration, or the like), the students can gain practical experience in setting up a project management team according to PRINCE2®.
- The students will reflect critically on the similarities and differences they observed, and, if applicable, also compare the experienced classical methods with agile methods of project management. To meet scientific criteria, a literature search and a thorough comparison of the scientific and methodological foundation to the practical aspects experienced in the project is strongly encouraged and supported. The business aspect (costs, gain, time, quality, strategic relevance, etc.) of the project should be recognized and analyzed based on scientific methods. The students will demonstrate their ability to combine specialist knowledge and transfer of this knowledge to a specific project in a professional environment. They will also critically reflect on the experienced own work with PRINCE2®, as well as on the theoretical concept of the PRINCE2® framework itself.

Module Contents**Operations and Information Management**

- Preparation of Reliable Demand Forecasts
- Site Planning
- Process Design and Process Planning
- Inventory Management and Production Control
- Information Systems in the Supply Chain
- Behavioral Operations Management

Project: Operations Projects

The course is building on the basic knowledge of operations and information management as well as on general project management know-how. The students apply a selection of the learned methods in a project for improvement or change within the Operations unit of a company. The special challenges of running a project in the context of existing day-to-day routines is experienced.

Learning Outcomes**Operations and Information Management**

On successful completion, students will be able to

- apply selected and practice-oriented concepts of operations management in various tasks and draw appropriate conclusions for verifiable performance improvements.
- critically evaluate the benefits and limitations of modern and process-oriented software solutions in operations management.
- consider current and future developments in connection with the megatrends of digitization and climate protection in operations management.
- support the analysis, planning, and design of value-adding processes in supply chains through modern information systems.
- understand and anticipate the behavior of decision-makers and their individual preferences in order to better predict the actual behavior of the supply chain partners and optimize the achievement of own objectives.

Project: Operations Projects

On successful completion, students will be able to

- describe and explain the real-life operational work of a company.
- understand the implications of information management.
- analyze needs and opportunities for improvement of specific operational processes.
- define and set up a project within the operational environment.
- implement an improvement or change in operational processes.

Operations and Information Management

Course Code: DLMBAEOIM01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MBA	English		5	None

Course Description

Operations management comprises the planning, control, execution, and monitoring of all internal company resources and capacities for the manufacture of products and services. This course provides students with the knowledge and skills to apply theoretically-sound and practice-relevant concepts of operations management in the context of different problems and tasks (taking into account central megatrends) and draw process-relevant conclusions for verifiable performance improvements. The consideration of powerful software solutions plays an important role here. Starting from the creation of reliable demand forecasts, different scenarios for the optimal location decisions of companies are considered. The process design defines the basic framework for processes, decision rules, and process performance analyses. This then shows in the subsequent process planning how optimal sequences for orders are calculated under certain priority rules. In inventory management, various models for inventory optimization are considered in order to apply practice-relevant methods for calculating capacities and production plans, taking into account various restrictions. Supply chain management investigates how independent companies can optimally coordinate their activities and promote cross-company communication through the use of sustainable information systems. Concluding the course is an examination of human decision heuristics and preferences and their anticipation of decision behavior within the framework of behavioral operations management.

Course Outcomes

On successful completion, students will be able to

- apply selected and practice-oriented concepts of operations management in various tasks and draw appropriate conclusions for verifiable performance improvements.
- critically evaluate the benefits and limitations of modern and process-oriented software solutions in operations management.
- consider current and future developments in connection with the megatrends of digitization and climate protection in operations management.
- support the analysis, planning, and design of value-adding processes in supply chains through modern information systems.
- understand and anticipate the behavior of decision-makers and their individual preferences in order to better predict the actual behavior of the supply chain partners and optimize the achievement of own objectives.

Contents

1. Introduction to operations management
 - 1.1 Definition, subjects, and tools of operations management
 - 1.2 Operations management under circumstances of conflicting demands
2. Preparation of reliable demand forecasts
 - 2.1 The Forecast Problem
 - 2.2 Qualitative forecasting methods
 - 2.3 Causal and time series forecasts
 - 2.4 Assessment of forecast quality
3. Site planning
 - 3.1 Central problem aspects
 - 3.2 Arbitrary locations and transport costs
 - 3.3 Optimization with pre-determined locations
 - 3.4 Site selection and response times
4. Process design and process planning
 - 4.1 Process types
 - 4.2 Process structure
 - 4.3 Process performance
 - 4.4 Priority rules for planning and controlling processes
5. Inventory management and production control
 - 5.1 Models for optimizing stocks
 - 5.2 Continuous inventory management
 - 5.3 Function and application areas of MRP II and Just in Time
 - 5.4 Methods for optimal planning of capacities and production plans
6. Information systems in the supply chain
 - 6.1 Increased performance through product and process design
 - 6.2 Order policy, demand forecasts, and demand planning
 - 6.3 Hellingrath and Kuhn's three-pillar approach
 - 6.4 Requirements for supply chain information systems
 - 6.5 Market analysis of selected IT systems

- 7. Behavioral operations management
 - 7.1 Decision heuristics for solving complex problems
 - 7.2 Decision behavior and decision prognosis
 - 7.3 Decision influencing

Project: Operations Projects

Course Code: DLMPREEMO02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Operational processes have the characteristics of running an operation in steady state, without allowing changes to the work processes in place. Any project in the Operations arena must therefore be either an improvement or a change project. After analyzing needs for improvement in specific operational processes using methods of operations and information management, project management can be applied to initiate changes. The project definition and execution must consider the specifics of daily business in an operational environment.

Course Outcomes

On successful completion, students will be able to

- describe and explain the real-life operational work of a company.
- understand the implications of information management.
- analyze needs and opportunities for improvement of specific operational processes.
- define and set up a project within the operational environment.
- implement an improvement or change in operational processes.

Contents

- The course is building on the basic knowledge of operations and information management and on general project management know-how. As operational processes have the characteristics of running an operation in steady state, any project within Operations must address either an improvement or a change to the existing processes. After analyzing possible needs for improvement in specific operational processes – applying the structured analytical methodologies commonly used in operations management – appropriate project management methods can be applied to initiate the identified changes. The project definition and execution must consider the specifics of daily business in an operational environment. The students can gain practical experience in setting up and running a project without noticeably interrupting the ongoing operational processes.
- During their work, the students will have the opportunity to compare their real-life experience with the theoretical concepts. The students will reflect critically on the similarities and differences they observed. To meet scientific criteria, a literature search and a thorough comparison of the scientific and methodological foundation to the practical aspects experienced in the project is strongly encouraged and supported. The business aspect (costs, gain, time, quality, strategic relevance, etc.) as outcome of the analysis and as

project result should be recognized and discussed based on scientific methods. The students will demonstrate their ability to combine specialist knowledge and transfer of this knowledge to a specific project in a professional environment

Process Management with Scrum

Course Code: DLMPREEPMS01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Within the broad field of project management, Scrum falls into the category of agile methods. As such, Scrum is more of a process management framework than a project management method. In this course the Scrum framework will be described and discussed in detail. The Agile Manifesto will be introduced, and the basic idea of iterative and incremental development will be discussed, leading up to the methodology of Scrum. A thorough review will be done on the different roles within the Scrum team. The terms product backlog, refinement and increment are defined and explained. As core feature of Scrum, the execution of sprints and daily scrums will be detailed. For the practical application of Scrum, the handling of requirements and creation of user stories will be introduced. The student also gets to know the little tools for communication and task-tracking used within development teams. Furthermore, the student will learn when and how a Scrum process should be implemented and what kind of benefits and risks can be expected from it.

Course Outcomes

On successful completion, students will be able to

- understand and explain the contents of the agile manifest.
- understand Scrum as a framework for developing, delivering, and sustaining products in a complex environment.
- describe each of the roles within a Scrum team and explain each item and each step within the Scrum process.
- handle the refinement process of the product backlog and discuss the interaction within the team and to the outside world during and after a sprint.
- understand the concept of user stories and apply the method to simple cases.
- understand and describe possibilities for the scaling of Scrum.

Contents

1. Scrum Origin, Basic Idea and Fields of Application
 - 1.1 The Birth of Scrum – How and Why it All Began
 - 1.2 The Agile Manifesto and a Change in Perspective
 - 1.3 The Approach of Iterative and Incremental Development
 - 1.4 Defining Fields for Scrum and Fields for Not Scrum

2. Scrum Roles
 - 2.1 The Development Team
 - 2.2 The Product Owner
 - 2.3 The Scrum Master
 - 2.4 The Customer Involvement
 - 2.5 The Organization
3. Product Backlog and Sprint Planning
 - 3.1 Principles of a Product Backlog
 - 3.2 Refinement Process
 - 3.3 Definition of Ready
 - 3.4 Determining Capacity
 - 3.5 Selecting Items and Defining the Sprint Goal
4. Executing the Scrum Process
 - 4.1 The Scrum Process
 - 4.2 Sprint Cycle
 - 4.3 Daily Scrum
 - 4.4 Sprint Review
 - 4.5 Sprint Retrospective
5. Helpful Tools
 - 5.1 Requirements and User Stories
 - 5.2 Planning Poker
 - 5.3 Communication Tools (e. g. Task Board)
 - 5.4 Tracking Tools (e. g. Burn-down Chart)
 - 5.5 Available Software Tools
6. Implementation and Scaling of Scrum
 - 6.1 Implementation of Scrum in a Company
 - 6.2 Chances, Risks, and Limitations of Scrum
 - 6.3 Scrum of Scrums
 - 6.4 The Nexus Framework for Scaling Scrum
 - 6.5 Other Approaches

Project: Corporate Project with Scrum

Course Code: DLMPREEPMS02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMEPREPMS01

Course Description

The course „Project: Corporate Project with Scrum” is building on the basic knowledge of the Scrum Framework acquired in the previous course. The theoretical foundations of Scrum can be applied within a real company environment. The student experiences the advantages of agile work and can reflect on the Scrum roles in practice. The student is also confronted with the hurdles that arise in applying the methodology in a real situation and can experiment with own approaches to solutions.

Course Outcomes

On successful completion, students will be able to

- understand Scrum and its roles within the context of a corporate organization.
- explain the elements and processes of Scrum in detail and out of practical experience.
- create user stories, refine the product backlog and select items for a sprint.
- collaborate in the daily scrum and apply the little tools within the development team.
- discuss critically the benefits and limitations of the Scrum framework.

Contents

- The course „Project: Corporate Project with Scrum” is building on the basic knowledge of the Scrum Framework acquired in the previous course and on the general knowledge of management know-how and classical project management acquired during the previous semesters. Based on a real task to be resolved within an organization (commercial enterprise, public administration, or the like), the students can gain practical experience working with agile methods utilizing the Scrum Framework.
- The students will reflect critically on the similarities and differences they observed and, if applicable, also compare the experienced agile methods with classical methods of project management. To meet scientific criteria, a literature search and a thorough comparison of the scientific and methodological foundation to the practical aspects experienced in the project is strongly encouraged and supported. The business aspect (costs, gain, time, quality, strategic relevance, etc.) of the project should be recognized and analyzed based on scientific methods. The students will demonstrate their ability to combine specialist knowledge and transfer of this knowledge to a specific project in a professional environment. They will also critically reflect on the experienced own work with Scrum, as well as on the theoretical concept of the Scrum Framework itself.

Project Management with PRINCE2®

Course Code: DLMPREEMPR01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Within the broad field of project management methods, the original PRINCE2® method falls into the category of classical (non-agile) methods. It is one of the leading classical project management methods. PRINCE2® is process-oriented and primarily concerned with the actions of the project management team, putting emphasis on the management aspect of a project rather than the execution side. In this course the PRINCE2® framework will be systematically described and discussed in detail. A thorough review will be done on the seven Principles, the seven Themes, the seven Processes, and on Tailoring of the project to the environment. This will be put in relation to the defined roles within the PRINCE2® project management team structure. In this course, in addition to the actions and processes handled by the project management team, the work of the task managers will be reviewed, some of the most important tools for execution of tasks will be introduced and a possible combination with the PMBOK from the PMI will be discussed. The student will learn about the well-structured interaction between project management level and project execution level including the reporting cycles. At the end of the course an outlook on the features of PRINCE2® Agile will be given. The student will gain a thorough understanding of the advantages and disadvantages of the PRINCE2® method and its derivatives.

Course Outcomes

On successful completion, students will be able to

- understand and explain the contents of the PRINCE2® framework.
- explain the seven Principles, seven Themes, seven Processes and Tailoring of the project environment.
- describe each of the roles within a PRINCE2® management team.
- explain, how the stages are connected by the defined processes.
- define reporting cycles according to the PRINCE2® guidelines.
- understand and describe how PRINCE2® can be combined with other project management methods and what additional options PRINCE2® Agile is offering.

Contents

1. Introduction to the PRINCE2® Method
 - 1.1 History of PRINCE2®
 - 1.2 Project Definition
 - 1.3 The Seven Principles
 - 1.4 The Project Management Team – Structure and Roles
 - 1.5 Management Products and Specialist Products

2. The Seven Themes
 - 2.1 Introduction to Themes
 - 2.2 Business Case
 - 2.3 Organization
 - 2.4 Quality
 - 2.5 Plans
 - 2.6 Risk
 - 2.7 Change
 - 2.8 Progress

3. The Seven Processes
 - 3.1 Overview and Interaction of the Processes
 - 3.2 Starting up a Project
 - 3.3 Initiating a Project
 - 3.4 Directing a Project
 - 3.5 Controlling a Stage
 - 3.6 Managing Product Delivery
 - 3.7 Managing Stage Boundaries
 - 3.8 Closing a Project

4. Creation of Results
 - 4.1 Creation of Management Products
 - 4.2 Creation of Specialist Products

5. Tailoring
 - 5.1 Tailoring of PRINCE2® to the Organization
 - 5.2 Scaling of PRINCE2® by Combining Roles
 - 5.3 Combining PRINCE2® with other Project Management Methods

6. PRINCE2® Agile
 - 6.1 Goal of PRINCE2® Agile
 - 6.2 Overview over PRINCE2® Agile
 - 6.3 Similarities and Differences to the Original PRINCE2®

Project: Corporate Project with PRINCE2®

Course Code: DLMPREEMPR02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMPREEMPR01

Course Description

The course „Project: Corporate Project with PRINCE2®“ is building on the basic knowledge of the PRINCE2® framework acquired in the previous course. The studied theoretical concept can be applied within a real company environment. The student experiences the advantages of project management in stages and can reflect on the relation between project management and task execution. The student is also confronted with the hurdles that arise in applying the methodology in a real situation and can experiment with own approaches to solutions.

Course Outcomes

On successful completion, students will be able to

- understand PRINCE2® and its principles within the context of a corporate organization.
- explain the PRINCE2® Project Management structure as well as the themes and processes of PRINCE2® in detail and out of practical experience.
- set up a Project Management Team with its associated roles.
- start and initiate a project and plan a project stage.
- work with and create management products and specialized products.
- discuss critically the benefits and limitations of the PRINCE2® framework.

Contents

- The course „Project: Corporate Project with PRINCE2®“ is building on the basic knowledge of the PRINCE2® framework acquired in the previous course and on the general knowledge of management know-how and classical project management acquired during the previous semesters. Based on a real task to be resolved within an organization (commercial enterprise, public administration, or the like), the students can gain practical experience in setting up a project management team according to PRINCE2®.
- The students will reflect critically on the similarities and differences they observed, and, if applicable, also compare the experienced classical methods with agile methods of project management. To meet scientific criteria, a literature search and a thorough comparison of the scientific and methodological foundation to the practical aspects experienced in the project is strongly encouraged and supported. The business aspect (costs, gain, time, quality, strategic relevance, etc.) of the project should be recognized and analyzed based on scientific methods. The students will demonstrate their ability to combine specialist knowledge and transfer of this knowledge to a specific project in a professional environment. They will also critically reflect on the experienced own work with PRINCE2®, as well as on the theoretical concept of the PRINCE2® framework itself.

Industrial and Mobile Robots

Course Code: DLMAIEAR01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

The focus of this course is the theoretical foundation of mobile and industrial robotics. First, the basic concepts, architectural components (e.g., actuators and sensors), and challenges related to mobile and industrial robotics in the era of Industry 4.0 are presented. Next, the mathematical aspects concerning robot kinematics and trajectory planning are considered. These are necessary in order to define the operative task that a robot (mobile or industrial) must execute. The dynamics of a robotic system provides a mathematical model of the robot which can be exploited for simulation, design, and to control the task execution. There are various control architectures and approaches for robotic systems. This course focuses on the centralized and de-centralized architectures, as well as simple control design (e.g., proportional-integral-derivative control approaches). Finally, this course introduces the main software platforms and architectures used to control and exchange data with robots in a multi-agent environment, for instance, a manufacturing facility where many robots execute different tasks or must cooperate. The main patterns of such architectures and their uses are discussed. The adoption of model-based sensing/perception and control approaches yields intelligent systems which interact with the environment. This course concludes with an overview of behavior-based robotics, where robots are able to dynamically react to and learn from the real world.

Course Outcomes

On successful completion, students will be able to

- identify the main challenges of robotics in the era of Industry 4.0.
- understand the working principles of industrial and mobile robots.
- model a robotic system and design a motion control algorithm.
- use software platforms to command the execution of tasks and retrieve the execution status.

Contents

1. Introduction
 - 1.1 Robots and manufacturing
 - 1.2 Industrial robots
 - 1.3 Mobile robots
 - 1.4 Actuators for robotics
 - 1.5 Trends in robotics

2. Kinematics
 - 2.1 Position and orientation of a rigid body
 - 2.2 Joint kinematics
 - 2.3 Forward kinematics
 - 2.4 Inverse kinematics
 - 2.5 Differential kinematics
 - 2.6 Kinematics of mobile robots
3. Trajectory Planning
 - 3.1 Basic concepts
 - 3.2 Trajectories in the joints space
 - 3.3 Trajectories in the workspace
 - 3.4 Trajectory planning for mobile robots
4. Sensing and Perception
 - 4.1 Position
 - 4.2 Velocity
 - 4.3 Force
 - 4.4 Distance
 - 4.5 Visual
5. Fundamentals of Robot Dynamics
 - 5.1 Rigid body dynamics
 - 5.2 Lagrange formulation
 - 5.3 Newton formulation
 - 5.4 Direct and inverse dynamics
 - 5.5 Dynamics of mobile robots
6. Control of Robots
 - 6.1 Basic concepts
 - 6.2 Decentralized motion control
 - 6.3 Centralized motion control
 - 6.4 Force control

7. Architecture of Robotic Systems
 - 7.1 Architectural components
 - 7.2 Open Robot Control Software (OROCOS)
 - 7.3 Yet Another Robotic System Platform (YARP)
 - 7.4 Robot Operating System (ROS)
 - 7.5 Behavior-based robotics

Project: Collaborative Robotics

Course Code: DLMAIEAR02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMAIEAR01

Course Description

A collaborative robot is a robot which is used in collaborative operation, where humans and robots share the same workspace. This course focuses on the basic concepts of collaborative robotics, such as classification of human-robot interaction, definition of safe interaction, soft robotics and human-friendly robot design, and algorithms to guarantee such a safe interaction. The students will receive a hands-on introduction to the topic, with the goal of being able to autonomously design, simulate and test collaborative robotic systems.

Course Outcomes

On successful completion, students will be able to

- classify interactions between robots and humans.
- identify safety and risk scenarios.
- understand the principles of human-friendly robot design.
- apply algorithms for safe interaction.

Contents

- Each participant must create a project report on a topic related to collaborative robotics, focusing on design and/or implementation aspects.

Business Intelligence I

Course Code: DLMDSEBA01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Business Intelligence is about the generation of information based on operational data. It is used to enable goal-oriented management practices as well as the optimization of relevant business activities. This course introduces and discusses techniques, methods, and models for data provisioning and the generation, analysis, and dissemination of information.

Course Outcomes

On successful completion, students will be able to

- understand the motivations and use cases for, as well as fundamentals of, business intelligence.
- explain relevant types of data.
- know and disambiguate techniques and methods for modeling and dissemination of data.
- expound upon the techniques and methods for the generation and storage of information.
- select apposite business intelligence methods for given requirements.
- explain current and future business intelligence application areas.

Contents

1. Motivation and Introduction
 - 1.1 Motivation and historical development of the field
 - 1.2 Business intelligence as a framework
2. Data Provisioning
 - 2.1 Operative and dispositive systems
 - 2.2 The data warehouse concept
 - 2.3 Architecture variants
3. Data Warehouse
 - 3.1 The ETL-Process
 - 3.2 DWH and Data-Mart concepts
 - 3.3 ODS and meta-data

4. Modeling Multidimensional Dataspaces
 - 4.1 Data modeling
 - 4.2 OLAP-Cubes
 - 4.3 Physical storage concepts
 - 4.4 Star-Schema and Snowflake-Schema
 - 4.5 Historization
5. Analytical Systems
 - 5.1 Freeform data analysis and OLAP
 - 5.2 Reporting systems
 - 5.3 Model-based analytical systems
 - 5.4 Concept-oriented systems
6. Distribution and Access
 - 6.1 Information distribution
 - 6.2 Information access
7. Current and Future Business Intelligence Application Areas
 - 7.1 Mobile Business Intelligence
 - 7.2 Predictive and Prescriptive Analytics
 - 7.3 Artificial Intelligence
 - 7.4 Agile Business Intelligence

Project: Business Intelligence

Course Code: DLMDSEBA02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDSEBA01

Course Description

In this course the students will transfer knowledge of business intelligence approaches and methods to the implementation of a real-world business analytical use case. To accomplish this goal, students must look closely at the given task and find an appropriate approach by analyzing, evaluating, and comparing different solution strategies and their constituent parts. The found solution then has to be implemented in order to arrive at a running business analytical system.

Course Outcomes

On successful completion, students will be able to

- transfer knowledge of business intelligence methodology to real-world use cases.
- analyze the suitability of different approaches with respect to the project task.
- critically reason about relevant design choices.
- make appropriate architectural choices.
- formulate and implement a business intelligence use case.

Contents

- This second course in the Business Analyst specialization aims at the practical implementation of a business intelligence project. Students can choose from a list of project topics or contribute their own ideas.

Attack Scenarios and Incident Response

Course Code: DLMIMWCK01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

This course provides students with knowledge for identification and action planning in dealing with criminal offences in the digital environment. It describes how weaknesses in hardware and software and their application can be exploited for criminal activities. In addition, the course introduces typical threat scenarios and the ways in which attacking systems can penetrate a computer system. The course also introduces methods of electronic evidence and shows how legally usable information can be obtained in case of an attack. This is followed by a discussion of the development of preventive measures and the possibilities for reacting in the event of a concrete threat. The course concludes with a discussion of how information on the current security situation can be obtained from reports by security authorities (such as BSI, Europol, NCA, FBI).

Course Outcomes

On successful completion, students will be able to

- assess threat scenarios and their effects.
- name attack vectors and select adequate countermeasures.
- apply electronic evidence procedures to selected attack scenarios.
- develop preventive measures.
- identify reactive measures and assess their effectiveness.
- collect and evaluate information on the current threat situation.

Contents

1. Introduction
 - 1.1 Computer crime as distinct from other offences
 - 1.2 Vulnerabilities in computers and mobile devices
 - 1.3 An overview of malware
 - 1.4 Social engineering and the human factor
2. Criminal basis
 - 2.1 Identity abuse
 - 2.2 Theft of intellectual property
 - 2.3 Falsification of evidentiary data
 - 2.4 Computer fraud

3. Specific offences
 - 3.1 Data Theft
 - 3.2 Digital blackmailing
 - 3.3 Computer sabotage
 - 3.4 Industrial espionage
4. Attack vectors
 - 4.1 Attacks on Chip and Firmware Level
 - 4.2 Attacks at operating system level
 - 4.3 Attacks at network and server level
 - 4.4 Attacks at application level
 - 4.5 Attacks at the organizational level
5. IT forensics and electronic evidence
 - 5.1 Identification, localization and handling of polymorphisms
 - 5.2 Detection mechanisms
 - 5.3 Finding electronic evidence
 - 5.4 Data recovery and evidence recovery
 - 5.5 Legal limits and predictive policing
6. Preventive measures
 - 6.1 Measures on hardware level
 - 6.2 Access permission, authorization and authentication
 - 6.3 Awareness & Training
 - 6.4 Incident Response Planning
7. Reactive measures
 - 7.1 Initial assessment and extent of damage
 - 7.2 Prevention of persistent damage
 - 7.3 Collection, exchange and distribution of information
 - 7.4 Cooperation with security authorities and cooperation partners
 - 7.5 Recommended actions for companies
8. The current security situation
 - 8.1 Current reports of the safety authorities
 - 8.2 Evaluation of the recommendations of the safety authorities
 - 8.3 Current topics of the Europol Awareness Campaign

Project: Cyber Forensics

Course Code: DLMIMWCK02_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMIMWCK01_E

Course Description

This project aims to create an action plan for digital investigation and incident handling for a given threat scenario. Starting with a concrete suspicion of a computer-criminal act (e.g. a suspected server attack, loss of customer data or manipulation of business data) the students plan to conduct a digital investigation for electronic evidence and to secure evidence that can be used in court. The data obtained will be used to evaluate risks for affected business processes and to make recommendations for incident treatment and prevention.

Course Outcomes

On successful completion, students will be able to

- name basic methods and techniques of computer forensics and their limitations.
- identify the systems and business processes affected by a computer crime and carry out a risk assessment.
- recommend measures to secure electronic evidence and evaluate its usability in court.
- develop recommendations for incident communication, response and prevention.

Contents

- The project aims to develop an action plan for conducting a digital investigation and incident management for a given threat scenario. Beginning with the concrete suspicion of a computer crime*, the students develop a plan of action that covers the following measures:
 - Localization of the affected systems (hardware and software)
 - Identification of the affected business processes
 - Risk assessment for the impact on affected business processes
 - Communication with internal departments, cooperation partners, customers and the public
 - Identification and preservation of relevant data
 - Examination of the data
 - Securing electronic evidence and its usability in court
 - Recommendations for prevention
 - The action plan should be written in such a way that it serves as a process template for continuous incident handling.
- Examples of suspicious cases are a suspected server attack, loss of customer data, manipulation of business data, publication of internal company data, suspicion of product piracy, inconsistency of electronic signatures in company documents, digital blackmailing of a decision maker or suspicion of industrial espionage.

Module Contents

Data Engineering

- Principles of data engineering
- Paradigms for data processing at scale
- Overview on data governance, security, and protection
- Common cloud platforms
- DataOps approach

Project: Data Engineering

- Knowledge transfer and application to practical problems
- Implementation of a data infrastructure building block

Learning Outcomes

Data Engineering

On successful completion, students will be able to

- understand the foundational concepts in data engineering.
- categorize important data-processing classes.
- summarize common approaches to data governance and security and contribute to the broader societal discussion on an academic level.
- compare different common public cloud offerings.
- recognize current approaches to data operations (DataOps) including productivity tools to facilitate working in interdisciplinary teams.

Project: Data Engineering

On successful completion, students will be able to

- apply the principles of data engineering to a practical application.
- analyze data engineering approaches with respect to a given project task.
- reason about the benefits and drawbacks of solution alternatives for a given implementation task.
- make apposite architectural choices.
- implement aspects of a modern data pipeline abiding by strict data protection principles.

Data Engineering

Course Code: DLMDSEDE01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

The focus of this first course in the Data Engineering elective module is to introduce students to important principles, concepts, methods and approaches in this subject domain. In order to achieve this goal, the course moves from an exposition of the foundational principles of data engineering to a thorough treatment of the core data processing classes. Modern architectural paradigms such as Microservices are explained, and important factors in data governance and protection are addressed. In this context, students are enabled to reflect on modern data protection principles and their societal implications and implement these principles into large-scale data-intensive systems. Aspects of cloud computing are introduced via an overview of the most common offerings on the market. Finally, a state-of-the-art agile perspective on the operation of data pipelines is given by an exposition to the emerging notion of DataOps and the productivity tools around it to facilitate working in interdisciplinary teams.

Course Outcomes

On successful completion, students will be able to

- understand the foundational concepts in data engineering.
- categorize important data-processing classes.
- summarize common approaches to data governance and security and contribute to the broader societal discussion on an academic level.
- compare different common public cloud offerings.
- recognize current approaches to data operations (DataOps) including productivity tools to facilitate working in interdisciplinary teams.

Contents

1. Foundations of Data Systems
 - 1.1 Reliability
 - 1.2 Scalability
 - 1.3 Maintainability
2. Data Processing at Scale
 - 2.1 Batch Processing
 - 2.2 Stream and Complex Event Processing

3. Microservices
 - 3.1 Introduction to Microservices
 - 3.2 Implementing Microservices
4. Governance & Security
 - 4.1 Data Protection
 - 4.2 Data Security
 - 4.3 Data Governance
5. Common Cloud Platforms & Services
 - 5.1 Amazon AWS
 - 5.2 Google Cloud
 - 5.3 Microsoft Azure
6. Data Ops
 - 6.1 Defining Principles
 - 6.2 Containerization
 - 6.3 Building Data Pipelines

Project: Data Engineering

Course Code: DLMDSEDE02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDSEDE01

Course Description

The second course of the Data Engineering elective module builds upon theoretical and methodological insights from the first course. It provides opportunities for students to put their newly-acquired knowledge into practical application by completing a data engineering project. In order to find an appropriate and viable approach, students will have to reason about and evaluate the benefits and drawbacks of possible architectural choices. Once an informed decision has been met, the chosen approach is implemented as a running piece of data infrastructure.

Course Outcomes

On successful completion, students will be able to

- apply the principles of data engineering to a practical application.
- analyze data engineering approaches with respect to a given project task.
- reason about the benefits and drawbacks of solution alternatives for a given implementation task.
- make apposite architectural choices.
- implement aspects of a modern data pipeline abiding by strict data protection principles.

Contents

- The second course of the Data Engineering elective revolves around the implementation of a data engineering project chosen from a set of project suggestions. Students can also contribute their own project ideas.

International Marketing

Course Code: DLMMARE01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MBA	English		5	None

Course Description

The most important task of international marketing is recognizing which international markets and business-related dependencies should be targeted for the marketing of products and services. The course begins with defining key terms and concepts associated with the field of marketing management and then extrapolates these to the international context. The first section of the course equips students with an understanding of how to perform a structured analysis of international markets, using elements of the “PEST Analysis” (political, legal, economical, socio-cultural, and technological frameworks). Strategical aspects of marketing as well as instruments used to analyze the marketing mix are discussed as they relate to the international context. Inadequate consideration of marketing orientation as well as underestimating the impact of cultural differences both present serious threats to the success of any corporation. This course shall therefore analyze and discuss contemporary case studies involving multinational corporations to elucidate these potential threats. Industry-based case studies also offer students the opportunity to put into practice the knowledge and tools acquired in this course to address some of the specific challenges of international marketing.

Course Outcomes

On successful completion, students will be able to

- transfer well-known marketing management concepts to an international context, recognize limitations of their transferability, and continually develop these concepts.
- perform a structural analysis of the context surrounding specific internationalizing decisions, recognize the various contexts in these scenarios, and formulate alternative decisions.
- assess different strategic and political marketing alternatives in specific scenarios using relevant criteria and develop a decision template for developing marketing plans.
- combine actual issues from industry with the most recent scientific insights into successful marketing approaches in order to develop the skills and knowledge required to manage international marketing in a corporate setting.

Contents

1. Introduction to International Marketing
 - 1.1 Issues Related to International Marketing
 - 1.2 Environmental Factors in International Market Development
 - 1.3 Features of Buying Behavior in International Marketing

2. International Marketing Strategies
 - 2.1 Marketing Segmentation and Market Selection
 - 2.2 Market Entry Strategy
 - 2.3 Market Exit Strategy
3. International Market Research
 - 3.1 Qualitative and Quantitative Primary Research
 - 3.2 International Survey and Observations
4. International Marketing for Specific Sectors
 - 4.1 Industrial Goods Sector
 - 4.2 Consumer Goods Sector
 - 4.3 Wholesale and Retail Sector
 - 4.4 Service Sector
5. International Products
 - 5.1 Product Policy
 - 5.2 Product Mix and Degree of Standardization
 - 5.3 Brand Policy
6. International Pricing and Terms and Sales Policies
 - 6.1 Pricing on International Markets
 - 6.2 Types of Price Discrimination
 - 6.3 Credit and Discount Policy
7. International Promotion
 - 7.1 International Promotion
 - 7.2 International Promotion Mix
 - 7.3 Optimal Standardization
8. International Distribution
 - 8.1 Distribution Channels, Intermediaries, and Distribution Schemes
 - 8.2 Organizational Forms for International Market Development
 - 8.3 Potential for Standardization
9. International Marketing Mix
 - 9.1 Home Country Orientation
 - 9.2 Global Orientation
 - 9.3 Multinational Orientation

Marketing Project

Course Code: DLMMFS01_E

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

The module "Marketing Project" focuses on topics of operative marketing. In this seminar, students are familiarized with the methodology of developing a marketing project. Areas dealt with are research, methodology and analysis. Students learn how to introduce a product or service to the market by researching and defining all areas of the classic marketing mix. They define a target group, research the market, describe the product or service, develop a pricing strategy, create a communication and a distribution plan. Students are required to perform both primary and secondary research. In this seminar, students acquire basic practical knowledge by applying the theoretical approaches of the marketing mix to a real project. They collect data on the market and the target group and, based on this, work out a marketing plan including a rough business plan.

Course Outcomes

On successful completion, students will be able to

- transfer their knowledge of marketing to a practical example.
- know how to develop a marketing plan.
- create and develop a marketing plan independently using available data.

Contents

1. Choice of topics: Development of creative product or service ideas
2. Target group definition: Who is your client? How large is this market segment?
3. Market research: How big is the market for this product or service? What is the market trend?
4. Product definition: What is the core product or service you offer? What additional elements are part of this offer?
5. Pricing: How much will you sell the product or service for? What does the competition charge? What are your approximate costs? What is your target group willing to pay?
6. Communication: How do you communicate your offer to the target group? Through which communication channels?
7. Distribution: Which distribution channels are available?

Product Development

- Production planning techniques
- Design tasks
- Product development approaches
- Digital product development and organizational aspects

Design Thinking

This course will put students in the mindset of Design Thinking. Students will be introduced to phases and distinct methods for inspiration, as well as the ideation and implementation of products. A current list of topics is located in the Learning Management System.

Learning Outcomes

Product Development

On successful completion, students will be able to

- know the basic definitions and principles of (new) product development.
- understand the key skills in product development.
- discuss, differentiate, and select appropriate product development approaches with respect to a given scenario.
- work with digital product development tools and techniques like CAD, PDM and PLM at a basic level.
- develop own solutions and approaches to academic and practical questions.
- discuss, evaluate, and adapt different digital product development techniques and tools.

Design Thinking

On successful completion, students will be able to

- comprehend, critically reflect on, and adopt the Design Thinking mindset.
- understand the inspiration, ideation, and implementation phases.
- evaluate and identify appropriate methods from the toolbox of human-centered design for given design tasks and challenges.

Product Development

Course Code: DLMBPDDT01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

This course aims to provide basic work and problem-solving methods for the successful development of products. It introduces the definition of key design tasks and various alternative product development approaches such as flow-based, lean product development, and design thinking. Finally, the students will become familiar with the use of computer-aided design (CAD) tools and how they integrate into modern product development approaches.

Course Outcomes

On successful completion, students will be able to

- know the basic definitions and principles of (new) product development.
- understand the key skills in product development.
- discuss, differentiate, and select appropriate product development approaches with respect to a given scenario.
- work with digital product development tools and techniques like CAD, PDM and PLM at a basic level.
- develop own solutions and approaches to academic and practical questions.
- discuss, evaluate, and adapt different digital product development techniques and tools.

Contents

1. Introduction
 - 1.1 Basic Definitions
 - 1.2 The Product Development Process
 - 1.3 Indicators and Metrics
 - 1.4 Product Development Models
 - 1.5 Current Trends in Product Development
2. The Product Development Process
 - 2.1 Planning
 - 2.2 Concept Development
 - 2.3 Design
 - 2.4 Testing and Refinement
 - 2.5 Production and Ramp-up

3. Product Development Approaches
 - 3.1 Lean Product Development
 - 3.2 Design Thinking
 - 3.3 Human-Centered Design
 - 3.4 User Experience Strategy
 - 3.5 Open Innovation
4. Digital Tools
 - 4.1 Computer-Aided Design
 - 4.2 Computer-Aided Quality
 - 4.3 Product Data Management
 - 4.4 Product Lifecycle Management
5. Organizational Perspective
 - 5.1 Incremental, Platform, and Breakthrough Development
 - 5.2 Building Teams
 - 5.3 Political Issues in Organizations
 - 5.4 Distributed New Product Development

Design Thinking

Course Code: DLMBPDDT02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

In this course, students will receive a hands-on introduction to human-centered design via the Design Thinking method. Beyond conveying the individual basic principles, the procedures in Design Thinking are examined in detail. In order to fully understand Design Thinking in terms of important aspects in practice, selected methods for the individual process steps are presented in theory and application. Students will learn to improve their design process by reflecting on and adapting their activities.

Course Outcomes

On successful completion, students will be able to

- comprehend, critically reflect on, and adopt the Design Thinking mindset.
- understand the inspiration, ideation, and implementation phases.
- evaluate and identify appropriate methods from the toolbox of human-centered design for given design tasks and challenges.

Contents

- The course covers current topics and trends in Design Thinking, illustrating some methods and techniques as well as case studies. Each participant must create a project report on a chosen project, where he/she describes the application of the Design Thinking approach to a real product development scenario.

Module Contents**Industrial Automation**

- Mathematical Frameworks for the Formal Description of Discrete Event Systems
- Analysis and Evaluation Methods
- Simulation of Discrete Event Systems
- Supervisory Control
- Advanced Issues (Fault Diagnosis, Adaptive Supervision, Optimization)

Project: Technical Project Planning

In this course, students learn to apply the project management concepts they learned in previous modules in a real-world project.

Learning Outcomes**Industrial Automation**

On successful completion, students will be able to

- identify the main issues related to industrial automation and Industry 4.0 automation in particular.
- describe a discrete event system in a formal way by means of different mathematical models.
- analyze the performance of a system using formalisms and numerical simulation approaches.
- choose the best formalism for a given design scenario and formulate requirements.
- design and implement a supervisory controller to fulfill requirements.
- understand advanced topics related to Industry 4.0 industrial automation.

Project: Technical Project Planning

On successful completion, students will be able to

- apply the concepts of project management to real-world tasks and problems.
- translate the learned theories into the practice of project management.
- analyze a real-world problem and define and implement a project to resolve it.
- appraise the results of a project performed and identify what worked well and what did not.
- explain the work they perform, give its scientific background, and produce adequate documentation.

Industrial Automation

Course Code: DLMDSINDA01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

Production systems can be described as discrete event systems where the evolution is characterized by the occurrence of events. In the era of Industry 4.0 and highly-flexible manufacturing, there is the need to provide adequate means for the modeling, analysis, design, and control of flexible production environments. This course introduces several modeling approaches for the mathematical description of discrete event systems, such as Automata, Petri Nets, and Markov processes. Each approach is presented in both theory and practice with examples taken from the industry. The approaches are grouped into logic—where only the logic sequence of events determines the evolution—and timed, where the time schedule of the events also plays an important role. Although simple discrete event systems can be analyzed mathematically, complex systems need the support of computer simulation. The main issues concerning the simulation of discrete event systems are addressed. The final part of this course introduces the concept of supervisory control, which aims at changing the properties of a given system to improve specified behaviors and fulfill defined design specifications. Supervisory control is addressed both from the theoretical practical sides, describing how it can be implemented in a modern industrial environment. The course wraps up with discussion of interesting applications for modeling and design approaches, e.g., in the modeling and analysis of an industrial production unit. Additional conversation on topics like fault-diagnosis, decentralized and distributed supervision, optimization, and adaptive supervision provide a contingent connection between classical industrial automation and the recent, (big) data-driven, flexible, Industry 4.0 advanced industrial automation.

Course Outcomes

On successful completion, students will be able to

- identify the main issues related to industrial automation and Industry 4.0 automation in particular.
- describe a discrete event system in a formal way by means of different mathematical models.
- analyze the performance of a system using formalisms and numerical simulation approaches.
- choose the best formalism for a given design scenario and formulate requirements.
- design and implement a supervisory controller to fulfill requirements.
- understand advanced topics related to Industry 4.0 industrial automation.

Project: Technical Project Planning

Course Code: DLMDSETPL01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMBITPAM01

Course Description

The focus of this course is to apply the project management knowledge gained previously in a practical portfolio project and reflect on the results. Students engage in this portfolio project and document the results, reflecting on the project management concepts they apply and the influence of these concepts on the success of the project.

Course Outcomes

On successful completion, students will be able to

- apply the concepts of project management to real-world tasks and problems.
- translate the learned theories into the practice of project management.
- analyze a real-world problem and define and implement a project to resolve it.
- appraise the results of a project performed and identify what worked well and what did not.
- explain the work they perform, give its scientific background, and produce adequate documentation.

Contents

- In this course, students perform and document a portfolio project in which they apply the project management topics covered in previous modules.

Module Contents**User Interface and Experience**

- ROI of UX design
- Role and mindset of UX design in IT projects
- The UX design process
- UX psychology: How the human mind works
- User research
- UX design basics

Project: Human Computer Interaction

In this course the students will gain practical experience in user experience design. They will conduct user testing for a given user interface and work on developing improvements. The work process and the results will become part of a portfolio.

Learning Outcomes**User Interface and Experience**

On successful completion, students will be able to

- Understand what design is about and the crucial aspects of good design
- understand and define the role of the UI/UX designer within a project.
- explain the UX design process and the user-centered mindset.
- advocate the importance of UX design for IT projects.
- describe the basic methods of user research, user testing, and user-centered design.

Project: Human Computer Interaction

On successful completion, students will be able to

- evaluate the usability of a user interface.
- conduct user testing.
- understand the practical implications of putting users first.
- make small changes in existing user interfaces and recognize the situations in which a user experience designer should be consulted.

User Interface and Experience

Course Code: DLMAIEUIUX01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	none

Course Description

UX design is crucial to the development of new IT services and applications and enhances the quality of the outcome. Applying UX design techniques can significantly and positively change the software development process, and good UX design is the result of effective teamwork. Within this course the students will understand the mindset, basic techniques, and impact of UX design on IT projects. They will learn how the UX design process works and the role of the UX designer within IT projects. They will also gain skills in the type of collaboration that produces the best results. Using their basic knowledge about good design, the students will know when it is appropriate that they make small changes to UIs themselves and when it is time to consult a designer.

Course Outcomes

On successful completion, students will be able to

- Understand what design is about and the crucial aspects of good design
- understand and define the role of the UI/UX designer within a project.
- explain the UX design process and the user-centered mindset.
- advocate the importance of UX design for IT projects.
- describe the basic methods of user research, user testing, and user-centered design.

Contents

1. ROI of UX design
 - 1.1 Efficacy
 - 1.2 Efficiency
 - 1.3 The impact of design on use errors
2. Role and Mindset of UX design in IT projects
 - 2.1 The role of UX design: the UX designer
 - 2.2 The UX mindset: putting the user first
3. The UX design Process
 - 3.1 In a waterfall process environment
 - 3.2 In an agile process environment

4. UX Psychology: How the Human Mind Works
 - 4.1 Perceptual psychology
 - 4.2 Information processing
 - 4.3 Decision-making
 - 4.4 Situation awareness
 - 4.5 Errors
5. User Research
 - 5.1 The benefit of user research
 - 5.2 Basic research techniques
 - 5.3 User testing
6. UX design Basics
 - 6.1 Interaction design
 - 6.2 Information architecture
 - 6.3 Screen design
 - 6.4 Graphic design
 - 6.5 Rules of good design

Project: Human Computer Interaction

Course Code: DLMAIEUIUX02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		5	DLMAIEUIUX01

Course Description

In this course the students will gain practical experience in user experience design. They will set up and conduct a user testing for a given user interface and develop improvements. The work process and the results will become part of a portfolio.

Course Outcomes

On successful completion, students will be able to

- evaluate the usability of a user interface.
- conduct user testing.
- understand the practical implications of putting users first.
- make small changes in existing user interfaces and recognize the situations in which a user experience designer should be consulted.

Contents

- User experience design focusses on the needs of users. Within this portfolio project the students put into practice basic techniques which lead to good user-centered design. They learn how to test the user experience and usability of an application by conducting user tests, and they also learn how to develop and test ideas for improvement. Students will finish this course having gained practical experience working within the mindset of putting users first.

Module Contents**Master Thesis**

- Master's thesis

Colloquium

- Colloquium on the Master's thesis

Learning Outcomes**Master Thesis**

On successful completion, students will be able to

- work on a problem from their major field of study by applying the specialist and methodological skills they have acquired during their studies.
- analyse selected tasks with scientific methods, critically evaluate them and develop appropriate solutions under the guidance of an academic supervisor.
- record and analyse existing (research) literature appropriate to the topic of the Master's thesis.
- prepare a detailed written elaboration in compliance with scientific methods.

Colloquium

On successful completion, students will be able to

- present a problem from their field of study under consideration of academic presentation and communication techniques.
- reflect on the scientific and methodological approach chosen in the Master's thesis.
- actively answer subject-related questions from subject experts (experts of the Master's thesis).

Master Thesis

Course Code: MMTHE01

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		27	none

Course Description

The aim and purpose of the Master's thesis is to successfully apply the subject-specific and methodological competencies acquired during the course of study in the form of an academic dissertation with a thematic reference to the major field of study. The content of the Master's thesis can be a practical-empirical or theoretical-scientific problem. Students should prove that they can independently analyse a selected problem with scientific methods, critically evaluate it and work out proposed solutions under the subject-methodological guidance of an academic supervisor. The topic to be chosen by the student from the respective field of study should not only prove the acquired scientific competences, but should also deepen and round off the academic knowledge of the student in order to optimally align his professional abilities and skills with the needs of the future field of activity.

Course Outcomes

On successful completion, students will be able to

- work on a problem from their major field of study by applying the specialist and methodological skills they have acquired during their studies.
- analyse selected tasks with scientific methods, critically evaluate them and develop appropriate solutions under the guidance of an academic supervisor.
- record and analyse existing (research) literature appropriate to the topic of the Master's thesis.
- prepare a detailed written elaboration in compliance with scientific methods.

Contents

- Within the framework of the Master's thesis, the problem as well as the scientific research goal must be clearly emphasized. The work must reflect the current state of knowledge of the topic to be examined by means of an appropriate literature analysis. The student must prove his ability to use the acquired knowledge theoretically and/or empirically in the form of an independent and problem-solution-oriented application.

Colloquium

Course Code: MMTHE02

Study Level	Language of Instruction	Contact Hours	CP	Admission Requirements
MA	English		3	none

Course Description

The colloquium will take place after submission of the Master's thesis. This is done at the invitation of the experts. During the colloquium, the students must prove that they have fully independently produced the content and results of the written work. The content of the colloquium is a presentation of the most important work contents and research results by the student, and the answering of questions by the experts.

Course Outcomes

On successful completion, students will be able to

- present a problem from their field of study under consideration of academic presentation and communication techniques.
- reflect on the scientific and methodological approach chosen in the Master's thesis.
- actively answer subject-related questions from subject experts (experts of the Master's thesis).

Contents

- The colloquium includes a presentation of the most important results of the Master's thesis, followed by the student answering the reviewers' technical questions.
