Bachelor of Science

Bachelor Data Science (FS-FI-BADSC)

180 CP

Distance Learning

As of April 23rd, 2024

Classification: Undergraduate

Contents

1. Semester

Module DLBDSIDS: Introduction to Data Science

Module Description	11
Course DLBDSIDS01: Introduction to Data Science	13

Module DLBCSIAW: Introduction to Academic Work

Module Description	16
Course DLBCSIAW01: Introduction to Academic Work	18

Module DLBDSIPWP: Introduction to Programming with Python

Module Description	23
Course DLBDSIPWP01: Introduction to Programming with Python	25

Module DLBDSMFC: Mathematics: Analysis

Module Description	30
Course DLBDSMFC01: Mathematics: Analysis	32

Module DLBCSCW: Collaborative Work

Module Description	36
Course DLBCSCW01: Collaborative Work	38

Module DLBDSSPDS-01: Statistics: Probability and Descriptive Statistics

Module Description	44
Course DLBDSSPDS01-01: Statistics: Probability and Descriptive Statistics	46

2. Semester

Module DLBDSOOFPP: Object Oriented and Functional Programming with Python

Module Description	51
Course DLBDSOOFPP01: Object Oriented and Functional Programming in Python	53

Module DLBDSMFLA: Mathematics: Linear Algebra

Module Description	57
Course DLBDSMFLA01: Mathematics: Linear Algebra	59

Module DLBCSIDM: Intercultural and Ethical Decision-Making

Module Description	63
Course DLBCSIDM01: Intercultural and Ethical Decision-Making	65

Module DLBDSSIS: Statistics - Inferential Statistics

Module Description	70
Course DLBDSSIS01: Statistics - Inferential Statistics	72

Module DLBCSDMDS: Database Modeling and Database Systems

Module Description	76
Course DLBCSDMDS01: Database Modeling and Database Systems	78

Module DLBDSPBDM: Project: Build a Data Mart in SQL

Module Description	83
Course DLBDSPBDM01: Project: Build a Data Mart in SQL	85

3. Semester**Module DLBCSEBI1: Business Intelligence**

Module Description	90
Course DLBCSEBI01: Business Intelligence	92

Module DLBCSEBI2: Project: Business Intelligence

Module Description	95
Course DLBCSEBI02: Project: Business Intelligence	97

Module DLBDSMLSL: Machine Learning - Supervised Learning

Module Description	99
Course DLBDSMLSL01: Machine Learning - Supervised Learning	101

Module DLBDSMLUSL: Machine Learning - Unsupervised Learning and Feature Engineering

Module Description	105
Course DLBDSMLUSL01: Machine Learning - Unsupervised Learning and Feature Engineering	107

Module DLBDSDSSE: Data Science Software Engineering

Module Description	111
Course DLBDSDSSE01: Data Science Software Engineering	113

Module DLBDSMTP: Project: From Model to Production

Module Description	118
Course DLBDSMTP01: Project: From Model to Production	120

4. Semester**Module DLBCSAPM: Agile Project Management**

Module Description	125
Course DLBCSAPM01: Agile Project Management	127

Module DLBDSBDT: Big Data Technologies

Module Description	131
Course DLBDSBDT01: Big Data Technologies	133

Module DLBDSQDW: Data Quality and Data Wrangling

Module Description	136
Course DLBDSQDW01: Data Quality and Data Wrangling	138

Module DLBSEDAV: Explorative Data Analysis and Visualization

Module Description	141
Course DLBSEDAV01: Explorative Data Analysis and Visualization	143

Module DLBDSCC: Cloud Computing

Module Description	146
Course DLBDSCC01: Cloud Computing	148

Module DLBDSSECDs: Seminar: Ethical Considerations in Data Science

Module Description	152
Course DLBDSSECDs01: Seminar: Ethical Considerations in Data Science	154

5. Semester**Module DLBDSTSA: Time Series Analysis**

Module Description	159
Course DLBDSTSA01: Time Series Analysis	161

Module DLBDSNNDL: Neural Nets and Deep Learning

Module Description	164
Course DLBDSNNDL01: Neural Nets and Deep Learning	166

Module DLBSEDE: Data Engineer

Module Description	170
Course DLBSEDE01: Data Engineering	172
Course DLBSEDE02: Project: Data Engineering	177

Module DLBSEDA: Data Analyst

Module Description	181
Course DLBSEDA01: Advanced Data Analysis	183
Course DLBSEDA02: Project: Data Analysis	187

Module DLBSEAIS: AI Specialist

Module Description	191
Course DLBSEAIS01: Artificial Intelligence	193
Course DLBSEAIS02: Project: Artificial Intelligence	198

Module LIBFBBAEFT: FinTech

Module Description	202
Course LIBFBBAEFT01: Crypto and Blockchain	204
Course LIBFBBAEFT02: FinTech	207

Module DLBDSEIMB: International Marketing and Branding

Module Description	211
Course DLBDSEIMB01: International Marketing	214
Course DLBDSEIMB02: International Brand Management	219

Module DLBDSEAS: Applied Sales

Module Description	224
Course DLBDSEAS01: Applied Sales I	227
Course DLBDSEAS02: Applied Sales II	231

Module DLBDSESCM: Supply Chain Management

Module Description	235
Course DLBDSESCM01: Supply Chain Management I	238
Course DLBDSESCM02: Supply Chain Management II	242

Module DLBDSEMECFI: Managerial Economics and Corporate Finance and Investment

Module Description	246
Course DLBBWME01_E: Managerial Economics	249
Course DLBCFIE01: Corporate Finance and Investment	255

Module DLBDSESF: Smart Factory

Module Description	260
Course DLBDSESF01: Smart Factory I	263
Course DLBDSESF02: Smart Factory II	268

Module DLBDSEAR: Production Engineering, Automation and Robotics

Module Description	272
Course DLBDSEAR01: Production Engineering Industry 4.0	275
Course DLBDSEAR02: Automation and Robotics	280

Module DLBDSEAD: Autonomous Driving

Module Description	284
Course DLBDSEAD01: Self-Driving Vehicles	286
Course DLBDSEAD02: Seminar: Current Topics and Trends in Self-Driving Technology	290

Module LIBFBBAEFFB: Fundamentals of Finance and Banking

Module Description	294
Course LIBFBBAEFFB01: Introduction to Financial Services Sector	296
Course LIBFBBAEFFB02: Introduction to Banking Law, Regulation and Ethics	299

6. Semester

Module DLBDSEDE: Data Engineer

Module Description	303
Course DLBDSEDE01: Data Engineering	305
Course DLBDSEDE02: Project: Data Engineering	310

Module DLBDSEDA: Data Analyst

Module Description	314
Course DLBDSEDA01: Advanced Data Analysis	316
Course DLBDSEDA02: Project: Data Analysis	320

Module Contents

- Introduction to data science
- Data
- Data science in business
- Statistics
- Machine learning

Learning Outcomes

Introduction to Data Science

On successful completion, students will be able to

- define data science and its relation to other fields.
- comprehend data science activities.
- recognize the origins of data and the challenges of working with data.
- understand how data science methods are integrated into business settings.
- grasp fundamental statistical concepts.
- appreciate the importance of machine learning in data science.

Introduction to Data Science

Course Code: DLBDSIDS01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Data science emerged as a multi-disciplinary field aimed at creating value from data. This course starts with an overview of data science and related fields and then defines data types and sources. Special focus is put on the assessment of data quality and electronic data processing. Use of data-driven methods has become vital for businesses, and this course outlines how data-driven approaches can be integrated within a business context and how operational decisions can be made using data-driven methods. Finally, this course highlights the importance of statistics and machine learning in the field of data science and gives an overview of relevant methods and approaches.

Course Outcomes

On successful completion, students will be able to

- define data science and its relation to other fields.
- comprehend data science activities.
- recognize the origins of data and the challenges of working with data.
- understand how data science methods are integrated into business settings.
- grasp fundamental statistical concepts.
- appreciate the importance of machine learning in data science.

Contents

1. Introduction to Data Science
 - 1.1 Definition of the term „data science“
 - 1.2 Data science and related fields
 - 1.3 Data science activities
2. Data
 - 2.1 Data types and data sources
 - 2.2 The 5Vs of data
 - 2.3 Data curation and data quality
 - 2.4 Data engineering
3. Data Science in Business
 - 3.1 Identification of use cases

- 3.2 Performance evaluation
- 3.3 Data-driven operational decisions
- 3.4 Cognitive biases
4. Statistics
 - 4.1 Importance of statistics for data science
 - 4.2 Important statistical concepts
5. Machine Learning
 - 5.1 Role of machine learning in data science
 - 5.2 Overview of machine learning approaches

- Application of Good Scientific Practice
- Methodology
- Librarianship: Structure, Use, and Literature Management
- Forms of Scientific Work at IU

Learning Outcomes

Introduction to Academic Work

On successful completion, students will be able to

- understand and apply formal criteria of a scientific work.
- distinguish basic research methods and identify criteria of good scientific practice.
- describe central scientific theoretical basics and research paradigms and their effects on scientific research results.
- use literature databases, literature administration programs, and other library structures properly; avoid plagiarism; and apply citation styles correctly.
- apply the evidence criteria to scientific texts.
- define a research topic and derive a structure for scientific texts.
- compile a list of literature, illustrations, tables, and abbreviations for scientific texts.
- understand and distinguish between the different forms of scientific work at IU.

Introduction to Academic Work

Course Code: DLBCSIAW01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The application of good scientific practice is one of the basic academic qualifications that should be acquired while studying. This course deals with the distinction between everyday knowledge and science. This requires a deeper understanding of the theory of science, as well as the knowledge of basic research methods and instruments for writing scientific texts. The students therefore gain initial insight into academic research and are introduced to the basic knowledge that will help them in the future to produce scientific papers. In addition, the students receive an overview of the different IU examination forms and insight into their requirements and implementation.

Course Outcomes

On successful completion, students will be able to

- understand and apply formal criteria of a scientific work.
- distinguish basic research methods and identify criteria of good scientific practice.
- describe central scientific theoretical basics and research paradigms and their effects on scientific research results.
- use literature databases, literature administration programs, and other library structures properly; avoid plagiarism; and apply citation styles correctly.
- apply the evidence criteria to scientific texts.
- define a research topic and derive a structure for scientific texts.
- compile a list of literature, illustrations, tables, and abbreviations for scientific texts.
- understand and distinguish between the different forms of scientific work at IU.

Contents

1. Theory of Science
 - 1.1 Introduction to Science and Research
 - 1.2 Research Paradigms
 - 1.3 Fundamental Research Decisions
 - 1.4 Effects of Scientific Paradigms on Research Design
2. Application of Good Scientific Practice
 - 2.1 Research Ethics
 - 2.2 Evidence Teaching

- 2.3 Data Protection and Affidavit
- 2.4 Orthography and Shape
- 2.5 Identification and Delimitation of Topics
- 2.6 Research Questions and Structure
3. Research Methods
 - 3.1 Empirical Research
 - 3.2 Literature and Reviews
 - 3.3 Quantitative Data Collection
 - 3.4 Qualitative Data Collection
 - 3.5 Mix of Methods
 - 3.6 Critique of Methods and Self-Reflection
4. Librarianship: Structure, Use, and Literature Management
 - 4.1 Plagiarism Prevention
 - 4.2 Database Search
 - 4.3 Literature Administration
 - 4.4 Citation and Author Guidelines
 - 4.5 Bibliography
5. Scientific Work at the IU – Research Essay
6. Scientific Work at the IU - Project Report
7. Scientific Work at the IU - Case Study
8. Scientific Work at the IU - Bachelor Thesis
9. Scientific Work at the IU – Oral Assignment
10. Scientific Work at the IU – Oral Project Report
11. Scientific Work at the IU - Colloquium
12. Scientific Work at the IU - Portfolio
13. Scientific Work at the IU - Exam

Module Contents

- Python as a programming language for data science
- Variables and built-in datatypes
- Statements and functions
- Error and exception handling
- Important Python data science modules

Learning Outcomes**Introduction to Programming with Python**

On successful completion, students will be able to

- use fundamental Python syntax.
- recollect common elementary data types.
- recognize foundational programming concepts and their realization in Python.
- understand error handling and logging.
- create working programs.
- list the most important libraries and packages for data science.

Introduction to Programming with Python

Course Code: DLBDSIPWP01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course provides students with a foundational understanding of the Python programming language. Following an introductory exposition to the importance of Python for data science-related programming tasks, students will be acquainted with fundamental programming concepts like variables, data types, and statements. Building on this basis, the important notion of a function is explained and errors, exception handling, and logging are explicated. The course concludes with an overview of the most widely-used library packages for data science.

Course Outcomes

On successful completion, students will be able to

- use fundamental Python syntax.
- recollect common elementary data types.
- recognize foundational programming concepts and their realization in Python.
- understand error handling and logging.
- create working programs.
- list the most important libraries and packages for data science.

Contents

1. Introduction
 - 1.1 Why Python?
 - 1.2 Obtaining and installing Python
 - 1.3 The Python interpreter , IPython, and Jupyter
2. Variables and Data Types
 - 2.1 Variables and value assignment
 - 2.2 Numbers
 - 2.3 Strings
 - 2.4 Collections
 - 2.5 Files
3. Statements
 - 3.1 Assignment, expressions, and print

- 3.2 Conditional statements
- 3.3 Loops
- 3.4 Iterators and comprehensions
- 4. Functions
 - 4.1 Function declaration
 - 4.2 Scope
 - 4.3 Arguments
- 5. Errors and Exceptions
 - 5.1 Errors
 - 5.2 Exception handling
 - 5.3 Logs
- 6. Modules and Packages
 - 6.1 Usage
 - 6.2 Namespaces
 - 6.3 Documentation
 - 6.4 Popular data science packages

Module Contents

- Sequences and series
- Functions & reverse functions
- differential calculus
- integral calculus

Learning Outcomes**Mathematics: Analysis**

On successful completion, students will be able to

- summarize the basic concepts of analysis.
- illustrate the terms "consequences" and "series".
- explain the concept of function and to understand the concept of the inverse function.
- explain basic statements of the differential and integral calculus.
- explain the relationship between differentiation and integration.
- master the derivation of higher-dimensional functions.

Course Description

Analysis is one of the essential basic subjects of mathematics. Originally developed to be able to formulate and solve problems of classical mechanics mathematically, in its present rigorous form it has become indispensable in numerous applications in the natural sciences and technology. This module aims to introduce the basic hand tool of differential and integral calculus and to explain their mutual interrelations. In addition, the differential calculus is generalized to multidimensional spaces.

Course Outcomes

On successful completion, students will be able to

- summarize the basic concepts of analysis.
- illustrate the terms "consequences" and "series".
- explain the concept of function and to understand the concept of the inverse function.
- explain basic statements of the differential and integral calculus.
- explain the relationship between differentiation and integration.
- master the derivation of higher-dimensional functions.

Contents

1. Sequences and series
 - 1.1 Sequences and series
 - 1.2 Convergence of infinite series
 - 1.3 power series
2. Functions and reverse functions
 - 2.1 Continuous functions
 - 2.2 Exponential and logarithm function
 - 2.3 Trigonometric functions and their inverse functions
3. Differential calculus
 - 3.1 Derivatives and higher derivatives
 - 3.2 curve discussion
 - 3.3 Rules (chain rule, product rule, quotient rule ...)

3.4 Taylor Rows

4. Integral calculus

4.1 The Riemann Integral

4.2 Specific and indefinite integrals

4.3 The fundamental theorem of differential and integral calculus

4.4 Volumes and shells of rotary bodies

4.5 Paths and lengths

5. Differential calculus in the R^n

5.1 Partial Derivation

5.2 Total Derivation

5.3 Gradients of vector-valued functions and matrices

Collaborative Work

Course Code: DLBCSCW01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The course supports the students in building up and expanding important interdisciplinary competences for our networked world, and in doing so, students can take advantage of the opportunities for constructive cooperation with others. It presents essential forms and design possibilities of collaborative learning and working, imparts basic knowledge and tools for self-managed, flexible, and creative thinking, learning and acting and familiarizes students with the topics of empathy and emotional intelligence. Students are also encouraged to use the course contents. In this way, they promote their autonomous competence to act and their competence in the interactive application of tools and in interacting in heterogeneous groups.

Course Outcomes

On successful completion, students will be able to

- design their own learning processes both self-directed and collaborative with analog and digital media.
- initiate face-to-face and virtual cooperation and select suitable methods for shaping collaboration even in an intercultural context and across disciplinary boundaries.
- assess different forms of communication in relation to the goals and requirements of different situations and to reflect on their own communication and argumentation behavior in order to be able to shape conducive collaboration also in an interdisciplinary context.
- recognize social diversity including cultural and professional differences as a value, and to name and apply tools to deal with them constructively.
- explain conflict potentials and the role of emotions in conflicts and to describe the use of systemic methods in the target- and solution-oriented handling of conflicts.
- analyze one's own resources, present methods of self-leadership and self-motivation, and derive appropriate strategies.

Contents

1. Learning for a Networked World, in a Networked World
 - 1.1 Requirements and Opportunities in the "VUCA" World
 - 1.2 Learning, Knowing and Not-Knowing
 - 1.3 The 4C Model: Collective, Collaborative, Continuous, and Connected
 - 1.4 Monitoring Learning Behaviour

2. Networking & Cooperation
 - 2.1 Cooperation Partners
 - 2.2 Sustainable Relationships: Digital Interaction and Trust Building
 - 2.3 Organizing Collaboration
 - 2.4 Social Learning
3. Performance in (Online) Teams
 - 3.1 Goals, Roles, Organization and Performance Measurement
 - 3.2 Team Building and Team Flow
 - 3.3 Agile Project Management with Scrum
 - 3.4 Other Agile Methods
4. Communicating and Convincing
 - 4.1 Communication as Social Interaction
 - 4.2 Language, Images, Metaphors, and Stories
 - 4.3 Attitude: Open, Empathetic, and Appreciative Communication
 - 4.4 Active Listening
 - 4.5 Analyze Your Conversational and Argumentative Skills
5. Recognizing Conflict Potential — Managing Conflicts — Negotiating Effectively
 - 5.1 Respecting Diversity and Seizing Opportunities
 - 5.2 Empathy
 - 5.3 Systemic Solution Process Work
 - 5.4 Constructive Negotiation
6. Achieving Your Goals
 - 6.1 Effective Goal Setting
 - 6.2 The Agile Use of Time
 - 6.3 (Self-)Coaching Methods
 - 6.4 Self-Management and Motivation Strategies
7. Mobilizing Resources
 - 7.1 Recognizing Resources
 - 7.2 Reflection and Innovation
 - 7.3 Transfer Strength and Willpower

Statistics: Probability and Descriptive Statistics

Course Code: DLBDSSPDS01-01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Statistical description and analysis are the foundations for data-driven analysis and prediction methods. This course introduces the fundamentals, beginning with a formal definition of probabilities and introduction to the concepts underlying Bayesian statistics. Random variables and probability density distributions are then discussed, as well as the concept of joint and marginal distributions. The importance of various discrete and continuous distributions and their applications is stressed. Characterizing distributions is an important aspect of describing the behavior of probability distributions. Students are familiarized with expectation values, variance, and covariance. The concepts of algebraic and central moments and moment-generating functions complement the characterization of probability distributions. Finally, this course focuses on important inequalities and limit theorems such as the law of large numbers or the central limit theorem.

Course Outcomes

On successful completion, students will be able to

- define probability, random variable, and probability distribution.
- understand the concept of Bayesian statistics.
- grasp the definition of joint and marginal distributions.
- calculate expectation values and higher moments.
- comprehend important inequality equations and limit theorems.

Contents

1. Probability
 - 1.1 Definitions
 - 1.2 Independent events
 - 1.3 Conditional probability
 - 1.4 Bayesian statistics
2. Random Variables
 - 2.1 Random Variables
 - 2.2 Distribution functions and probability mass functions
 - 2.3 Important discrete probability distributions
 - 2.4 Important continuous probability distributions

3. Joint Distributions
 - 3.1 Joint distributions
 - 3.2 Marginal distributions
 - 3.3 Independent random variables
 - 3.4 Conditional distributions
4. Expectation and Variance
 - 4.1 Expectation of a random variable, conditional expectations
 - 4.2 Variance and covariance
 - 4.3 Expectations and variances of important probability distributions
 - 4.4 Algebraic and central moments
 - 4.5 Moment-generating functions
5. Inequalities and Limit Theorems
 - 5.1 Probability inequalities
 - 5.2 Inequalities for expectations
 - 5.3 The law of large numbers
 - 5.4 Central limit theorem

Module Contents

This course introduces the students to the advanced programming concepts of object orientation and functional programming and how they are realized in the Python programming language.

Learning Outcomes**Object Oriented and Functional Programming in Python**

On successful completion, students will be able to

- explain basic notions in object-oriented programming such as functions and classes.
- understand object-oriented programming concepts and their relation to software design and engineering.
- describe advanced function concepts in Python.
- recognize important ideas from functional programming.
- recall important libraries for functional programming in Python.

Object Oriented and Functional Programming in Python

Course Code: DLBDSOOFPP01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course builds upon basic knowledge of Python programming (Introduction to Programming with Python, DLBDSIPWP) and is concerned with the exposition of advanced Python programming concepts. To this end, important notions of object-oriented programming like classes and objects and pertaining design principles are outlined. Starting from an in-depth discussion of advanced features of Python functions, functional programming concepts and their implementation in Python are conveyed.

Course Outcomes

On successful completion, students will be able to

- explain basic notions in object-oriented programming such as functions and classes.
- understand object-oriented programming concepts and their relation to software design and engineering.
- describe advanced function concepts in Python.
- recognize important ideas from functional programming.
- recall important libraries for functional programming in Python.

Contents

- This course provides students with a thorough introduction to important notions and concepts from the domain of object-oriented programming such as classes, objects, abstraction, encapsulation, inheritance, polymorphism, composition, and delegation. Additionally, the functional programming paradigm and pertaining ideas like functions as first class objects, decorators, pure functions, immutability and higher order functions are conveyed. Pursuant to the portfolio course type, the aforementioned concepts and ideas are explored by hands-on programming projects.

Mathematics: Linear Algebra

Course Code: DLBDSMFLA01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Linear algebra is a fundamental subject in mathematics. Its historical origin lies in the development of solution techniques for systems of linear equations arising from geometric problems. Numerous scientific and engineering applications can be solved using its methods. This course introduces the foundations of linear algebra and its basic notions like vectors and matrices. It then builds upon this foundation by introducing the derivation of solution techniques for problems in analytical geometry.

Course Outcomes

On successful completion, students will be able to

- explain fundamental notions in the domain of linear equation systems.
- exemplify properties of vectors and vector spaces.
- summarize characteristics of linear and affine mappings.
- identify important relations in analytical geometry.
- utilize different methods for matrix decomposition.

Contents

1. Foundations
 - 1.1 Systems of Linear Equations
 - 1.2 Matrices: Basic Terms
 - 1.3 Matrix algebra
 - 1.4 Matrices as compact representations of linear equations
 - 1.5 Inverse and trace
2. Vector Spaces
 - 2.1 Definition
 - 2.2 Linear Combination and Linear Dependence
 - 2.3 Basis, Linear Envelope, and Rank
3. Linear and Affine Mapping
 - 3.1 Matrix Representation of Linear Mappings
 - 3.2 Image and Kernel

- 3.3 Affine Spaces and Subspaces
- 3.4 Affine Mapping
- 4. Analytical Geometry
 - 4.1 Norm
 - 4.2 Scalar Product
 - 4.3 Orthogonal Projections
 - 4.4 Outlook: Complex Numbers
- 5. Matrix Decomposition
 - 5.1 Determinant
 - 5.2 Eigenvalues and Eigenvectors
 - 5.3 Cholesky Decomposition
 - 5.4 Eigenvalue Decomposition and Diagonalisation
 - 5.5 Singular Value Decomposition

Intercultural and Ethical Decision-Making

Course Code: DLBCSIDM01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In this course, students acquire the necessary knowledge to understand intercultural competencies and current developments in the fields of diversity and ethics. Students will understand how to systematically plan and implement learning processes for the development of competences important in these areas. First, important terms are clarified and differentiated from each other, and cultural aspects are explained from different perspectives. In addition, students learn that cultural issues are relevant at different levels, for example, within a state, company, or other group. In this context, students also recognize the connection between ethics and culture with different interdependencies. On the basis of this knowledge, students are then familiarized with the different possibilities and potentials of intercultural and ethical learning and working. Practical cases are used to illustrate the importance of the relationships learned for today's work context in many companies. The students then work on a case study in which the acquired knowledge is systematically applied.

Course Outcomes

On successful completion, students will be able to

- explain the most important terms in the areas of interculturality, diversity, and ethics.
- distinguish different explanatory patterns of culture.
- understand culture at different levels.
- plan processes of intercultural learning and working.
- understand the interdependencies of culture and ethics.
- independently work on a case study on intercultural competence.

Contents

1. Basics of Intercultural and Ethical Competence to Act
 - 1.1 Subject Areas, Terms, and Definitions
 - 1.2 Relevance of Intercultural and Ethical Action
 - 1.3 Intercultural Action - Diversity, Globalization, Ethics
2. Cultural Concepts
 - 2.1 Hofstede's Cultural Dimensions
 - 2.2 Culture Differentiation According to Hall
 - 2.3 Locus of Control Concept to Rotter

3. Culture and Ethics
 - 3.1 Ethics - Basic Terms and Concepts
 - 3.2 Interdependence of Culture and Ethics
 - 3.3 Ethical Concepts in Different Regions of the World
4. Current Topics in the Area of Interculturality, Ethics, and Diversity
 - 4.1 Digital Ethics
 - 4.2 Equality and Equal Opportunities
 - 4.3 Social Diversity
5. Intercultural Learning and Working
 - 5.1 Acculturation
 - 5.2 Learning and Working in Intercultural Groups
 - 5.3 Strategies for Dealing with Cultural Conflicts
6. Case Studies for Cultural and Ethical Conflicts
 - 6.1 Case Study: Interculturality
 - 6.2 Case Study: Diversity
 - 6.3 Case Study: Interculturality and Ethics

Module Contents

- Point estimation
- Uncertainties
- Bayesian inference & non-parametric techniques
- Statistical testing
- Statistical decision theory

Learning Outcomes**Statistics - Inferential Statistics**

On successful completion, students will be able to

- understand point estimation methods.
- apply maximum likelihood and ordinary least squares method to estimate parameters.
- comprehend the concept of statistical and systematic errors.
- employ error propagation methods.
- utilize Bayesian inference and non-parametric techniques.
- evaluate statistical tests.
- grasp the fundamentals of statistical decision theory.

Statistics - Inferential Statistics

Course Code: DLBDSSIS01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	DLBDSSPDS01-01

Course Description

Statistical analysis and understanding are the foundations of data-driven methods and machine learning approaches. This course gives a thorough introduction to point estimators and discusses various techniques to estimate and optimize parameters. Special focus is given to a detailed discussion of both statistical and systematic uncertainties as well as propagation of uncertainties. Bayesian statistics is fundamental to data-driven approaches, and this course takes a close look at Bayesian techniques such as Bayesian parameter estimation and prior probability functions. Furthermore, this course gives an in-depth overview of statistical testing and decision theory, focusing on aspects such as A/B testing, hypothesis testing, p-values, and multiple testing which are fundamental to statistical analysis approaches in a broad range of practical applications.

Course Outcomes

On successful completion, students will be able to

- understand point estimation methods.
- apply maximum likelihood and ordinary least squares method to estimate parameters.
- comprehend the concept of statistical and systematic errors.
- employ error propagation methods.
- utilize Bayesian inference and non-parametric techniques.
- evaluate statistical tests.
- grasp the fundamentals of statistical decision theory.

Contents

1. Point Estimation
 - 1.1 Method of moments
 - 1.2 Sufficient statistics
 - 1.3 Maximum likelihood
 - 1.4 Ordinary least squares
 - 1.5 Resampling techniques
2. Uncertainties
 - 2.1 Statistical and systematic uncertainties
 - 2.2 Propagation of uncertainties

3. Bayesian Inference & Non-parametric Techniques
 - 3.1 Bayesian parameter estimation
 - 3.2 Prior probability functions
 - 3.3 Parzen windows
 - 3.4 K-nearest-neighbours
4. Statistical Testing
 - 4.1 A/B testing
 - 4.2 Hypothesis tests & test statistics
 - 4.3 P-values & confidence intervals
 - 4.4 Multiple testing
5. Statistical Decision Theory
 - 5.1 The risk function
 - 5.2 Maximum likelihood, Minimax, and Bayes
 - 5.3 Admissibility and Stein's paradox

Learning Outcomes

Database Modeling and Database Systems

On successful completion, students will be able to

- describe the basic concepts of the relational data model and distinguish them from each other.
- visually model data schemas.
- know SQL queries, read data from databases, change the data stock, and have experience in their use.
- design, create, and modify SQL queries and data schemas for SQL databases, and have experience using them.
- independently design database schemas and create database queries to solve concrete problems.
- know the most important NoSQL concepts and distinguish them from each other.

Database Modeling and Database Systems

Course Code: DLBCSDMDS01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Stored data form the basis of many value chains of an information and knowledge society. The methodical structuring of data through data schemas therefore forms an important basis for storing information in such a way that it can be retrieved and processed quickly and easily. In addition to the structured storage of data, structured access to large amounts of data must also be possible. This course teaches students how to store data in relational data models and how to access stored data with SQL. In addition to relational database systems, modern DB systems (NoSQL) for storing and accessing data will be presented.

Course Outcomes

On successful completion, students will be able to

- describe the basic concepts of the relational data model and distinguish them from each other.
- visually model data schemas.
- know SQL queries, read data from databases, change the data stock, and have experience in their use.
- design, create, and modify SQL queries and data schemas for SQL databases, and have experience using them.
- independently design database schemas and create database queries to solve concrete problems.
- know the most important NoSQL concepts and distinguish them from each other.

Contents

1. Fundamentals of Relational Databases
 - 1.1 Basic Concepts of the Relational Data Model
 - 1.2 Find and Delete Records in the Database
 - 1.3 SQL and Relational Database Systems
2. Querying Data from a Single Table
 - 2.1 Query Data (SELECT)
 - 2.2 Query Data With Condition (WHERE)
 - 2.3 Sort Query Output (ORDER BY)
 - 2.4 Queries With Group Formation (GROUP BY)

- 2.5 Subqueries With Nested SELECT Statements
- 3. Conception and Modeling of Relational Databases
 - 3.1 The Entity Relationship Model
 - 3.2 Relationships and Cardinalities in E/R Models
 - 3.3 Normal Forms of Databases
- 4. Creation of Relational Databases
 - 4.1 Logical Database Design Activities
 - 4.2 Mapping of the Conceptual Data Model into the Physical Data Model
 - 4.3 Generation of Tables in SQL Databases from E/R Diagrams
- 5. Complex Database Queries on Multiple Tables
 - 5.1 Composite Quantities (JOIN)
 - 5.2 Set Operations
 - 5.3 Data Views With CREATE VIEW
- 6. Manipulating Records in Databases
 - 6.1 Insert New Data Records (INSERT)
 - 6.2 Change Existing Records
 - 6.3 Transactions
- 7. NoSQL Database Systems
 - 7.1 Motivation and Basic Idea
 - 7.2 Selected Groups of NoSQL Systems

Module Contents

- This course is about the implementation of a practical database use case employing previously-acquired knowledge on pertaining approaches and methods.

Learning Outcomes**Project: Build a Data Mart in SQL**

On successful completion, students will be able to

- transfer previously-acquired knowledge about database methods and approaches to practical use cases.
- design, architect, and implement a working data-mart solution.
- reason about design choices of and trade-offs between relevant implementation alternatives.
- critically evaluate said choices with respect to the stated design goal.
- describe and explain the resulting solution.

Project: Build a Data Mart in SQL

Course Code: DLBDSPBDM01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course provides the opportunity to implement a realistic database use case scenario. A list of use case ideas is provided on the online learning platform. In addition, the students can contribute use case ideas of their own in accord with the tutor. The core aim is to apply the hitherto theoretical knowledge of database methods and approaches to solve a real-world application scenario. This entails reasoning about possible design and architectural choices in a rational way, as well as implementing them in a functioning database system.

Course Outcomes

On successful completion, students will be able to

- transfer previously-acquired knowledge about database methods and approaches to practical use cases.
- design, architect, and implement a working data-mart solution.
- reason about design choices of and trade-offs between relevant implementation alternatives.
- critically evaluate said choices with respect to the stated design goal.
- describe and explain the resulting solution.

Contents

- In this course, students apply their knowledge of data modeling and databases to implement a project use case of their choosing. All relevant artefacts, like use case evaluation, chosen implementation method, code, and outcomes, are documented in the form of a written project report.

Business Intelligence

Course Code: DLBCSEBI01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Business Intelligence (BI) is used to obtain information from company data that is relevant for targeted corporate management and the optimization of business activities. This course introduces and discusses techniques, procedures, and models for data provision, information generation, and analysis, as well the distribution of the information obtained. You will then be able to explain the various subject areas of data warehousing and independently select methods and techniques to meet specific requirements.

Course Outcomes

On successful completion, students will be able to

- explain the motivation, use cases, and basics of Business Intelligence.
- identify and explain techniques and methods for providing and modeling data, as well as types of data relevant to BI, differentiating between them.
- explain techniques and methods for the generation and storage of information and independently select suitable methods on the basis of concrete requirements.

Contents

1. Motivation and Conceptualization
 - 1.1 Motivation and Historical Development
 - 1.2 BI as a Framework
2. Data Provision
 - 2.1 Operative and Dispositive Systems
 - 2.2 The Data Warehouse Concept
 - 2.3 Architectural Variations
3. Data Warehouse
 - 3.1 ETL Process
 - 3.2 DWH and Data Mart
 - 3.3 ODS and Metadata
4. Modelling of Multidimensional Data Spaces

- 4.1 Data Modeling
 - 4.2 OLAP Cubes
 - 4.3 Physical Storage
 - 4.4 Star and Snowflake Scheme
 - 4.5 Historization
5. Analysis Systems
 - 5.1 Free Data Research and OLAP
 - 5.2 Reporting Systems
 - 5.3 Model-Based Analysis Systems
 - 5.4 Concept-Oriented Systems
6. Distribution and Access
 - 6.1 Information Distribution
 - 6.2 Information Access

Course Description

Using well-known methods and techniques from the field of Business Intelligence, students will work independently on a practical question in this course. At the end of the course you will be able to independently design and prototype Business Intelligence applications based on concrete requirements.

Course Outcomes

On successful completion, students will be able to

- independently design a solution to a practical problem in the field of Business Intelligence in order to then implement a prototype and document the results.
- identify and explain typical problems and challenges in the design and practical implementation of small BI solutions.

Contents

- Implementation and documentation of practical questions regarding the use of Business Intelligence applications. Typical scenarios are, for example, "Management of BI projects", "Design of multidimensional data models" and "Prototypical implementation of small BI applications".

Machine Learning - Supervised Learning

Course Code: DLBDSMLSL01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	DLBDSMFC01, DLBDSMFLA01, DLBDSPPDS01-01, DLBDSSIS01

Course Description

This course provides a first introduction to the field of machine learning with a focus on supervised learning (i.e., learning from labeled data), where the most commonly used models in regression and classification are being introduced. Moreover, the course provides an introduction to the concepts of large margin classifiers and tree structured models.

Course Outcomes

On successful completion, students will be able to

- remember central notions and paradigms of machine learning.
- describe the key ideas of regression and pertaining regularization methods.
- know basic classification techniques.
- explain tree structured machine learning models.
- understand support vector machines and the related kernel approach.

Contents

1. Introduction to Machine Learning
 - 1.1 Pattern recognition systems
 - 1.2 The machine learning design cycle
 - 1.3 Technical notions of learning and adaptation
 - 1.4 Under- and overfitting
2. Regression
 - 2.1 Linear regression
 - 2.2 Lasso- and ridge Regularization
 - 2.3 Generalized linear models
 - 2.4 Logistic regression
3. Basic Classification Techniques
 - 3.1 K-nearest neighbour
 - 3.2 Naive Bayes

4. Support Vector Machines
 - 4.1 Large margin classification
 - 4.2 The kernel trick
5. Decision & Regression Trees
 - 5.1 Decision & regression trees
 - 5.2 Random forest
 - 5.3 Gradient boosting

Module Contents

- Unsupervised machine learning
- Clustering
- Dimensionality reduction
- Manifold learning
- Feature engineering
- Feature selection
- Automation of feature generation and selection

Learning Outcomes**Machine Learning - Unsupervised Learning and Feature Engineering**

On successful completion, students will be able to

- explain the notions of unsupervised learning and feature selection.
- recall commonly-applied clustering models.
- understand the concept and utility of dimensionality reduction and manifold learning.
- describe effective approaches to feature engineering.
- discuss the methods of automatic feature generation and selection.
- reflect on societal and sustainability implications of applying the learned skills to different use cases including ethical questions.

Machine Learning - Unsupervised Learning and Feature Engineering

Course Code: DLBDSMLUSL01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	DLBDSMFC01, DLBDSMFLA01, DLBDSSPDS01-01, DLBDSSIS01

Course Description

This course is concerned with the tools and techniques for unsupervised learning and feature engineering. Unsupervised learning denotes machine learning approaches that can be applied without label information. As such, the aim is to extract patterns or statistical regularities in data, and finding good features is key for the successful application of machine learning models. Therefore, having a solid set of approaches and tools for this task is of crucial importance for any data scientist. This course introduces the most relevant methods and shows how unsupervised learning techniques can be utilized to find robust and meaningful features. By doing so, concepts and techniques are demonstrated by tangible examples which reflect usage of these techniques to generate added value for the society as a whole as opposed to ethical questionable use cases.

Course Outcomes

On successful completion, students will be able to

- explain the notions of unsupervised learning and feature selection.
- recall commonly-applied clustering models.
- understand the concept and utility of dimensionality reduction and manifold learning.
- describe effective approaches to feature engineering.
- discuss the methods of automatic feature generation and selection.
- reflect on societal and sustainability implications of applying the learned skills to different use cases including ethical questions.

Contents

1. Introduction to Unsupervised Machine Learning and Feature Engineering
 - 1.1 Unsupervised machine learning
 - 1.2 Feature engineering
2. Clustering
 - 2.1 K-Means
 - 2.2 Gaussian mixture model clustering
 - 2.3 Hierarchical clustering

3. Dimensionality Reduction
 - 3.1 Principal component analysis
 - 3.2 Multi-dimensional scaling
 - 3.3 Locally linear embedding
4. Feature Engineering
 - 4.1 Numerical features
 - 4.2 Categorical features
 - 4.3 Text features
5. Feature Selection
 - 5.1 Feature importance
 - 5.2 Feature variance
 - 5.3 Correlation matrix
 - 5.4 Recursive feature selection
6. Automated Feature Generation
 - 6.1 Automated feature generation
 - 6.2 Feature engineering versus deep learning

Data Science Software Engineering

Course Code: DLBDSSE01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	DLBDSIPWP01 or DLBDSIPWP01_D; DLBDSOOFPP01 or IOBP01

Course Description

A core part of data science is creating value from data. This means not only the creation of sophisticated predictive models but also the development of these models according to modern software development principles. This course gives a detailed overview of the relevant methods and paradigms which data scientists need to know in order to develop enterprise-grade models. This course discusses traditional and agile project management techniques, highlighting both the Kanban and Scrum approaches. It explores relevant software development paradigms such as test-driven development, pair programming, mob programming, and extreme programming. Special focus is given to the topic of testing and the consideration of how to bring a model into a production environment.

Course Outcomes

On successful completion, students will be able to

- understand the concept of project management approaches.
- apply agile approaches in software development.
- create automated software tests.
- understand various software development paradigms.
- evaluate the necessary steps to bring models into a production environment.

Contents

1. Traditional Project Management
 - 1.1 Requirements engineering
 - 1.2 Waterfall model
 - 1.3 Rational unified process
2. Agile Project Management
 - 2.1 Criticism of the waterfall model
 - 2.2 Introduction to SCRUM
 - 2.3 Introduction to Kanban
3. Testing
 - 3.1 Why testing?

- 3.2 Unit tests
- 3.3 Integration tests
- 3.4 Performance monitoring
4. Software Development Paradigms
 - 4.1 Test-driven development (TDD)
 - 4.2 Pair programming
 - 4.3 Mob programming
 - 4.4 Extreme programming
5. From Model to Production
 - 5.1 Continuous delivery
 - 5.2 Continuous integration
 - 5.3 Building a scalable environment

Module Contents

This course focuses on creating a setup which allows the integration of a predictive model into an enterprise-grade application or service.

Learning Outcomes**Project: From Model to Production**

On successful completion, students will be able to

- understand the challenges of integrating a predictive model into an application or service.
- evaluate the constraints a project imposes on the execution of a predictive model.
- analyze the requirements regarding data acquisition, storage, and processing.
- identify the necessary monitoring components required for reliable execution of the predictive model.
- create and design a production environment for storing, accessing, and serving the predictive model.

Project: From Model to Production

Course Code: DLBDSMTP01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	DLBDSSE01, DLBDSIPWP01, DLBDSOOFPP01

Course Description

This project course will give students hands-on experience in the challenging task of bringing a predictive model into a production environment. Students will need to consider practical aspects such as data storage and processing, as well as constraints such as service availability and the maximum amount of time a model is allowed to run due to external project requirements. Through this course, students will obtain holistic overview of the integration of predictive models into enterprise-grade applications or services.

Course Outcomes

On successful completion, students will be able to

- understand the challenges of integrating a predictive model into an application or service.
- evaluate the constraints a project imposes on the execution of a predictive model.
- analyze the requirements regarding data acquisition, storage, and processing.
- identify the necessary monitoring components required for reliable execution of the predictive model.
- create and design a production environment for storing, accessing, and serving the predictive model.

Contents

- This project course focuses on practical aspects of ensuring that a predictive model can run in a production environment. The students start with a chosen use case and model and then evaluate the requirements which need to be fulfilled so that the model can be used as part of an enterprise application or app. Students need to evaluate requirements in terms of data storage, processing and throughput, and availability of the service, as well as the persistency, serving, and versioning of the model itself. Monitoring the execution of model predictions and raising alerts in cases of operational issues is a core part of building a reliable model pipeline. All relevant artifacts and considerations are documented by the students in a project report.

Module Contents

- In this course, students are taught action competences in the field of agile project management. They will be familiarized with the values, activities, roles, and artifacts of agile procedures using Scrum as an example.

Learning Outcomes**Agile Project Management**

On successful completion, students will be able to

- explain the differences between agile and plan-driven project management.
- explain agile principles.
- work together in an agile manner according to the values defined in Scrum.
- apply the activities defined in Scrum.
- take responsibility for the roles defined in Scrum.
- create and maintain the artefacts defined in Scrum.
- consider the increasing relevance of international, intercultural and virtual collaboration in projects.

Agile Project Management

Course Code: DLBCSAPM01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Students will receive a practical introduction to agile project management in this course. In addition to teaching its individual basic principles, the differences between agile project management and plan-driven project management will be examined in detail. In order to understand and experience agile project management, the values, activities, roles, and artefacts of typical agile procedures are presented using Scrum and then practiced on an example project.

Course Outcomes

On successful completion, students will be able to

- explain the differences between agile and plan-driven project management.
- explain agile principles.
- work together in an agile manner according to the values defined in Scrum.
- apply the activities defined in Scrum.
- take responsibility for the roles defined in Scrum.
- create and maintain the artefacts defined in Scrum.
- consider the increasing relevance of international, intercultural and virtual collaboration in projects.

Contents

- This course teaches students various skills in the field of agile project management. In contrast to plan-driven project management, the principles of agility used in modern software development are taught. Using the example of Scrum, students will acquire skills in applying an agile approach, and then apply their knowledge of respective roles and activities in a simple project to gain initial practical experience, documenting it in a project report. The content of the projects results from the individual abilities and requirements of the students.

Big Data Technologies

Course Code: DLBDSBDT01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	DLBCSDMDS01

Course Description

Data are often considered the “new oil”, the raw material from which value is created. To harness the power of data, the data need to be stored and processed on a technical level. This course introduces the four “Vs” of data, as well as typical data sources and types. The course discusses the most common data storage formats encountered in modern systems, focusing both on text-based as well as binary data formats. Handling large amounts of data poses significant challenges for the underlying infrastructure. The course discusses the most important distributed and streaming data handling frameworks which are used in leading edge applications.

Course Outcomes

On successful completion, students will be able to

- name types and sources of data.
- understand text-based and binary data formats.
- analyze the requirements and constraints of distributed analysis systems.
- evaluate the applications of streaming frameworks.
- describe the motivation for NoSQL data stores and categorize pertaining established concepts.

Contents

1. Data Types and Data Sources
 - 1.1 The 4Vs of data: volume, velocity, variety, veracity
 - 1.2 Data sources
 - 1.3 Data types
2. Text-Based and Binary Data Formats
 - 2.1 Simple formats: CSV, YAML
 - 2.2 XML
 - 2.3 JSON
 - 2.4 Hierarchical data format 5 (HDF 5)
 - 2.5 Apache Parquet
 - 2.6 Apache Arrow

3. NoSQL data stores
 - 3.1 Introduction and motivation
 - 3.2 Approaches and technical concepts
4. Distributed Systems
 - 4.1 Hadoop & MapReduce
 - 4.2 Hadoop file system (HDFS)
 - 4.3 Spark
 - 4.4 DASK
5. Streaming Frameworks
 - 5.1 Spark streaming
 - 5.2 Kafka

Data Quality and Data Wrangling

Course Code: DLBDSQDW01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	DLBDSIPWP01 or DLBDSIPWP01_D, DLBDSOOFPP01

Course Description

The goal of data science can be summarized as the extraction of insights (hence, value) from data. It is self-evident that this objective cannot be successfully achieved based on unreliable and untrustworthy data. This course aims at establishing the notion of data quality and the pertinent methods for data quality management. Furthermore, techniques for acquiring data as well as formatting and tidying data in order to make it suitable for subsequent analytical treatment are covered.

Course Outcomes

On successful completion, students will be able to

- discuss the fundamental aspects of data quality.
- describe common approaches to data quality management.
- use various methods to gather data from websites and other public data sources.
- work with established data formats.
- explain widely-used techniques for data preparation.

Contents

1. Data Quality
 - 1.1 Introduction to data quality
 - 1.2 Data quality dimensions and issue types
2. Data Quality Management
 - 2.1 Data governance and stewardship
 - 2.2 Activities and processes
3. Data Acquisition
 - 3.1 Web scraping
 - 3.2 Data APIs
4. Working with Common Data Formats
 - 4.1 Text-based formats (CSV, XML, JSON)

4.2 Binary formats (HDF 5, Parquet, Arrow)

5. Tidy Data

5.1 Structuring

5.2 Cleansing

5.3 Enrichment

Explorative Data Analysis and Visualization

Course Code: DLBDSEDAV01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	DLBDSIPWP01 or DLBDSIPWP01_D, DLBDSOOFPP01

Course Description

Obtaining an overview of the salient characteristics of a data set is one of the core activities at the outset of any data analysis endeavour. The corresponding activities, methods, and techniques are grouped under the term “exploratory data analysis”. During exploratory data analysis, gaining insight into a given data set is often aided by the application of suitable visualization techniques. The utility of visualization, however, does not end at this stage; it is also crucial for communicating analytical outcomes. This course first introduces a set of approaches, tools, and techniques that are useful for exploring data sets. It then takes a thorough look at the subject area of visualization, which is presented in detail by an exposition arc that spans from first principles of visualization to practical implementation to insights into the communication of data science results and findings.

Course Outcomes

On successful completion, students will be able to

- recognize foundational concepts of exploratory data analysis.
- cite principles of data visualization.
- identify well-established types of visualizations and their appropriate uses.
- describe visualization best practices.
- understand practical data visualization fundamentals in Python.
- use different approaches for effective visual communication of data science results.

Contents

1. Exploratory Data Analysis
 - 1.1 Location and variability
 - 1.2 Further exploration of data distribution
 - 1.3 Covariance and correlation
2. Data Visualization Principles
 - 2.1 Coordinates and axes
 - 2.2 Color spaces
 - 2.3 Graph types
3. Data Visualization Practice

- 3.1 Amounts, proportions, associations, and distributions
- 3.2 Time series and trends
- 3.3 Geo-spatial data
4. Visualization in Python – Matplotlib and Seaborn
 - 4.1 Introduction to PyPlot, Matplotlib, and Seaborn
 - 4.2 Basic plots
 - 4.3 Geo-spatial plots
5. Communicating Data Science
 - 5.1 Unclutter, focus, and capture attention
 - 5.2 Lessons from design
 - 5.3 Principles of storytelling with data

Cloud Computing

Course Code: DLBDSCC01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Many of the recent advances in data science, particularly machine learning and artificial intelligence, rely on comprehensive data storage and computing power. Cloud computing is one way of providing that power in a scalable way, without considerable upfront investment in hardware and software resources. This course introduces the area of cloud computing together with its enabling technologies. Moreover, the most cutting-edge advances like serverless computing and storage are illustrated. Finally, a thorough overview on popular cloud offerings, especially in regard to analytics capabilities, is given.

Course Outcomes

On successful completion, students will be able to

- understand the fundamentals of cloud computing and cloud service models.
- recognize enabling technologies that underlie current cloud offerings.
- cite the principles of serverless computing.
- analyze characteristics of established cloud offerings.
- describe cloud options for data science and machine learning

Contents

1. Introduction to Cloud Computing
 - 1.1 Fundamentals of Cloud computing
 - 1.2 Cloud Service Models
 - 1.3 Benefits and Risks
2. Enabling Technology
 - 2.1 Virtualization and Containerization
 - 2.2 Storage Technology
 - 2.3 Networks and RESTful Services
3. Serverless Computing
 - 3.1 Introduction to Serverless Computing
 - 3.2 Benefits
 - 3.3 Limitations

4. Established Cloud Platforms
 - 4.1 General Overview
 - 4.2 Google Cloud Platform
 - 4.3 Amazon Web Services
 - 4.4 Microsoft Azure
 - 4.5 Platform Comparison

5. Data Science in the Cloud
 - 5.1 Provider-independent services and tools
 - 5.2 Google Data Science and Machine Learning Services
 - 5.3 Amazon Web Services Data Science and Machine Learning Services
 - 5.4 Microsoft Azure Data Science and Machine Learning Services

Module Contents

This course aims at creating an awareness of the ethical implications of data science techniques and methodologies. To this end, students will be given the opportunity to acquaint themselves with current literature on the topic and explore the pertinent lines of thinking.

Learning Outcomes**Seminar: Ethical Considerations in Data Science**

On successful completion, students will be able to

- contemplate ethical considerations in the field of data science.
- describe how the application of data science methodology may have adverse ethical effects.
- reason about the ethical impacts of data science, both on a personal level and for society at large.
- explain how existing biases and inequalities could be amplified by technology.
- treat in a scientific manner a selected topic in the form of a written essay.

Seminar: Ethical Considerations in Data Science

Course Code: DLBDSSECD01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Online trade, social media, media delivery, mass consumption, customer relationship management, hiring decisions, and more: There are hardly any aspects of contemporary life that are not affected by the application of data science methodologies and techniques. Thus, it is of central importance to gain an awareness of these implications and a thorough understanding of the ethical issues in question in order to be an informed practitioner in this field.

Course Outcomes

On successful completion, students will be able to

- contemplate ethical considerations in the field of data science.
- describe how the application of data science methodology may have adverse ethical effects.
- reason about the ethical impacts of data science, both on a personal level and for society at large.
- explain how existing biases and inequalities could be amplified by technology.
- treat in a scientific manner a selected topic in the form of a written essay.

Contents

- This seminar covers ethical implications of the use of data science methods and techniques. Each participant is expected to write a paper on an assigned topic.

Time Series Analysis

Course Code: DLBDSTSA01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	DLBDSSPDS01-01, DLBDSSIS01

Course Description

Many types of data describe patterns of events which occur sequentially and show dependencies on previous events, e.g., the number of guests in a hospitality service or the number of products sold in a retail outlet. These data show a particular temporal structure which can include additional effects such as seasonality or dependencies on external events. This course focuses on understanding time series data. After a general introduction to the elements of time series analysis, this course discusses ARMA-based models (Box-Jenkins approach) and the alternative Holt-Winters formalism, both of which are used for time series analysis and forecasting. This course also includes a discussion about advanced topics in time series analysis such as the handling of multiple seasonalities and framing a problem statement in the context of supervised learning.

Course Outcomes

On successful completion, students will be able to

- identify the fundamental concepts of time series analysis.
- cite the components of time series.
- create simple time series models.
- analyze time series data with ARMA and Holt-Winter models.
- understand advanced topics in time series analysis.

Contents

1. Introduction to Time-Series Analysis
 - 1.1 What are time series?
 - 1.2 Auto-correlation & partial auto-correlation
2. Time-Series Components
 - 2.1 Trend
 - 2.2 Seasonality
 - 2.3 Residuals
3. Simple Models
 - 3.1 Simple average
 - 3.2 Moving average

3.3	Weighted moving average
4.	ARMA Models
4.1	Box-Jenkins formalism
4.2	Handling non-stationary models: ARIMA
4.3	Seasonal ARIMA models: SARIMA
4.4	Seasonal models with external variables: SARIMAX
5.	Holt-Winters Models
5.1	Simple exponential smoothing
5.2	Dealing with trends: double exponential smoothing
5.3	Dealing with seasonality: triple exponential smoothing
6.	Advanced topics
6.1	Multiple seasonalities
6.2	Time series forecasting as a supervised learning problem

Neural Nets and Deep Learning

Course Code: DLBDSNNDL01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	DLBDSMLS01, DLBDSMLUS01

Course Description

Neural networks and deep learning approaches have revolutionized the fields of data science and artificial intelligence in recent years, and applications built on these techniques have reached or surpassed human performance in many specialized applications. After a short review of the origins of neural networks and deep learning, this course discusses in detail how feed-forward networks are set up and trained. Special focus is given on how to avoid overtraining in neural networks. In addition to feed-forward neural networks, this course covers additional common network architectures such as convolutional and recurrent neural networks. Moreover, by means of the accompanying video material and online tutorial support the impact of design choices and the data collection process on questions of algorithmic fairness both in terms of its individual as well as its societal dimension will be discussed.

Course Outcomes

On successful completion, students will be able to

- understand the fundamental building blocks of neural networks.
- identify different network training approaches.
- create feed-forward neural networks.
- analyze network training and how to avoid overtraining.
- apply advanced network concepts to create convolutional and recurrent neural networks.
- reason about the influence of model design and data selection on model outcomes in terms of social and personal equity.

Contents

1. Introduction to Neural Networks
 - 1.1 The biological brain
 - 1.2 Building blocks of neural networks
 - 1.3 Deep versus shallow networks
 - 1.4 Supervised learning
 - 1.5 Reinforcement learning
2. Feed-forward Networks
 - 2.1 Architecture and weight initialization
 - 2.2 Cost functions

- 2.3 Backpropagation and gradient descent
- 2.4 Batch normalization
3. Overtraining Avoidance
 - 3.1 What is overtraining?
 - 3.2 Early stopping
 - 3.3 L1 and L2 regularization
 - 3.4 Dropout
 - 3.5 Weight pruning
4. Convolutional Neural Networks
 - 4.1 Motivation and applications
 - 4.2 Convolution and image filtering
 - 4.3 CNN architecture
 - 4.4 Popular convolutional networks
5. Recurrent Neural Networks
 - 5.1 Recurrent neurons
 - 5.2 Memory cells
 - 5.3 LSTMs
 - 5.4 Training RNNs: Unrolling through time

Data Engineering

Course Code: DLBDESE01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course explores concepts of data engineering. Data engineering is concerned with the infrastructure aspects of data science such as data storage and provision, as well as the provisioning of suitable operational environments. After laying out foundational notions and concepts of the discipline, this course addresses important developments in storage technology; aspects of systems architecture for processing data at scale; containerization as a modern take on virtualization; and the logic of data pipelines and associated operational aspects. Important issues pertaining to data security and protection are also given appropriate attention.

Course Outcomes

On successful completion, students will be able to

- understand important foundational concepts in data engineering.
- recognize established and commonly-employed NoSQL datastores and their salient characteristics.
- comprehend common architectural patterns for data processing at scale.
- explain the concept of containerization as a virtualization approach.
- analyze operational challenges in the set-up and maintenance of data pipelines.
- demonstrate familiarity with concepts relating to data security and protection.

Contents

1. Foundations of Data Engineering
 - 1.1 Reliability
 - 1.2 Scalability
 - 1.3 Maintainability
2. NoSQL In Depth
 - 2.1 Fundamentals of NoSQL
 - 2.2 Established NoSQL solutions
3. Architectures for Data Processing at Scale
 - 3.1 Batch processing architectures
 - 3.2 Architectures for stream and complex event processing
 - 3.3 Lambda architecture

4. Containerization In Depth
 - 4.1 Docker containers
 - 4.2 Container management
5. Governance & Security
 - 5.1 Data protection
 - 5.2 Data security
 - 5.3 Data governance
6. Operational Aspects
 - 6.1 Defining principles of DataOps
 - 6.2 Building and maintaining data pipelines
 - 6.3 Metrics and monitoring

Project: Data Engineering

Course Code: DLBDESEDE02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The focus of this course is the implementation of a real-world data engineering use case in the form of a student portfolio. To this end, students choose a project subject from the various sub-domains of data engineering. Examples include setting up a Docker container environment or dockerized service; implementing a data pipeline according to DataOps principles; and setting up an NoSQL data store. The goal is for students to demonstrate they can transfer theoretical knowledge to an implementation scenario that closely mimics practical work in a professional data engineering setting.

Course Outcomes

On successful completion, students will be able to

- formulate and implement a real-world data engineering use case.
- select appropriate resources for the task at hand.
- transfer acquired specialized knowledge in data engineering to a real-world use case.
- derive relevant design choices from the given project setting.
- analyze the suitability of different solution options with respect to the project task.
- make apposite choices with respect to implementation alternatives.

Contents

- This course covers the practical implementation of approaches and techniques covered in the preceding methodological course in a project-oriented setting. Each participant must produce a portfolio detailing and documenting the work. Portfolio themes are chosen from a list, or suggested by the students in accord with the tutor.

Module Contents**Advanced Data Analysis**

- Business performance analytics
- Text mining
- Web- and social media analytics
- Experimentation and testing

Project: Data Analysis

Transfer of methodological knowledge to the implementation of real-world analytics use cases from the above-mentioned problem domains.

Learning Outcomes**Advanced Data Analysis**

On successful completion, students will be able to

- identify important design considerations for business KPIs.
- explain various topics in business process analytics.
- utilize established techniques for web data analytics.
- understand analytical approaches to text mining and semantic analysis.
- disambiguate relevant questions in social media analytics.
- use the techniques and methods for experimentation and testing.

Project: Data Analysis

On successful completion, students will be able to

- formulate and implement a real-world analytical use case.
- analyze the suitability of different possible approaches with respect to the project task.
- transfer acquired specialized analytical knowledge to real-world use cases.
- derive relevant design choices from the given project setting.
- make apposite choices with respect to implementation alternatives.
- select appropriate resources

Advanced Data Analysis

Course Code: DLBDEDA01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course introduces several advanced analytics subjects of practical relevance. The subject areas covered span from business performance measurement and analytics, text mining, and web- and social media analytics to current trends in experimental design and setup. Along this journey topics such as the design of key performance indicators (KPIs), business process analytics, word frequency and semantic analysis, data science on clickstreams, social media interactions, and multi-armed bandit testing are addressed.

Course Outcomes

On successful completion, students will be able to

- identify important design considerations for business KPIs.
- explain various topics in business process analytics.
- utilize established techniques for web data analytics.
- understand analytical approaches to text mining and semantic analysis.
- disambiguate relevant questions in social media analytics.
- use the techniques and methods for experimentation and testing.

Contents

1. Business Performance Analytics
 - 1.1 KPI design considerations
 - 1.2 Common business performance indicators
 - 1.3 Business process mining
2. Text Analytics
 - 2.1 Word and document frequency (TF-IDF)
 - 2.2 Semantic analysis
3. Web Analytics
 - 3.1 Web metrics
 - 3.2 Clickstream analytics
 - 3.3 Recommender systems
4. Social Network Mining

- 4.1 Introduction to social media analytics
- 4.2 Mining common social media platforms
- 5. Testing and Experimentation
 - 5.1 Practical A/B testing
 - 5.2 Multivariate tests
 - 5.3 Multi-armed bandit testing

Project: Data Analysis

Course Code: DLBDSEDA02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The focus of this course is the implementation of a real-world, advanced analytics use case in the form of a student project. Primary subject areas for this practical work include business performance analytics, text mining, web- and social analytics, and experimentation and testing. The goal is for students to demonstrate they can transfer the theoretical knowledge acquired in Advanced Data Analysis (DLBDSEDA01) to an implementation scenario that closely mimics project work in a professional data science setting.

Course Outcomes

On successful completion, students will be able to

- formulate and implement a real-world analytical use case.
- analyze the suitability of different possible approaches with respect to the project task.
- transfer acquired specialized analytical knowledge to real-world use cases.
- derive relevant design choices from the given project setting.
- make apposite choices with respect to implementation alternatives.
- select appropriate resources

Contents

- This course covers the practical implementation of the approaches and techniques covered in the course Advanced Data Analysis (DLBDSEDA01) in a project-oriented setting. Each participant must produce a project report detailing and documenting their work. Project tasks are chosen from a list or suggested by the students in accord with the tutor.

Module Contents**Artificial Intelligence**

- History of AI
- Modern AI systems
- Reinforcement learning
- Natural language processing
- Computer vision

Project: Artificial Intelligence

This course focuses on developing a simple AI system for a specific application and domain. A current list of topics is located in the Learning Management System.

Learning Outcomes**Artificial Intelligence**

On successful completion, students will be able to

- chart the historical developments in artificial intelligence.
- understand the approach of contemporary AI systems.
- comprehend the concepts behind reinforcement learning.
- analyze natural language using basic NLP techniques.
- scrutinize images and their contents.

Project: Artificial Intelligence

On successful completion, students will be able to

- determine the requirements for building an artificial intelligence system.
- evaluate an application for an AI system.
- transfer theoretically-sound and practically-proven methods and tools to an application domain.
- create an AI system for a chosen application.

Artificial Intelligence

Course Code: DLBDSEAIS01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The quest for artificial intelligence (AI) has captured humanity's interest for many decades and has been an active research area since the 1960s. This course will give a detailed overview of the historical developments, successes, and set-backs in AI, as well as modern approaches in the development of artificial intelligence. This course gives an introduction to reinforcement learning, a process similar to how humans and animals experience the world: exploring the environment and inferring the best course of action. This course also covers the principles of natural language processing and computer vision, both of which are key ingredients for an artificial intelligence to be able to interact with its environment.

Course Outcomes

On successful completion, students will be able to

- chart the historical developments in artificial intelligence.
- understand the approach of contemporary AI systems.
- comprehend the concepts behind reinforcement learning.
- analyze natural language using basic NLP techniques.
- scrutinize images and their contents.

Contents

1. History of AI
 - 1.1 Historical Developments
 - 1.2 AI Winter
 - 1.3 Expert Systems
 - 1.4 Notable Advances
2. Modern AI Systems
 - 2.1 Narrow versus General AI
 - 2.2 Application Areas
3. Reinforcement Learning
 - 3.1 What is Reinforcement Learning?
 - 3.2 Markov Chains and Value Function

3.3 Time-Difference and Q Learning

4. Natural Language Processing (NLP)

4.1 Introduction to NLP and Application Areas

4.2 Basic NLP Techniques

4.3 Vectorizing Data

5. Computer Vision

5.1 Introduction to Computer Vision

5.2 Image Representation and Geometry

5.3 Feature Detection

5.4 Semantic Segmentation

Project: Artificial Intelligence

Course Code: DLBDSEAIS02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This project course will give students hands-on experience in the challenging task of designing and developing an AI system for a specific application and domain. Students will need to consider requirements and practical constraints as well as the desired output of the AI system. Following this course the students will get holistic overview of developing a specific AI-based application.

Course Outcomes

On successful completion, students will be able to

- determine the requirements for building an artificial intelligence system.
- evaluate an application for an AI system.
- transfer theoretically-sound and practically-proven methods and tools to an application domain.
- create an AI system for a chosen application.

Contents

- This project course focuses on understanding and implementing a simple AI system. Based on the course Artificial Intelligence (DLBDSEAI01), students will design and implement a simple AI system. In the first step, students will choose a specific application and domain and then use the methods from the course to analyze the requirements and outcomes before implementing their own AI application. All relevant artifacts and considerations are documented by the students in a course portfolio.

Module Contents

Crypto and Blockchain

- Money, Cryptography & Cryptocurrencies
- The Blockchain
- Crypto Assets
- Non-Fungible Tokens

FinTech

- Fintech and Fintech Disruptions
- AI & Automation
- Insurtech & Asset Management
- Regtech and the Futures of Fintech

Learning Outcomes

Crypto and Blockchain

On successful completion, students will be able to

- define money and the role of electronic money in society.
- discuss the merits of crypto assets and the risks involved in holding them.
- analyze and comment on the merits of various crypto assets.
- discuss the role of CBDCs in society now and into the future.

FinTech

On successful completion, students will be able to

- define Fintech and its place in the financial services sector.
- discuss the merits of Fintech and incumbents and how the market is changing.
- analyze and comment on the merits of various fintech offerings.
- discuss the role of AI in financial services.

Crypto and Blockchain

Course Code: LIBFBBAEFT01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Recent years have seen a proliferation in the number of crypto assets available in the market. This course considers the evolution of money from gold coins through to fiat currencies and into plastic and crypto assets considering the current state of the market and the various principal components thereof.

Course Outcomes

On successful completion, students will be able to

- define money and the role of electronic money in society.
- discuss the merits of crypto assets and the risks involved in holding them.
- analyze and comment on the merits of various crypto assets.
- discuss the role of CBDCs in society now and into the future.

Contents

1. The History of Money
 - 1.1 Gold to Coin to Paper to Plastic & Contactless
 - 1.2 The Three Features Money Has to Possess
 - 1.3 Fiat Currency, Floating and Fixed Exchange Rates
 - 1.4 The History and Developing Roles of Central Banks
2. Cryptography & Cryptocurrencies
 - 2.1 Encryption
 - 2.2 Bitcoin
 - 2.3 The Double Spend Problem
 - 2.4 The 4 Foundations of Bitcoin
 - 2.5 Mining as a Business
3. The Blockchain
 - 3.1 How a Bitcoin Transaction Works
 - 3.2 Blockchain Types
 - 3.3 What is a Block Chain?
 - 3.4 Possible Applications of Blockchain

3.5 Proof of Work and Proof of Stake

4. Crypto Assets

- 4.1 What Is a Crypto Asset?
- 4.2 Distribution of Crypto Assets
- 4.3 Initial Coin Offerings
- 4.4 ICO Versus IPO
- 4.5 Taxonomy of Crypto Assets

5. Non-Fungible Tokens

- 5.1 Fungible, Non-Fungible and Examples
- 5.2 Issuing an NFT
- 5.3 Protocols
- 5.4 Markets and Wallets
- 5.5 Recent Developments in the NFT Marketplace
- 5.6 Other Applications of NFT Technology

FinTech

Course Code: LIBFBBAEFT02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Recent years have seen huge increase in the number of technological solutions on offer to individuals and business in finance. From the challenger banks to insurance, asset management, payments and in almost every area of finance there are new offerings appearing frequently. This course covers the main sectors of financial services that are the target of Fintech companies (excluding Crypto assets). We will review the current state of the market and discuss its future direction.

Course Outcomes

On successful completion, students will be able to

- define Fintech and its place in the financial services sector.
- discuss the merits of Fintech and incumbents and how the market is changing.
- analyze and comment on the merits of various fintech offerings.
- discuss the role of AI in financial services.

Contents

1. Fintech in Context
 - 1.1 Data Speed, Processing and Memory – the History
 - 1.2 The Perfect Storm – G4, Smartphones and the Global Financial Crisis
 - 1.3 The First Online Banks
 - 1.4 The New Online Banks
 - 1.5 Fintech and the 7 Ps of Marketing
2. Fintech Disruptions
 - 2.1 Regulators and Their Sand Boxes
 - 2.2 Payments – Faster Payments and International Payments
 - 2.3 Open Banking
3. Challenger Banks
 - 3.1 Data on Challengers
 - 3.2 What is on Offer?
 - 3.3 Incumbent Responses

4. Artificial Intelligence
 - 4.1 What is Intelligence?
 - 4.2 Narrow and Broad Network Intelligence
 - 4.3 Machine Learning
 - 4.4 Neural Networks and Foundation AI
 - 4.5 AI & Automation in Fintech
5. Lending
 - 5.1 Personal Loans at Challenger Banks
 - 5.2 SME Funding via Challenger Banks
 - 5.3 Peer to Peer Lending (Curated and Direct)
 - 5.4 Online Mortgage Brokers
 - 5.5 Online Mortgages/ Equity Loans
6. Insurtech & Asset Management
 - 6.1 Insurtech vs Incumbents
 - 6.2 Products on Offer – New Developments
 - 6.3 Asset Management
 - 6.4 Bots vs People
 - 6.5 Developments in Risk Profiling
7. Regtech and the Futures of Fintech
 - 7.1 Regulatory Compliance
 - 7.2 Risk Management
 - 7.3 Financial Crime
 - 7.4 Identity Management
 - 7.5 New Developments in Fintech
 - 7.6 Product or Platform?

Module Contents**International Marketing**

- International marketing strategy
- Cultural differences and their significance for marketing
- International marketing mix (product, price, promotion, and distribution decisions in an international environment)
- International market research and consumer behavior
- Ethical aspects in international marketing
- International marketing controlling and six sigma

International Brand Management

- Basics of brand management
- Framework conditions for brands in international markets
- Strategies and concepts of international brands
- Brand architectures and brand extension options
- Brand management and communication
- Brand management according to the stakeholder concept
- Brand control and protection

Learning Outcomes**International Marketing**

On successful completion, students will be able to

- understand basic aspects of international strategic marketing.
- analyze cultural differences and their impact on international marketing.
- apply selected concepts of the international marketing mix.
- describe the possibilities of international market research and its influence on consumer behavior.
- recognize the necessity of international brand controlling and quality management.
- reproduce theoretical knowledge using case studies.

International Brand Management

On successful completion, students will be able to

- recognize the significance of a brand and the general conditions under which brands operate, as well as the associated tasks of brand management.
- describe the components of a brand and its management.
- explain the positioning of brands on regional, national and international markets.
- understand the role of brand evaluation and compare the most common measurement techniques.
- give an overview of the importance of trademark protection and suggest strategies for preventing counterfeiting.
- conceive of brand strategies and measures for the avoidance or occurrence of brand crises.

International Marketing

Course Code: DLBDSEIMB01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Students are taught the necessity for strategic marketing in an international context. They will learn about essential cultural differences and their influences on international marketing management. The basic decisions, standardizations, and adaptations in international marketing are experienced by the students on the basis of different concepts in the international marketing mix. The necessity of international market research, strategic planning, and control are taught to the students, along with the ethical aspects in international marketing. The students analyze current topics in international marketing management and reflect on them in connection with the concepts they have learned in this course.

Course Outcomes

On successful completion, students will be able to

- understand basic aspects of international strategic marketing.
- analyze cultural differences and their impact on international marketing.
- apply selected concepts of the international marketing mix.
- describe the possibilities of international market research and its influence on consumer behavior.
- recognize the necessity of international brand controlling and quality management.
- reproduce theoretical knowledge using case studies.

Contents

1. Strategic International Marketing
 - 1.1 Internationalization
 - 1.2 Theoretical Foundations of International Market Entry Strategies
 - 1.3 Forms of International Market Entry
2. Cultural Differences as an Aspect of International Marketing
 - 2.1 Overview of Culture
 - 2.2 Cultural Model Based on Hofstede
 - 2.3 Cultural Model Based on Trompenaars
3. Case Studies in International Market Entry and Marketing Strategies
 - 3.1 Case Study: Nivea in South Korea

- 3.2 Case Study: Bosch and Siemens Hausgeräte GmbH in China
 - 3.3 Case Study: Siemens Mobile in China
 - 3.4 Case Study: Siemens in China
4. International Product Management and Product Development
 - 4.1 Goals of International Product Management
 - 4.2 Framework Conditions for International Product Management
 - 4.3 International Product Decisions
 - 4.4 International Product Development
5. Exchange Rate Fluctuations and International Price Calculation
 - 5.1 Tasks and Objectives of International Price Management
 - 5.2 Factors Influencing International Price Management
 - 5.3 Instruments of International Price Management

International Brand Management

Course Code: DLBDSEIMB02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The aim of this course is to deepen and expand the knowledge acquired in the introductory elective course International Marketing. The value of a brand is a decisive competitive advantage for companies in international business. Brands create long-term and profitable customer relationships. Brands are therefore valuable assets for companies and organizations. Students learn the basics of brand management before moving on to the concepts and success factors of international brand management. Students also become familiar with the structure of brand architectures and the possibilities of brand extensions. The fact that different stakeholder groups must be taken into account in brand management is communicated to the students on the basis of the stakeholder concept. In addition, the students get to know the various methods for measuring brand value and brand controlling. The aspects of trademark protection that are particularly important in an international environment will be dealt with conclusively.

Course Outcomes

On successful completion, students will be able to

- recognize the significance of a brand and the general conditions under which brands operate, as well as the associated tasks of brand management.
- describe the components of a brand and its management.
- explain the positioning of brands on regional, national and international markets.
- understand the role of brand evaluation and compare the most common measurement techniques.
- give an overview of the importance of trademark protection and suggest strategies for preventing counterfeiting.
- conceive of brand strategies and measures for the avoidance or occurrence of brand crises.

Contents

1. Basics of Brand Management
 - 1.1 Brand Significance and Brand Understanding
 - 1.2 Market Conditions
 - 1.3 Tasks and Goals of Brand Management
2. Brand Identity, Brand Positioning, and Brand Personality
 - 2.1 Brand Identity as the Basis of Brand Management

- 2.2 Brand Positioning
 - 2.3 Brand Image
 - 2.4 Brand Personality
3. Brand Strategies
 - 3.1 The Challenges for Brand Strategies
 - 3.2 Brand Strategies for New Products
 - 3.3 Trademark Licensing
4. International Branding
 - 4.1 Importance of Branding for International Companies
 - 4.2 Brand Concepts for International Brands
 - 4.3 Factors for Successful International Brands
5. Brand Architectures and Types of Branding
 - 5.1 Brand Hierarchies
 - 5.2 Co-branding and Ingredient Branding
6. Brand Management and Communication
 - 6.1 Classic Brand Communication
 - 6.2 Brand Communication on the Internet
7. Brand Expansion
 - 7.1 Basics of Brand Extension
 - 7.2 Opportunities and Risks of Brand Extension
 - 7.3 Ideal Typical Sequence of the Brand Extension Process
8. Brand Management According to the Stakeholder Concept
 - 8.1 Basics of Brand Management According to the Stakeholder Principle
 - 8.2 Stakeholder Groups: Consumer Stakeholder Groups
 - 8.3 Stakeholder Groups: Shareholders and Financial Investors
 - 8.4 Stakeholder Groups: Employees
 - 8.5 Stakeholder Groups: Suppliers and the Public
9. Brand Control
 - 9.1 Basics of Brand Controlling
 - 9.2 Importance and Measurement of Brand Value
 - 9.3 Practical Methods for Measuring Brand Value

10. Trademark Protection

10.1 Object of Trademark Protection

10.2 Origin of Trademark Protection

10.3 Trademark Infringements

Module Contents**Applied Sales I**

- Fundamentals of Applied Sales
- The Distribution System
- Personal Sales
- Sales Plans
- New Customer Acquisition
- A Sales Visit
- Conversational Tactics
- Conducting Negotiations
- Other Sales Channels

Applied Sales II

- Marketing and Sales
- Customer Satisfaction as a Success Factor
- Personalities in Sales
- Customer-Oriented Communication
- Presentation and Rhetoric
- Customer Loyalty
- Networking
- Case Study

Learning Outcomes

Applied Sales I

On successful completion, students will be able to

- understand the fundamentals of applied sales and place them in the context of the company.
- understand the interaction of the individual facets of applied sales.
- differentiate between and evaluate individual sales systems.
- describe current sales types and sales characteristics.
- oversee and classify the entire sales process from customer acquisition to customer retention.
- understand the basics of sales and negotiation management and apply them.
- name the usual sales instruments, recognize their advantages and disadvantages, and reflect on essential fields of application and possibilities.

Applied Sales II

On successful completion, students will be able to

- understand the interaction and the respective areas of responsibility of marketing and sales.
- reflect on and classify the goals and measures within the framework of the applied sales system.
- assess the relevance of customer satisfaction and retention. In addition, the students will be familiar with the central design elements of CRM.
- reflect on and assess alternative approaches to customer loyalty and relationship management and apply them in business practice.
- understand the meaning of the terms customer life cycle and customer value, and develop approaches to manage them in the sense of the respective sales targets.
- use descriptive presentation techniques in order to convince customers and other sales partners.
- understand the relevance of networking and develop strategies to broaden the contact base.
- develop and evaluate their own market analyses and sales concepts on the basis of practical experience within the framework of the case study.

Applied Sales I

Course Code: DLBDSEAS01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The demands on sales thinking are growing every day. Globalized demand combined with high competition is making it increasingly difficult for companies to compete for customers. At the same time, customers are becoming better informed, while traditional supply markets are saturated and at overcapacity. In order to be successful in such an environment, sales thinking and action are required along with a new type of salesperson. Within the course Applied Sales I (Introduction), the participants are familiarized with the basic concepts of applied sales. You will learn about sales organization, dealing with alternative sales channels, and get to know the dedicated sales planning process. The contents of the module are complemented by the successful acquisition of new customers, whereby particular attention is paid to the organization and implementation of customer visits and the conduct of discussions and negotiations.

Course Outcomes

On successful completion, students will be able to

- understand the fundamentals of applied sales and place them in the context of the company.
- understand the interaction of the individual facets of applied sales.
- differentiate between and evaluate individual sales systems.
- describe current sales types and sales characteristics.
- oversee and classify the entire sales process from customer acquisition to customer retention.
- understand the basics of sales and negotiation management and apply them.
- name the usual sales instruments, recognize their advantages and disadvantages, and reflect on essential fields of application and possibilities.

Contents

Applied Sales II

Course Code: DLBDSEAS02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The course Applied Sales II builds on the basics taught in the course "Applied Sales I" and broadens and deepens them. First, the tension between marketing and sales is examined in more detail. Based on this, essential backgrounds and central target figures for successful sales management (e.g., customer satisfaction and loyalty as well as the customer life cycle) are derived and operationalized in order to create the basis for efficient and effective customer relationship management. As the process progresses, attention will also be paid to mental processes and consumer behavior in general. In addition, strategies and paths to successful negotiation are deepened and supplemented by convincing communication techniques. The course concludes with a case study in the course of which the students have the opportunity to apply what they have learned in a practice-oriented manner.

Course Outcomes

On successful completion, students will be able to

- understand the interaction and the respective areas of responsibility of marketing and sales.
- reflect on and classify the goals and measures within the framework of the applied sales system.
- assess the relevance of customer satisfaction and retention. In addition, the students will be familiar with the central design elements of CRM.
- reflect on and assess alternative approaches to customer loyalty and relationship management and apply them in business practice.
- understand the meaning of the terms customer life cycle and customer value, and develop approaches to manage them in the sense of the respective sales targets.
- use descriptive presentation techniques in order to convince customers and other sales partners.
- understand the relevance of networking and develop strategies to broaden the contact base.
- develop and evaluate their own market analyses and sales concepts on the basis of practical experience within the framework of the case study.

Contents

1. Marketing and Sales
 - 1.1 Marketing and Business Philosophy
 - 1.2 Sales Marketing in Different Economic Sectors
 - 1.3 Relationship Marketing

- 1.4 (International) Marketing and Sales Integration
2. Customer Satisfaction as a Success Factor
 - 2.1 Customer Relationship Management (CRM)
 - 2.2 Customer Orientation Success Chain
 - 2.3 Customer Relationship Strategies
3. Customer Retention
 - 3.1 Customer Retention Management
 - 3.2 Customer Retention Tools
 - 3.3 Complaints Management
4. Customer-Oriented Communications
 - 4.1 Communication and Sales Promotion by Sales Staff
 - 4.2 Sales Promotion by Sales Team
 - 4.3 Sales Promotion by the Company

Prof. Dr. Alex Leberling (Supply Chain Management I) / Sebastian Stütz (Supply Chain Management II)

Contributing Courses to Module

- Supply Chain Management I (DLBDESCM01)
- Supply Chain Management II (DLBDESCM02)

Module Exam Type

Module Exam

Split Exam

Supply Chain Management I

- Study Format "myStudies": Exam, 90 Minutes
- Study Format "Distance Learning": Exam, 90 Minutes

Supply Chain Management II

- Study Format "myStudies": Exam or Advanced Workbook, 90 Minutes
- Study Format "Distance Learning": Exam or Advanced Workbook, 90 Minutes

Weight of Module

see curriculum

Module Contents**Supply Chain Management I**

- Historical and terminological aspects of the SCM concept
- Motives for the creation of cross-company value creation networks
- Design principles and effects of value creation networks
- Logistical core processes and SCM
- Information technology aspects of the SCM concept
- Coordination and collaboration of the network partners
- Industry-specific solutions of the SCM

Supply Chain Management II

- Strategic aspects of SCM
- SCM Practice: Tasks and Activities in the Core Planning Process
- SCM Practice: Tasks and Activities in the Core Process of Procurement
- SCM Practice: Tasks and Activities in the Core Process Production
- SCM Practice: Tasks and Activities in the Core Distribution Process

Learning Outcomes

Supply Chain Management I

On successful completion, students will be able to

- explain the importance of cross-company value creation processes.
- understand common concepts for modeling cross-company value creation processes.
- understand dynamic effects in supply chains and can systematize their causes and effects.
- explain important theoretical concepts for describing the characteristics and challenges of cross-company value creation processes.
- explain the approaches and problem categories commonly used in the context of supply chain management.
- understand important reference and/or management models for the concretization of supply chain systems.
- name and detail important roles and tasks in the SCM network.
- deal with the coordination problem of SCM and describe the common solution approaches.

Supply Chain Management II

On successful completion, students will be able to

- systematically explain the strategic relevance of enterprise-wide value creation processes.
- understand the most important tasks and problems in the SCM core process planning.
- systematize the elements and interrelationships in the CPFR model in a differentiated way.
- be familiar with the characteristics and peculiarities of contract logistics.
- understand the most important tasks and problems in the SCM core process procurement.
- explain central elements and characteristics of a procurement strategy.
- understand the most important tasks and problems in the SCM core process production.
- explain central elements and characteristics of a modern production strategy.
- understand the most important tasks and problems in the SCM core process distribution.
- explain central elements and characteristics of the so-called ECR concept.

Supply Chain Management I

Course Code: DLBDESESCM01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

SCM proves to be an extremely multi-faceted construct from both a theoretical and a practical point of view. An adequate understanding of the problem dimensions and modes of action of (global) cross-company value creation networks requires a multidimensional approach. It starts by considering logistical processes, with modern process, flow, and network standards forming an important basis for SCM. On the basis of such an approach, students should gain a fundamental understanding of SCM. From the point of view of a holistic approach, it also makes sense to also examine a number of other typical problem areas in addition to the logistical challenges of this concept. This includes IT aspects of SCM (e.g., APS systems), and questions to do with the collaboration and coordination of network partners. This course also considers selected industry specific SCM solutions (ECR or VMI).

Course Outcomes

On successful completion, students will be able to

- explain the importance of cross-company value creation processes.
- understand common concepts for modeling cross-company value creation processes.
- understand dynamic effects in supply chains and can systematize their causes and effects.
- explain important theoretical concepts for describing the characteristics and challenges of cross-company value creation processes.
- explain the approaches and problem categories commonly used in the context of supply chain management.
- understand important reference and/or management models for the concretization of supply chain systems.
- name and detail important roles and tasks in the SCM network.
- deal with the coordination problem of SCM and describe the common solution approaches.

Contents

1. Fundamentals of the Supply Chain Concept
 - 1.1 Terminological and Conceptual Fundamentals
 - 1.2 Supply Chain Typology According to Otto
 - 1.3 Supply Chain Typology According to Bechtel/Jayaram
 - 1.4 Dynamic Aspects of Supply Chains

2. Selected Theoretical Concepts for the Supply Chain Concept
 - 2.1 New Institutional Economics
 - 2.2 Game Theory
 - 2.3 Network Approach
 - 2.4 Other Theoretical Additions
3. Supply Chain Management
 - 3.1 Basic Information on the Goals and Scope of SCM
 - 3.2 Popular Problem Areas of the SCM
 - 3.3 Supply Chain Management as an Evolutionary Step in Logistics
 - 3.4 Supply Chain Management as Cooperation Management
4. SCM Model
 - 4.1 Basic Information on the Term SCM Models
 - 4.2 SCOR Model
 - 4.3 SCM Task Model
5. SCM as a Coordination Problem
 - 5.1 Basic Information on the Concept of Coordination
 - 5.2 Coordination Concepts, Context, and Perspectives of SCM
 - 5.3 Coordination Instruments

Supply Chain Management II

Course Code: DLBDESESCM02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

From the perspective of strategic management research and practice, the activities covered by the term SCM are closely related to efforts to build and/or maintain a stable operational competitive advantage. A fundamental discussion of this relationship forms the starting point for the course. On this basis, a differentiated analysis of strategy-relevant activities and instruments in the Plan, Source, Make, Deliver, and Return process categories is then carried out using the SCOR model. Special attention is given to the practice-relevant areas of SCM, e.g., order-promising (plan), supplier-relation-management (source), postponement (make), and the ECR-concept (deliver).

Course Outcomes

On successful completion, students will be able to

- systematically explain the strategic relevance of enterprise-wide value creation processes.
- understand the most important tasks and problems in the SCM core process planning.
- systematize the elements and interrelationships in the CPFR model in a differentiated way.
- be familiar with the characteristics and peculiarities of contract logistics.
- understand the most important tasks and problems in the SCM core process procurement.
- explain central elements and characteristics of a procurement strategy.
- understand the most important tasks and problems in the SCM core process production.
- explain central elements and characteristics of a modern production strategy.
- understand the most important tasks and problems in the SCM core process distribution.
- explain central elements and characteristics of the so-called ECR concept.

Contents

1. Strategic Aspects of SCM
 - 1.1 Strategic Thinking and Action: General Information
 - 1.2 Competition Focus and SCM
 - 1.3 Competition Location and SCM
 - 1.4 Competition Rules and SCM
2. SCM Practice: Core Process Planning
 - 2.1 General Preliminary Considerations
 - 2.2 Collaborative Planning, Forecasting, and Replenishment
 - 2.3 Order Promoting

- 2.4 Kanban
- 2.5 Integration of X-PL Logistics Service Providers
- 3. SCM Practice: Core Process Procurement
 - 3.1 General Preliminary Considerations
 - 3.2 Production Synchronous Procurement
 - 3.3 Sourcing Concepts
 - 3.4 Supplier Relations Management
- 4. SCM Practice: Core Process Production
 - 4.1 Selected Aspects of the Problem Background
 - 4.2 Collaborative Engineering
 - 4.3 Postponement Strategies
 - 4.4 Value Added Partnership
- 5. SCM Practice: Core Process Distribution
 - 5.1 Basic Information on the Distribution Problem
 - 5.2 Efficient Consumer Response (ECR)
 - 5.3 Consignment Warehouse

Module Contents**Managerial Economics**

- Basics
- The Invisible Hand of the Market
- Consumer Decisions
- Business Decisions I: Full Competition
- Business Decisions II: Partial Competition
- Business Decisions III: Game Theory
- Advanced Microeconomics

Corporate Finance and Investment

- Introduction to Corporate Finance
- Ownership and Corporate Governance
- Understanding Financial Statements and Key Performance Indicators
- Basic Concepts of Financial Theory
- Types of Capital and Financing
- Short-term Financing Decisions
- Capital Budgeting and Decision-Making Methods in Investment

Learning Outcomes

Managerial Economics

On successful completion, students will be able to

- understand basic economic interrelationships and apply them to different markets.
- explain the importance of supply, demand and market balance.
- assess the determinants of consumers' willingness to pay.
- discuss the determinants of production decisions and identify peak entrepreneurial strategies.
- assess the influence of different types of markets on production and price decisions.
- analyse strategic interactions between companies.
- critically question traditional economic models on the basis of findings from information and behavioural economics.

Corporate Finance and Investment

On successful completion, students will be able to

- recognize the targets and scope of corporate finance and the role of financial markets .
- understand agency-problems in corporations and how incentives and institutional and market mechanisms are used to mitigate agency costs .
- interpret financial statements and key performance indicators and draw conclusions about financing alternatives and potentials of a corporation.
- consider the time value of money and calculate the cost of capital used to optimize future project cash flow streams.
- implement a long-term financing strategy and structure for corporations based on an appropriate mix of equity, debt, leasing, and hybrid financial instruments.
- effectively utilize cash management and working capital management to reduce short-term financing needs and costs.
- prepare investment decisions, estimate expected project cash flows and incorporate cash flow related risks into the decision process.
- apply investment decision methodologies to evaluate and select favorable corporate investment projects.

Managerial Economics

Course Code: DLBBWME01_E

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The source for (almost) all economic questions is the issue of scarcity. Building on this insight, this course considers three central elements. First, an analysis of the interplay between supply and demand on markets is made. Secondly, the course will consider the development of insights into the behaviour of consumers in markets. In a third part, the course will focus on entrepreneurial decisions that depend, among other things, on production technology available and competitive conditions in markets. These three core elements are taught from an application-oriented standpoint, in which references to (current) challenges of the management of companies are established. The course includes both the examination of economic theories and their application in business practice.

Course Outcomes

On successful completion, students will be able to

- understand basic economic interrelationships and apply them to different markets.
- explain the importance of supply, demand and market balance.
- assess the determinants of consumers' willingness to pay.
- discuss the determinants of production decisions and identify peak entrepreneurial strategies.
- assess the influence of different types of markets on production and price decisions.
- analyse strategic interactions between companies.
- critically question traditional economic models on the basis of findings from information and behavioural economics.

Contents

1. Basics
 - 1.1 Definitions & Main Topics of Economics
 - 1.2 Thinking like an Economist
2. The Invisible Hand of the Market
 - 2.1 Supply and Demand
 - 2.2 Market Balance
 - 2.3 Flexibility
 - 2.4 Applications

3. Consumer Decisions
 - 3.1 Utility Theory
 - 3.2 Willingness to Pay
 - 3.3 Demand
 - 3.4 Applications
4. Business Decisions I: Full Competition
 - 4.1 Production
 - 4.2 Costs
 - 4.3 Supply
 - 4.4 Applications
5. Business Decisions II: Partial Competition
 - 5.1 Monopoly
 - 5.2 Monopolistic Competition
 - 5.3 Oligopoly
6. Business Decisions III: Game Theory
 - 6.1 Methodology
 - 6.2 Simultaneous Games
 - 6.3 Sequential Games
7. Advanced Microeconomics
 - 7.1 Information Economics
 - 7.2 Behavioural Economics

Corporate Finance and Investment

Course Code: DLBCFIE01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course introduces students to the targets and scope of corporate finance and the role of financial markets. The separation of ownership and control is a constituent feature of corporations; students explore the resulting agency problems and the mechanisms available to mitigate the costs of agency relationships. Students will be introduced to fundamentals of theory and practice regarding principles of modern corporate finance. They will learn to read and analyze financial statements from a financing point of view and develop a detailed understanding of concepts such as the time value of money, interest rates, and cost of capital. After introducing basic concepts, equity and debt financing will be discussed at length. The financial leverage effect on rates of return will be explored and leasing and hybrid financial instruments as an alternative to pure equity and debt financing are presented. Students will study how corporations apply short-term measures of financing and how effective cash and working capital management is used to reduce short-term financing needs and costs. This course will conclude with a discussion on the investment processes of corporations with a particular focus on the challenge of estimating expected cash flows. Students will learn how to include risk as a factor in the decision process and be able to analyse applied investment rules and methodologies.

Course Outcomes

On successful completion, students will be able to

- recognize the targets and scope of corporate finance and the role of financial markets .
- understand agency-problems in corporations and how incentives and institutional and market mechanisms are used to mitigate agency costs .
- interpret financial statements and key performance indicators and draw conclusions about financing alternatives and potentials of a corporation.
- consider the time value of money and calculate the cost of capital used to optimize future project cash flow streams.
- implement a long-term financing strategy and structure for corporations based on an appropriate mix of equity, debt, leasing, and hybrid financial instruments.
- effectively utilize cash management and working capital management to reduce short-term financing needs and costs.
- prepare investment decisions, estimate expected project cash flows and incorporate cash flow related risks into the decision process.
- apply investment decision methodologies to evaluate and select favorable corporate investment projects.

Contents

1. Introduction to Corporate Finance
 - 1.1 The Targets and Scope of Corporate Finance
 - 1.2 The Role of a Financial Manager
 - 1.3 The Financial Market Environment
2. Ownership and Corporate Governance
 - 2.1 Legal Types of Firms
 - 2.2 Agency Relations and Agency Problems in Corporations
 - 2.3 Institutional Investors, Incentives, and Market Control Mechanisms
3. Understanding Financial Statements and Key Performance Indicators
 - 3.1 Balance Sheets
 - 3.2 Income Statements
 - 3.3 Cash Flow Statements
 - 3.4 Measuring Performance: Key Performance Indicators
4. Basic Concepts of Financial Theory
 - 4.1 Time Value of Money and Cash Flow Streams
 - 4.2 Interest Rates: Determinants and Quotes
 - 4.3 Estimating the Cost of Capital
5. Types of Capital and Financing
 - 5.1 Equity Capital
 - 5.2 Debt Financing
 - 5.3 Leasing
 - 5.4 Financial Leverage and Capital Structure
6. Short-Term Financing Decisions
 - 6.1 Cash Budgets and Short-Term Financial Plans
 - 6.2 Treasury and Cash Management
 - 6.3 Working Capital Management
7. Capital Budgeting and Decision-Making Methods in Investment
 - 7.1 Capital Budgeting and Investments
 - 7.2 Incorporating Risk in Capital Budgeting Decisions
 - 7.3 Investment Rules and Decision-Making Methods

Module Contents

Smart Factory I

- Motivation and Definition of Terms
- Development of Automation
- Technological Basics and Standards
- Basic concepts of a Smart Factory
- Reference Architectures
- Smart Factory Engineering
- Safety and Security

Smart Factory II

A catalogue with the currently provided tasks is provided on the online platform of the module. It provides the content basis of the module and can be supplemented or updated by the seminar leader.

Learning Outcomes

Smart Factory I

On successful completion, students will be able to

- understand the term Smart Factory in the context of Industry 4.0.
- be able to trace the development of automation to a fully autonomous, non-centrally organized production plant.
- understand the basic technologies and standards used to design and operate a Smart Factory.
- understand the essential concepts of a Smart Factory.
- identify and differentiate between the individual elements of a Smart Factory using different reference architectures.
- understand the special engineering challenges in the Smart Energy context.
- understand the special safety risks of digitized and networked production plants and assign concrete recommendations for action.

Smart Factory II

On successful completion, students will be able to

- have a deeper understanding of the technologies and standards in the context of Smart Factory.
- apply technologies in the context of Smart Factory to a simple practical example.
- design a hardware or software prototype for a selected task.
- document, design, and develop activities in the form of a project report.

Smart Factory I

Course Code: DLBDESEF01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In this course, students will gain a deeper insight into the networking and digitization of production facilities by examining a Smart Factory. For this purpose, they will be familiarized with the basic goals of a Smart Factory in the context of the research complex Industry 4.0. After a brief introduction to the history of automation, students will learn the technical basics and standards required to design and operate a Smart Factory. Building on this, they will learn how these individual technologies are used to implement the central concepts of a Smart Factory. In order to understand which components a Smart Factory consists of, different reference architectures are presented and compared. The course concludes with the special engineering challenges of an autonomously acting and decentralized production plant. Above all, this includes IT security, which is particularly relevant due to the digital networking of production facilities and products.

Course Outcomes

On successful completion, students will be able to

- understand the term Smart Factory in the context of Industry 4.0.
- be able to trace the development of automation to a fully autonomous, non-centrally organized production plant.
- understand the basic technologies and standards used to design and operate a Smart Factory.
- understand the essential concepts of a Smart Factory.
- identify and differentiate between the individual elements of a Smart Factory using different reference architectures.
- understand the special engineering challenges in the Smart Energy context.
- understand the special safety risks of digitized and networked production plants and assign concrete recommendations for action.

Contents

1. Motivation and Definition of Terms
 - 1.1 Goals of Smart Factory
 - 1.2 Internet of Things
 - 1.3 Cyber-Physical Systems
 - 1.4 Cyber-Physical Production Systems
 - 1.5 Smart Factory as a Cyber-Physical (Production) System

2. Development of Automation
 - 2.1 Automation Pyramid
 - 2.2 Networked, Decentralized Organization of Production
 - 2.3 Future Challenges
3. Technological Basics and Standards
 - 3.1 Identification of Physical Objects
 - 3.2 Formal Description Languages and Ontologies
 - 3.3 Digital Object Memory
 - 3.4 Physical Situation Recognition
 - 3.5 (Partially) Autonomous Action and Cooperation
 - 3.6 Human-Machine Interaction
 - 3.7 Machine to Machine Communication
4. Basic Concepts of a Smart Factory
 - 4.1 Order-Controlled Production
 - 4.2 Bundling of Machine and Production Data
 - 4.3 Supporting People in Production
 - 4.4 Intelligent Products and Resources
 - 4.5 Smart Services
5. Reference Architectures
 - 5.1 Purpose and Properties of Reference Architectures
 - 5.2 Overview of Standardization Initiatives
 - 5.3 CyProS Reference Architecture
 - 5.4 RAMI 4.0 (DIN SPEC 91345)
6. Smart Factory Engineering
 - 6.1 Classification of Different Engineering Tools
 - 6.2 Virtual Engineering
 - 6.3 User-Centered Design
 - 6.4 Requirements Engineering
 - 6.5 Modelling
 - 6.6 Integration of Classic and Smart Components

Smart Factory II

Course Code: DLBDESEF02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In this course, students select a concrete task from the catalog of topics provided in consultation with the seminar leader. They will work on the task in a prototyping environment suited to the task, which can be either a hardware (e.g., prototyping boards) or software (e.g., technology-specific development environments) environment. To complete the task, students apply the concepts, methods, and tools taught in the Smart Factory I course. They document their results with a project report.

Course Outcomes

On successful completion, students will be able to

- have a deeper understanding of the technologies and standards in the context of Smart Factory.
- apply technologies in the context of Smart Factory to a simple practical example.
- design a hardware or software prototype for a selected task.
- document, design, and develop activities in the form of a project report.

Contents

- A catalogue with the currently provided tasks is provided on the online platform of the module. It provides the content basis of the module and can be supplemented or updated by the seminar leader.

Module Contents**Production Engineering Industry 4.0**

- Introduction to Manufacturing Technology
- Main Production Groups According to DIN 8580
- Additive Manufacturing Processes
- Rapid Prototyping
- Rapid Tooling
- Direct/Rapid Manufacturing
- Cyber-Physical Production Plants

Automation and Robotics

- Basics of Automation
- Fundamentals of Measurement Technology
- Sensors
- Basics of Control Engineering
- Basics of Control Technology
- Introduction to Robotics
- Kinematics of a Robot

Learning Outcomes

Production Engineering Industry 4.0

On successful completion, students will be able to

- understand the basic concepts and interrelationships of production engineering.
- understand current changes in manufacturing technology due to technologies such as additive manufacturing and megatrends such as cyber physical systems.
- assign different manufacturing processes to the main manufacturing groups according to DIN 8580.
- understand the basic principle of additive manufacturing processes.
- distinguish between different additive manufacturing processes.
- understand the terms Rapid Prototyping, Rapid Tooling, and Direct Manufacturing and name individual processes and application examples.
- understand the elements and properties of cyber-physical production plants.

Automation and Robotics

On successful completion, students will be able to

- understand the basic aspects of automation.
- understand the different sizes and units in measurement technology.
- differentiate between different measurement methods.
- understand the basic structure of measuring equipment.
- select a suitable sensor based on various criteria.
- understand the elements of control systems.
- describe the behavior of control systems in the time and frequency domain.
- understand the basic principles of control technology.
- convert between different number systems and apply Boolean algebra.
- understand the structure of switching networks, plants, and storages.
- understand important elements of control systems such as signal generators and power amplifiers.
- design simple programmable logic controllers.
- understand the basic structure of industrial robots.
- calculate different movements and positions of jointed-arm robots.

Production Engineering Industry 4.0

Course Code: DLBDSEAR01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The aim of the course is to provide students with an overview of the processes that have influenced and still influence production processes through technological developments under the generic term Industry 4.0, based on traditional, standardized manufacturing techniques. These include, in particular, technological advances in additive manufacturing processes that enable applications such as rapid prototyping, rapid tooling, and direct manufacturing. Finally, the course deals with the consequences of the digitalization and networking of production facilities and their elements in the sense of a cyber-physical system.

Course Outcomes

On successful completion, students will be able to

- understand the basic concepts and interrelationships of production engineering.
- understand current changes in manufacturing technology due to technologies such as additive manufacturing and megatrends such as cyber physical systems.
- assign different manufacturing processes to the main manufacturing groups according to DIN 8580.
- understand the basic principle of additive manufacturing processes.
- distinguish between different additive manufacturing processes.
- understand the terms Rapid Prototyping, Rapid Tooling, and Direct Manufacturing and name individual processes and application examples.
- understand the elements and properties of cyber-physical production plants.

Contents

1. Introduction to Manufacturing Technology
 - 1.1 Basic Terms and Contexts in Manufacturing Theory
 - 1.2 Historical Development of Production
 - 1.3 The Discussion About the Long Tail
2. Classification Of Manufacturing Processes
 - 2.1 Casting and Molding
 - 2.2 Forming
 - 2.3 Machining
 - 2.4 Joining

- 2.5 Coating
- 2.6 Changing the Properties of Substances
3. Additive Manufacturing Processes
 - 3.1 Basic Principles and Legal Aspects
 - 3.2 Stereolithography (STL)
 - 3.3 Selective Laser Sintering and Selective Beam Melting With Laser or Electron Beam
 - 3.4 Fused Deposition Modeling (FDM)
 - 3.5 Multi-Jet Modeling (MJM) and Poly-Jet Process (PJM)
 - 3.6 3D Printing Process (3DP)
 - 3.7 Laminating Processes
 - 3.8 Mask Sintering
4. Rapid Prototyping
 - 4.1 Definition
 - 4.2 Strategic and Operational Aspects
 - 4.3 Application Areas and Examples
5. Rapid Tooling
 - 5.1 Definition, Strategic, and Operational Aspects
 - 5.2 Indirect and Direct Procedures
6. Direct/Rapid Manufacturing
 - 6.1 Potentials and Requirements for Procedures
 - 6.2 Implementation, Application Areas, and Examples
7. Cyber-Physical Production Plants
 - 7.1 Derivation of the Terms Industry 4.0 and Cyber-Physical Systems
 - 7.2 Megatrend Cyber Physical Systems (CPS)
 - 7.3 Definition Cyber-Physical Production Plant
 - 7.4 Effects on Planning and Operation of Production Facilities
 - 7.5 Dynamic Reconfiguration and Migration of Production Facilities

Automation and Robotics

Course Code: DLBDSEAR02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	DLBDSEAR01

Course Description

The aim of the course is to provide students with an insight into measurement, control, and regulation technology and convey the basics of robotics. Students will be taught which methods can be used to determine certain measured variables and how measurement errors are dealt with. Based on these fundamentals, various sensors will be presented and students will be able to select suitable sensors based on predefined criteria. The course also introduces students to the basics of control engineering. The different ways of describing the structure and behaviour of control systems are illustrated to the students. The basics of control engineering are also taught. The students receive a short introduction to binary number systems and Boolean algebra, and deal with various basal circuit and control elements. Finally, students will gain an insight into robotics with a focus on industrial robots. In this context, the students learn the description and calculation of positions and movements of individual limbs of a robot arm.

Course Outcomes

On successful completion, students will be able to

- understand the basic aspects of automation.
- understand the different sizes and units in measurement technology.
- differentiate between different measurement methods.
- understand the basic structure of measuring equipment.
- select a suitable sensor based on various criteria.
- understand the elements of control systems.
- describe the behavior of control systems in the time and frequency domain.
- understand the basic principles of control technology.
- convert between different number systems and apply Boolean algebra.
- understand the structure of switching networks, plants, and storages.
- understand important elements of control systems such as signal generators and power amplifiers.
- design simple programmable logic controllers.
- understand the basic structure of industrial robots.
- calculate different movements and positions of jointed-arm robots.

Contents

1. Basics of Automation
 - 1.1 Basic Terms

- 1.2 Economic Aspects
- 1.3 Automation Pyramid
- 1.4 Measuring, Control, and Regulation Systems
2. Fundamentals of Measurement Technology
 - 2.1 Measurands and Units
 - 2.2 Forms of Measurement Signals
 - 2.3 Measurement Techniques
 - 2.4 Measuring Equipment
 - 2.5 Evaluation of Measurements and Measurement Errors
3. Sensors
 - 3.1 Function and Elements of Sensors
 - 3.2 Criteria for the Selection of Sensors
 - 3.3 Proximity Switches
 - 3.4 Photoelectric Sensors
 - 3.5 Ultrasonic Sensors
 - 3.6 Rotary Encoder
 - 3.7 Force, Torque, and Pressure Gauges
 - 3.8 Temperature Sensors
 - 3.9 Image Processing Sensors
4. Basics of Control Engineering
 - 4.1 Elements of Control Systems
 - 4.2 Structure Description
 - 4.3 Static Behavioral Description
 - 4.4 Behavioral Description in the Time Domain
 - 4.5 Behavioral Description in the Frequency Domain
 - 4.6 Practical examples
5. Basics of Control Technology
 - 5.1 Basic Principle and Elements of Control Systems
 - 5.2 Numerical Representations
 - 5.3 Boolean Algebra
 - 5.4 Switching Networks, Plants, and Storage Facilities
 - 5.5 Signal Generators and Power Amplifiers
 - 5.6 Programmable Logic Controllers
 - 5.7 Connection-Programmed Controls

6. Introduction to Robotics
 - 6.1 Terms and Classification
 - 6.2 Basic Elements
 - 6.3 Classification of Robots

7. Kinematics of a Robot
 - 7.1 Coordinate Systems and Reference Points
 - 7.2 Rotations
 - 7.3 Forward and Reverse Transformations
 - 7.4 Denavit-Hartenberg Transformation

Module Contents**Self-Driving Vehicles**

- Safety standards
- Sensor fusion
- Computer vision
- Localization & motion
- Motion planning

Seminar: Current Topics and Trends in Self-Driving Technology

The seminar covers current topics of autonomous vehicles. The choice of topics can include (but are not limited to) recent technical advances as well as philosophical issues or implications for society, law, or relevant industries.

Learning Outcomes**Self-Driving Vehicles**

On successful completion, students will be able to

- cite relevant safety standards.
- grasp the concepts of sensors and sensor fusion.
- apply computer vision techniques to detect features.
- evaluate images in terms of semantic segmentation.
- understand motion models and localization approaches.
- utilize motion planning techniques.

Seminar: Current Topics and Trends in Self-Driving Technology

On successful completion, students will be able to

- transfer theoretical knowledge and methods to new domains.
- understand recent developments in self-driving vehicles.
- create new insights based on detailed studies of current research and technology.

Self-Driving Vehicles

Course Code: DLBDSEAD01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course focuses on the foundations of autonomous vehicles and starts with a detailed introduction to relevant safety standards in terms of functional and IT security. This course continues with a presentation of the concept of sensor fusion and discusses relevant aspects of computer vision techniques such as feature detection, calibration, and semantic segmentation. A large part of the course concerns localization and motion planning. Relevant motion models are introduced and localization techniques such as odometry, triangulation, and satellite-based systems are discussed in detail, along with path planning, motion prediction, and trajectory generation.

Course Outcomes

On successful completion, students will be able to

- cite relevant safety standards.
- grasp the concepts of sensors and sensor fusion.
- apply computer vision techniques to detect features.
- evaluate images in terms of semantic segmentation.
- understand motion models and localization approaches.
- utilize motion planning techniques.

Contents

1. Sensors
 - 1.1 Physical principles of sensors
 - 1.2 Types of sensors
 - 1.3 Sensor calibration
 - 1.4 Application scenarios
2. Sensor Fusion
 - 2.1 Elaborating data from sensors
 - 2.2 The Kalman filter
 - 2.3 Object tracking
3. Computer Vision
 - 3.1 Pixels and filters

- 3.2 Feature detection
- 3.3 Semantic segmentation
- 4. Localization & Motion
 - 4.1 Motion models
 - 4.2 Trilateration
 - 4.3 Satellite-based localization
- 5. Motion planning
 - 5.1 Mission planning
 - 5.2 Behavior Planning
 - 5.3 Local Planning
- 6. Safety Standards
 - 6.1 Functional Safety
 - 6.2 Safety of Intended Functionality
 - 6.3 IT Security

Seminar: Current Topics and Trends in Self-Driving Technology

Course Code: DLBDSEAD02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course focuses on recent developments in the field of self-driving vehicles. Following the course Self-Driving Vehicles (DLBDSEAD01), in this course students will focus on a particular topic in the context of autonomous driving, applying the knowledge they have obtained in the first course. Finally, a research essay will be written.

Course Outcomes

On successful completion, students will be able to

- transfer theoretical knowledge and methods to new domains.
- understand recent developments in self-driving vehicles.
- create new insights based on detailed studies of current research and technology.

Contents

- The seminar covers current topics of autonomous vehicles. The choice of topics can include (but are not limited to) recent technical advances as well as philosophical issues or implications for society, law, or relevant industries.

Module Contents

Introduction to Financial Services Sector

- History of Banking and Central Banks
- Capital Markets
- Interest Rates and Derivatives
- Current Developments in Financial Service Sector

Introduction to Banking Law, Regulation and Ethics

- The Banking Universe
- Ethics, Regulation and Professional Code of Conduct
- Various Risks and Current Developments in Fintech

Learning Outcomes

Introduction to Financial Services Sector

On successful completion, students will be able to

- demonstrate knowledge and understanding of financial institutions and identify the different types of services that they provide to meet the needs of their customers.
- explain the issues that arise in the intermediation and disintermediation of banks.
- discuss the types of risk that affect financial institutions and how to mitigate them.
- discuss current issues in the financial services sector.

Introduction to Banking Law, Regulation and Ethics

On successful completion, students will be able to

- demonstrate an understanding of the key elements of law relating to bank.
- explain the reasons for regulation of the financial services industry and the key principles of that regulation, including both statutory and self-regulation.
- demonstrate awareness and understanding of current issues in the banking environment including those relating to ethics and codes of conduct.
- discuss current regulatory issues in the financial services sector.

Introduction to Financial Services Sector

Course Code: LIBFBBAEFFB01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This is an introductory module that exposes you to key forces driving change in the financial services industry. The module is designed to provide an introduction to the environment within which the financial services industry operates and to explore the main components of the financial system. Traditionally, banks have been acting as intermediaries between borrowers and lenders, but changes to this model have generated expansion of the industry as well as increased risks. Several main players are considered, namely the central bank, commercial banks, retail banks, global investment banks, asset managers, hedge funds, insurance companies, private wealth managers, brokers, stock exchanges, and regulators.

Course Outcomes

On successful completion, students will be able to

- demonstrate knowledge and understanding of financial institutions and identify the different types of services that they provide to meet the needs of their customers.
- explain the issues that arise in the intermediation and disintermediation of banks.
- discuss the types of risk that affect financial institutions and how to mitigate them.
- discuss current issues in the financial services sector.

Contents

1. History of Banking
 - 1.1 Money
 - 1.2 Development of Banking System
2. Deposit-Taking and Non-Deposit Taking Financial Institutions
 - 2.1 Depository (eg Banks, Building Societies)
 - 2.2 Non-Depository (eg Pension Funds, Unit Trusts, Insurance Companies)
 - 2.3 Financial Intermediaries and the Products They Deal In
 - 2.4 Non-Marketable Securities
3. Central Banks
 - 3.1 Structure
 - 3.2 Functions

- 3.3 Comparison of World Central Banks
4. Capital Markets
 - 4.1 Financial Markets – And the Products They Deal In
 - 4.2 Marketable Securities
5. Interest Rates and Derivatives
 - 5.1 The Important Relationship Between Risk, Term and Return
 - 5.2 Market Participants
6. Current Developments
 - 6.1 Wider Societal Implications Are Considered e.g. Financial Inclusion, Fossil Fuels/ Extractive Industries Finance
 - 6.2 Socially Responsible Investments and Environmental, Societal and Governance Issues

Introduction to Banking Law, Regulation and Ethics

Course Code: LIBFBBAEFFB02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This is an introductory module that provides an overview of banking law and regulation. This covers private commercial law developed through banking custom, standards of good practice, and the common law. Consumer protection is at the center of many banking law and regulatory requirements. This module also considers the how firms operate according to ethical values, and demonstrates how governance, strategy and decision making has been informed by ethical principles.

Course Outcomes

On successful completion, students will be able to

- demonstrate an understanding of the key elements of law relating to bank.
- explain the reasons for regulation of the financial services industry and the key principles of that regulation, including both statutory and self-regulation.
- demonstrate awareness and understanding of current issues in the banking environment including those relating to ethics and codes of conduct.
- discuss current regulatory issues in the financial services sector.

Contents

1. Legal Basis of Banking
 - 1.1 Legal Issues
 - 1.2 Contract Law
2. The Banking Universe
 - 2.1 The World's Largest Banks
 - 2.2 Types of Banks
 - 2.3 The Payments System
3. The Global Financial Crisis
 - 3.1 Causes
 - 3.2 Aftermath
 - 3.3 Response
4. Ethics in Banking

- 4.1 What is Ethics?
- 4.2 Business Ethics
- 4.3 Ethical Banking
5. Regulation and Professional Code of Conduct
 - 5.1 Regulators
 - 5.2 Professional Bodies
 - 5.3 Supervision Accords
6. Risk
 - 6.1 Credit Risk
 - 6.2 Market Risk
 - 6.3 Operational Risk
 - 6.4 Liquidity Risk
 - 6.5 Reputational Risk
7. Current Developments
 - 7.1 Challengers
 - 7.2 Fintech

Module Contents**Data Engineering**

- understand important foundational concepts in data engineering.
- recognize established and commonly-employed NoSQL datastores and their salient characteristics.
- comprehend common architectural patterns for data processing at scale.
- explain the concept of containerization as a virtualization approach.
- analyze operational challenges in the set-up and maintenance of data pipelines.
- demonstrate familiarity with concepts relating to data security and protection.

Project: Data Engineering

- formulate and implement a real-world data engineering use case.
- select appropriate resources for the task at hand.
- transfer acquired specialized knowledge in data engineering to a real-world use case.
- derive relevant design choices from the given project setting.
- analyze the suitability of different solution options with respect to the project task.
- make apposite choices with respect to implementation alternatives.

Learning Outcomes**Data Engineering**

On successful completion, students will be able to

- understand important foundational concepts in data engineering.
- recognize established and commonly-employed NoSQL datastores and their salient characteristics.
- comprehend common architectural patterns for data processing at scale.
- explain the concept of containerization as a virtualization approach.
- analyze operational challenges in the set-up and maintenance of data pipelines.
- demonstrate familiarity with concepts relating to data security and protection.

Project: Data Engineering

On successful completion, students will be able to

- formulate and implement a real-world data engineering use case.
- select appropriate resources for the task at hand.
- transfer acquired specialized knowledge in data engineering to a real-world use case.
- derive relevant design choices from the given project setting.
- analyze the suitability of different solution options with respect to the project task.
- make apposite choices with respect to implementation alternatives.

Data Engineering

Course Code: DLBDESE01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course explores concepts of data engineering. Data engineering is concerned with the infrastructure aspects of data science such as data storage and provision, as well as the provisioning of suitable operational environments. After laying out foundational notions and concepts of the discipline, this course addresses important developments in storage technology; aspects of systems architecture for processing data at scale; containerization as a modern take on virtualization; and the logic of data pipelines and associated operational aspects. Important issues pertaining to data security and protection are also given appropriate attention.

Course Outcomes

On successful completion, students will be able to

- understand important foundational concepts in data engineering.
- recognize established and commonly-employed NoSQL datastores and their salient characteristics.
- comprehend common architectural patterns for data processing at scale.
- explain the concept of containerization as a virtualization approach.
- analyze operational challenges in the set-up and maintenance of data pipelines.
- demonstrate familiarity with concepts relating to data security and protection.

Contents

1. Foundations of Data Engineering
 - 1.1 Reliability
 - 1.2 Scalability
 - 1.3 Maintainability
2. NoSQL In Depth
 - 2.1 Fundamentals of NoSQL
 - 2.2 Established NoSQL solutions
3. Architectures for Data Processing at Scale
 - 3.1 Batch processing architectures
 - 3.2 Architectures for stream and complex event processing
 - 3.3 Lambda architecture

4. Containerization In Depth
 - 4.1 Docker containers
 - 4.2 Container management
5. Governance & Security
 - 5.1 Data protection
 - 5.2 Data security
 - 5.3 Data governance
6. Operational Aspects
 - 6.1 Defining principles of DataOps
 - 6.2 Building and maintaining data pipelines
 - 6.3 Metrics and monitoring

Project: Data Engineering

Course Code: DLBDSEDE02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The focus of this course is the implementation of a real-world data engineering use case in the form of a student portfolio. To this end, students choose a project subject from the various sub-domains of data engineering. Examples include setting up a Docker container environment or dockerized service; implementing a data pipeline according to DataOps principles; and setting up an NoSQL data store. The goal is for students to demonstrate they can transfer theoretical knowledge to an implementation scenario that closely mimics practical work in a professional data engineering setting.

Course Outcomes

On successful completion, students will be able to

- formulate and implement a real-world data engineering use case.
- select appropriate resources for the task at hand.
- transfer acquired specialized knowledge in data engineering to a real-world use case.
- derive relevant design choices from the given project setting.
- analyze the suitability of different solution options with respect to the project task.
- make apposite choices with respect to implementation alternatives.

Contents

- This course covers the practical implementation of approaches and techniques covered in the preceding methodological course in a project-oriented setting. Each participant must produce a portfolio detailing and documenting the work. Portfolio themes are chosen from a list, or suggested by the students in accord with the tutor.

Module Contents**Advanced Data Analysis**

- Business performance analytics
- Text mining
- Web- and social media analytics
- Experimentation and testing

Project: Data Analysis

Transfer of methodological knowledge to the implementation of real-world analytics use cases from the above-mentioned problem domains.

Learning Outcomes**Advanced Data Analysis**

On successful completion, students will be able to

- identify important design considerations for business KPIs.
- explain various topics in business process analytics.
- utilize established techniques for web data analytics.
- understand analytical approaches to text mining and semantic analysis.
- disambiguate relevant questions in social media analytics.
- use the techniques and methods for experimentation and testing.

Project: Data Analysis

On successful completion, students will be able to

- formulate and implement a real-world analytical use case.
- analyze the suitability of different possible approaches with respect to the project task.
- transfer acquired specialized analytical knowledge to real-world use cases.
- derive relevant design choices from the given project setting.
- make apposite choices with respect to implementation alternatives.
- select appropriate resources

Advanced Data Analysis

Course Code: DLBDSEDA01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course introduces several advanced analytics subjects of practical relevance. The subject areas covered span from business performance measurement and analytics, text mining, and web- and social media analytics to current trends in experimental design and setup. Along this journey topics such as the design of key performance indicators (KPIs), business process analytics, word frequency and semantic analysis, data science on clickstreams, social media interactions, and multi-armed bandit testing are addressed.

Course Outcomes

On successful completion, students will be able to

- identify important design considerations for business KPIs.
- explain various topics in business process analytics.
- utilize established techniques for web data analytics.
- understand analytical approaches to text mining and semantic analysis.
- disambiguate relevant questions in social media analytics.
- use the techniques and methods for experimentation and testing.

Contents

1. Business Performance Analytics
 - 1.1 KPI design considerations
 - 1.2 Common business performance indicators
 - 1.3 Business process mining
2. Text Analytics
 - 2.1 Word and document frequency (TF-IDF)
 - 2.2 Semantic analysis
3. Web Analytics
 - 3.1 Web metrics
 - 3.2 Clickstream analytics
 - 3.3 Recommender systems
4. Social Network Mining

- 4.1 Introduction to social media analytics
- 4.2 Mining common social media platforms
- 5. Testing and Experimentation
 - 5.1 Practical A/B testing
 - 5.2 Multivariate tests
 - 5.3 Multi-armed bandit testing

Module Contents**Artificial Intelligence**

- History of AI
- Modern AI systems
- Reinforcement learning
- Natural language processing
- Computer vision

Project: Artificial Intelligence

This course focuses on developing a simple AI system for a specific application and domain. A current list of topics is located in the Learning Management System.

Learning Outcomes**Artificial Intelligence**

On successful completion, students will be able to

- chart the historical developments in artificial intelligence.
- understand the approach of contemporary AI systems.
- comprehend the concepts behind reinforcement learning.
- analyze natural language using basic NLP techniques.
- scrutinize images and their contents.

Project: Artificial Intelligence

On successful completion, students will be able to

- determine the requirements for building an artificial intelligence system.
- evaluate an application for an AI system.
- transfer theoretically-sound and practically-proven methods and tools to an application domain.
- create an AI system for a chosen application.

Artificial Intelligence

Course Code: DLBDSEAIS01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The quest for artificial intelligence (AI) has captured humanity's interest for many decades and has been an active research area since the 1960s. This course will give a detailed overview of the historical developments, successes, and set-backs in AI, as well as modern approaches in the development of artificial intelligence. This course gives an introduction to reinforcement learning, a process similar to how humans and animals experience the world: exploring the environment and inferring the best course of action. This course also covers the principles of natural language processing and computer vision, both of which are key ingredients for an artificial intelligence to be able to interact with its environment.

Course Outcomes

On successful completion, students will be able to

- chart the historical developments in artificial intelligence.
- understand the approach of contemporary AI systems.
- comprehend the concepts behind reinforcement learning.
- analyze natural language using basic NLP techniques.
- scrutinize images and their contents.

Contents

1. History of AI
 - 1.1 Historical Developments
 - 1.2 AI Winter
 - 1.3 Expert Systems
 - 1.4 Notable Advances
2. Modern AI Systems
 - 2.1 Narrow versus General AI
 - 2.2 Application Areas
3. Reinforcement Learning
 - 3.1 What is Reinforcement Learning?
 - 3.2 Markov Chains and Value Function

3.3 Time-Difference and Q Learning

4. Natural Language Processing (NLP)

4.1 Introduction to NLP and Application Areas

4.2 Basic NLP Techniques

4.3 Vectorizing Data

5. Computer Vision

5.1 Introduction to Computer Vision

5.2 Image Representation and Geometry

5.3 Feature Detection

5.4 Semantic Segmentation

Project: Artificial Intelligence

Course Code: DLBDSEAIS02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This project course will give students hands-on experience in the challenging task of designing and developing an AI system for a specific application and domain. Students will need to consider requirements and practical constraints as well as the desired output of the AI system. Following this course the students will get holistic overview of developing a specific AI-based application.

Course Outcomes

On successful completion, students will be able to

- determine the requirements for building an artificial intelligence system.
- evaluate an application for an AI system.
- transfer theoretically-sound and practically-proven methods and tools to an application domain.
- create an AI system for a chosen application.

Contents

- This project course focuses on understanding and implementing a simple AI system. Based on the course Artificial Intelligence (DLBDSEAI01), students will design and implement a simple AI system. In the first step, students will choose a specific application and domain and then use the methods from the course to analyze the requirements and outcomes before implementing their own AI application. All relevant artifacts and considerations are documented by the students in a course portfolio.

Module Contents**International Marketing**

- International marketing strategy
- Cultural differences and their significance for marketing
- International marketing mix (product, price, promotion, and distribution decisions in an international environment)
- International market research and consumer behavior
- Ethical aspects in international marketing
- International marketing controlling and six sigma

International Brand Management

- Basics of brand management
- Framework conditions for brands in international markets
- Strategies and concepts of international brands
- Brand architectures and brand extension options
- Brand management and communication
- Brand management according to the stakeholder concept
- Brand control and protection

Learning Outcomes**International Marketing**

On successful completion, students will be able to

- understand basic aspects of international strategic marketing.
- analyze cultural differences and their impact on international marketing.
- apply selected concepts of the international marketing mix.
- describe the possibilities of international market research and its influence on consumer behavior.
- recognize the necessity of international brand controlling and quality management.
- reproduce theoretical knowledge using case studies.

International Brand Management

On successful completion, students will be able to

- recognize the significance of a brand and the general conditions under which brands operate, as well as the associated tasks of brand management.
- describe the components of a brand and its management.
- explain the positioning of brands on regional, national and international markets.
- understand the role of brand evaluation and compare the most common measurement techniques.
- give an overview of the importance of trademark protection and suggest strategies for preventing counterfeiting.
- conceive of brand strategies and measures for the avoidance or occurrence of brand crises.

International Marketing

Course Code: DLBDSEIMB01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Students are taught the necessity for strategic marketing in an international context. They will learn about essential cultural differences and their influences on international marketing management. The basic decisions, standardizations, and adaptations in international marketing are experienced by the students on the basis of different concepts in the international marketing mix. The necessity of international market research, strategic planning, and control are taught to the students, along with the ethical aspects in international marketing. The students analyze current topics in international marketing management and reflect on them in connection with the concepts they have learned in this course.

Course Outcomes

On successful completion, students will be able to

- understand basic aspects of international strategic marketing.
- analyze cultural differences and their impact on international marketing.
- apply selected concepts of the international marketing mix.
- describe the possibilities of international market research and its influence on consumer behavior.
- recognize the necessity of international brand controlling and quality management.
- reproduce theoretical knowledge using case studies.

Contents

1. Strategic International Marketing
 - 1.1 Internationalization
 - 1.2 Theoretical Foundations of International Market Entry Strategies
 - 1.3 Forms of International Market Entry
2. Cultural Differences as an Aspect of International Marketing
 - 2.1 Overview of Culture
 - 2.2 Cultural Model Based on Hofstede
 - 2.3 Cultural Model Based on Trompenaars
3. Case Studies in International Market Entry and Marketing Strategies
 - 3.1 Case Study: Nivea in South Korea

- 3.2 Case Study: Bosch and Siemens Hausgeräte GmbH in China
 - 3.3 Case Study: Siemens Mobile in China
 - 3.4 Case Study: Siemens in China
4. International Product Management and Product Development
 - 4.1 Goals of International Product Management
 - 4.2 Framework Conditions for International Product Management
 - 4.3 International Product Decisions
 - 4.4 International Product Development
5. Exchange Rate Fluctuations and International Price Calculation
 - 5.1 Tasks and Objectives of International Price Management
 - 5.2 Factors Influencing International Price Management
 - 5.3 Instruments of International Price Management
6. International Communication and International Sales Policy
 - 6.1 International Communication Management
 - 6.2 International Sales Management
7. International Marketing and Ethics
 - 7.1 Overview of International Marketing and Ethics
 - 7.2 Business Ethics in International Companies
 - 7.3 Case Study: Nestlé
8. Applied Market Research and Its Influence on Consumer Behavior
 - 8.1 Scope of International Market Research
 - 8.2 Requirements for International Market Research Information
 - 8.3 International Secondary Research
 - 8.4 International Primary Research
9. Monitoring and Control in International Marketing
 - 9.1 Controlling in International Management
10. Six Sigma, Brand Management, and Rebranding
 - 10.1 Six Sigma: Basics, Definitions, and Processes
 - 10.2 Brand Management
 - 10.3 Rebranding

International Brand Management

Course Code: DLBDSEIMB02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The aim of this course is to deepen and expand the knowledge acquired in the introductory elective course International Marketing. The value of a brand is a decisive competitive advantage for companies in international business. Brands create long-term and profitable customer relationships. Brands are therefore valuable assets for companies and organizations. Students learn the basics of brand management before moving on to the concepts and success factors of international brand management. Students also become familiar with the structure of brand architectures and the possibilities of brand extensions. The fact that different stakeholder groups must be taken into account in brand management is communicated to the students on the basis of the stakeholder concept. In addition, the students get to know the various methods for measuring brand value and brand controlling. The aspects of trademark protection that are particularly important in an international environment will be dealt with conclusively.

Course Outcomes

On successful completion, students will be able to

- recognize the significance of a brand and the general conditions under which brands operate, as well as the associated tasks of brand management.
- describe the components of a brand and its management.
- explain the positioning of brands on regional, national and international markets.
- understand the role of brand evaluation and compare the most common measurement techniques.
- give an overview of the importance of trademark protection and suggest strategies for preventing counterfeiting.
- conceive of brand strategies and measures for the avoidance or occurrence of brand crises.

Contents

1. Basics of Brand Management
 - 1.1 Brand Significance and Brand Understanding
 - 1.2 Market Conditions
 - 1.3 Tasks and Goals of Brand Management
2. Brand Identity, Brand Positioning, and Brand Personality
 - 2.1 Brand Identity as the Basis of Brand Management

- 2.2 Brand Positioning
 - 2.3 Brand Image
 - 2.4 Brand Personality
3. Brand Strategies
 - 3.1 The Challenges for Brand Strategies
 - 3.2 Brand Strategies for New Products
 - 3.3 Trademark Licensing
4. International Branding
 - 4.1 Importance of Branding for International Companies
 - 4.2 Brand Concepts for International Brands
 - 4.3 Factors for Successful International Brands
5. Brand Architectures and Types of Branding
 - 5.1 Brand Hierarchies
 - 5.2 Co-branding and Ingredient Branding
6. Brand Management and Communication
 - 6.1 Classic Brand Communication
 - 6.2 Brand Communication on the Internet
7. Brand Expansion
 - 7.1 Basics of Brand Extension
 - 7.2 Opportunities and Risks of Brand Extension
 - 7.3 Ideal Typical Sequence of the Brand Extension Process
8. Brand Management According to the Stakeholder Concept
 - 8.1 Basics of Brand Management According to the Stakeholder Principle
 - 8.2 Stakeholder Groups: Consumer Stakeholder Groups
 - 8.3 Stakeholder Groups: Shareholders and Financial Investors
 - 8.4 Stakeholder Groups: Employees
 - 8.5 Stakeholder Groups: Suppliers and the Public
9. Brand Control
 - 9.1 Basics of Brand Controlling
 - 9.2 Importance and Measurement of Brand Value
 - 9.3 Practical Methods for Measuring Brand Value

10. Trademark Protection

10.1 Object of Trademark Protection

10.2 Origin of Trademark Protection

10.3 Trademark Infringements

Module Contents**Applied Sales I**

- Fundamentals of Applied Sales
- The Distribution System
- Personal Sales
- Sales Plans
- New Customer Acquisition
- A Sales Visit
- Conversational Tactics
- Conducting Negotiations
- Other Sales Channels

Applied Sales II

- Marketing and Sales
- Customer Satisfaction as a Success Factor
- Personalities in Sales
- Customer-Oriented Communication
- Presentation and Rhetoric
- Customer Loyalty
- Networking
- Case Study

Learning Outcomes

Applied Sales I

On successful completion, students will be able to

- understand the fundamentals of applied sales and place them in the context of the company.
- understand the interaction of the individual facets of applied sales.
- differentiate between and evaluate individual sales systems.
- describe current sales types and sales characteristics.
- oversee and classify the entire sales process from customer acquisition to customer retention.
- understand the basics of sales and negotiation management and apply them.
- name the usual sales instruments, recognize their advantages and disadvantages, and reflect on essential fields of application and possibilities.

Applied Sales II

On successful completion, students will be able to

- understand the interaction and the respective areas of responsibility of marketing and sales.
- reflect on and classify the goals and measures within the framework of the applied sales system.
- assess the relevance of customer satisfaction and retention. In addition, the students will be familiar with the central design elements of CRM.
- reflect on and assess alternative approaches to customer loyalty and relationship management and apply them in business practice.
- understand the meaning of the terms customer life cycle and customer value, and develop approaches to manage them in the sense of the respective sales targets.
- use descriptive presentation techniques in order to convince customers and other sales partners.
- understand the relevance of networking and develop strategies to broaden the contact base.
- develop and evaluate their own market analyses and sales concepts on the basis of practical experience within the framework of the case study.

Applied Sales I

Course Code: DLBDSEAS01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The demands on sales thinking are growing every day. Globalized demand combined with high competition is making it increasingly difficult for companies to compete for customers. At the same time, customers are becoming better informed, while traditional supply markets are saturated and at overcapacity. In order to be successful in such an environment, sales thinking and action are required along with a new type of salesperson. Within the course Applied Sales I (Introduction), the participants are familiarized with the basic concepts of applied sales. You will learn about sales organization, dealing with alternative sales channels, and get to know the dedicated sales planning process. The contents of the module are complemented by the successful acquisition of new customers, whereby particular attention is paid to the organization and implementation of customer visits and the conduct of discussions and negotiations.

Course Outcomes

On successful completion, students will be able to

- understand the fundamentals of applied sales and place them in the context of the company.
- understand the interaction of the individual facets of applied sales.
- differentiate between and evaluate individual sales systems.
- describe current sales types and sales characteristics.
- oversee and classify the entire sales process from customer acquisition to customer retention.
- understand the basics of sales and negotiation management and apply them.
- name the usual sales instruments, recognize their advantages and disadvantages, and reflect on essential fields of application and possibilities.

Contents

1. Fundamentals of Applied Sales and Distribution
 - 1.1 Tasks and Forms of Applied Distribution
 - 1.2 Marketing as the Basis of Sales

Applied Sales II

Course Code: DLBDSEAS02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The course Applied Sales II builds on the basics taught in the course "Applied Sales I" and broadens and deepens them. First, the tension between marketing and sales is examined in more detail. Based on this, essential backgrounds and central target figures for successful sales management (e.g., customer satisfaction and loyalty as well as the customer life cycle) are derived and operationalized in order to create the basis for efficient and effective customer relationship management. As the process progresses, attention will also be paid to mental processes and consumer behavior in general. In addition, strategies and paths to successful negotiation are deepened and supplemented by convincing communication techniques. The course concludes with a case study in the course of which the students have the opportunity to apply what they have learned in a practice-oriented manner.

Course Outcomes

On successful completion, students will be able to

- understand the interaction and the respective areas of responsibility of marketing and sales.
- reflect on and classify the goals and measures within the framework of the applied sales system.
- assess the relevance of customer satisfaction and retention. In addition, the students will be familiar with the central design elements of CRM.
- reflect on and assess alternative approaches to customer loyalty and relationship management and apply them in business practice.
- understand the meaning of the terms customer life cycle and customer value, and develop approaches to manage them in the sense of the respective sales targets.
- use descriptive presentation techniques in order to convince customers and other sales partners.
- understand the relevance of networking and develop strategies to broaden the contact base.
- develop and evaluate their own market analyses and sales concepts on the basis of practical experience within the framework of the case study.

Contents

1. Marketing and Sales
 - 1.1 Marketing and Business Philosophy
 - 1.2 Sales Marketing in Different Economic Sectors
 - 1.3 Relationship Marketing

- 1.4 (International) Marketing and Sales Integration
2. Customer Satisfaction as a Success Factor
 - 2.1 Customer Relationship Management (CRM)
 - 2.2 Customer Orientation Success Chain
 - 2.3 Customer Relationship Strategies
3. Customer Retention
 - 3.1 Customer Retention Management
 - 3.2 Customer Retention Tools
 - 3.3 Complaints Management
4. Customer-Oriented Communications
 - 4.1 Communication and Sales Promotion by Sales Staff
 - 4.2 Sales Promotion by Sales Team
 - 4.3 Sales Promotion by the Company
5. Personalities in Sales
 - 5.1 Sales Personalities
 - 5.2 Selling in Teams
 - 5.3 Negotiating with Committees
6. Presentation and Rhetoric
 - 6.1 Rhetoric in Sales
 - 6.2 Presentation Techniques
 - 6.3 Nonverbal Communication
7. Networking
 - 7.1 Organizational Networks and Networking
 - 7.2 Building and Shaping Relationships
 - 7.3 Networking via Social Media
8. Case Study—Multi-Vendor Customer Loyalty Programs
 - 8.1 German Consumer Goods Market & Drugstore Industry Situation
 - 8.2 PAYBACK—A German Synonym for Loyalty Cards

Module Contents**Supply Chain Management I**

- Historical and terminological aspects of the SCM concept
- Motives for the creation of cross-company value creation networks
- Design principles and effects of value creation networks
- Logistical core processes and SCM
- Information technology aspects of the SCM concept
- Coordination and collaboration of the network partners
- Industry-specific solutions of the SCM

Supply Chain Management II

- Strategic aspects of SCM
- SCM Practice: Tasks and Activities in the Core Planning Process
- SCM Practice: Tasks and Activities in the Core Process of Procurement
- SCM Practice: Tasks and Activities in the Core Process Production
- SCM Practice: Tasks and Activities in the Core Distribution Process

Learning Outcomes

Supply Chain Management I

On successful completion, students will be able to

- explain the importance of cross-company value creation processes.
- understand common concepts for modeling cross-company value creation processes.
- understand dynamic effects in supply chains and can systematize their causes and effects.
- explain important theoretical concepts for describing the characteristics and challenges of cross-company value creation processes.
- explain the approaches and problem categories commonly used in the context of supply chain management.
- understand important reference and/or management models for the concretization of supply chain systems.
- name and detail important roles and tasks in the SCM network.
- deal with the coordination problem of SCM and describe the common solution approaches.

Supply Chain Management II

On successful completion, students will be able to

- systematically explain the strategic relevance of enterprise-wide value creation processes.
- understand the most important tasks and problems in the SCM core process planning.
- systematize the elements and interrelationships in the CPFR model in a differentiated way.
- be familiar with the characteristics and peculiarities of contract logistics.
- understand the most important tasks and problems in the SCM core process procurement.
- explain central elements and characteristics of a procurement strategy.
- understand the most important tasks and problems in the SCM core process production.
- explain central elements and characteristics of a modern production strategy.
- understand the most important tasks and problems in the SCM core process distribution.
- explain central elements and characteristics of the so-called ECR concept.

Supply Chain Management I

Course Code: DLBDESESCM01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

SCM proves to be an extremely multi-faceted construct from both a theoretical and a practical point of view. An adequate understanding of the problem dimensions and modes of action of (global) cross-company value creation networks requires a multidimensional approach. It starts by considering logistical processes, with modern process, flow, and network standards forming an important basis for SCM. On the basis of such an approach, students should gain a fundamental understanding of SCM. From the point of view of a holistic approach, it also makes sense to also examine a number of other typical problem areas in addition to the logistical challenges of this concept. This includes IT aspects of SCM (e.g., APS systems), and questions to do with the collaboration and coordination of network partners. This course also considers selected industry specific SCM solutions (ECR or VMI).

Course Outcomes

On successful completion, students will be able to

- explain the importance of cross-company value creation processes.
- understand common concepts for modeling cross-company value creation processes.
- understand dynamic effects in supply chains and can systematize their causes and effects.
- explain important theoretical concepts for describing the characteristics and challenges of cross-company value creation processes.
- explain the approaches and problem categories commonly used in the context of supply chain management.
- understand important reference and/or management models for the concretization of supply chain systems.
- name and detail important roles and tasks in the SCM network.
- deal with the coordination problem of SCM and describe the common solution approaches.

Contents

1. Fundamentals of the Supply Chain Concept
 - 1.1 Terminological and Conceptual Fundamentals
 - 1.2 Supply Chain Typology According to Otto
 - 1.3 Supply Chain Typology According to Bechtel/Jayaram
 - 1.4 Dynamic Aspects of Supply Chains

2. Selected Theoretical Concepts for the Supply Chain Concept
 - 2.1 New Institutional Economics
 - 2.2 Game Theory
 - 2.3 Network Approach
 - 2.4 Other Theoretical Additions
3. Supply Chain Management
 - 3.1 Basic Information on the Goals and Scope of SCM
 - 3.2 Popular Problem Areas of the SCM
 - 3.3 Supply Chain Management as an Evolutionary Step in Logistics
 - 3.4 Supply Chain Management as Cooperation Management
4. SCM Model
 - 4.1 Basic Information on the Term SCM Models
 - 4.2 SCOR Model
 - 4.3 SCM Task Model
5. SCM as a Coordination Problem
 - 5.1 Basic Information on the Concept of Coordination
 - 5.2 Coordination Concepts, Context, and Perspectives of SCM
 - 5.3 Coordination Instruments

Supply Chain Management II

Course Code: DLBDESESCM02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

From the perspective of strategic management research and practice, the activities covered by the term SCM are closely related to efforts to build and/or maintain a stable operational competitive advantage. A fundamental discussion of this relationship forms the starting point for the course. On this basis, a differentiated analysis of strategy-relevant activities and instruments in the Plan, Source, Make, Deliver, and Return process categories is then carried out using the SCOR model. Special attention is given to the practice-relevant areas of SCM, e.g., order-promising (plan), supplier-relation-management (source), postponement (make), and the ECR-concept (deliver).

Course Outcomes

On successful completion, students will be able to

- systematically explain the strategic relevance of enterprise-wide value creation processes.
- understand the most important tasks and problems in the SCM core process planning.
- systematize the elements and interrelationships in the CPFR model in a differentiated way.
- be familiar with the characteristics and peculiarities of contract logistics.
- understand the most important tasks and problems in the SCM core process procurement.
- explain central elements and characteristics of a procurement strategy.
- understand the most important tasks and problems in the SCM core process production.
- explain central elements and characteristics of a modern production strategy.
- understand the most important tasks and problems in the SCM core process distribution.
- explain central elements and characteristics of the so-called ECR concept.

Contents

1. Strategic Aspects of SCM
 - 1.1 Strategic Thinking and Action: General Information
 - 1.2 Competition Focus and SCM
 - 1.3 Competition Location and SCM
 - 1.4 Competition Rules and SCM
2. SCM Practice: Core Process Planning
 - 2.1 General Preliminary Considerations
 - 2.2 Collaborative Planning, Forecasting, and Replenishment
 - 2.3 Order Promoting

- 2.4 Kanban
- 2.5 Integration of X-PL Logistics Service Providers
3. SCM Practice: Core Process Procurement
 - 3.1 General Preliminary Considerations
 - 3.2 Production Synchronous Procurement
 - 3.3 Sourcing Concepts
 - 3.4 Supplier Relations Management
4. SCM Practice: Core Process Production
 - 4.1 Selected Aspects of the Problem Background
 - 4.2 Collaborative Engineering
 - 4.3 Postponement Strategies
 - 4.4 Value Added Partnership
5. SCM Practice: Core Process Distribution
 - 5.1 Basic Information on the Distribution Problem
 - 5.2 Efficient Consumer Response (ECR)
 - 5.3 Consignment Warehouse

	<p><u>Managerial Economics</u></p> <ul style="list-style-type: none"> • Study Format "Duales myStudium": Exam, 90 Minutes • Study Format "Distance Learning": Exam, 90 Minutes • Study Format "myStudies": Exam, 90 Minutes <p><u>Corporate Finance and Investment</u></p> <ul style="list-style-type: none"> • Study Format "Distance Learning": Written Assessment: Written Assignment • Study Format "myStudies": Written Assessment: Written Assignment

Weight of Module

see curriculum

Module Contents**Managerial Economics**

- Basics
- The Invisible Hand of the Market
- Consumer Decisions
- Business Decisions I: Full Competition
- Business Decisions II: Partial Competition
- Business Decisions III: Game Theory
- Advanced Microeconomics

Corporate Finance and Investment

- Introduction to Corporate Finance
- Ownership and Corporate Governance
- Understanding Financial Statements and Key Performance Indicators
- Basic Concepts of Financial Theory
- Types of Capital and Financing
- Short-term Financing Decisions
- Capital Budgeting and Decision-Making Methods in Investment

Learning Outcomes

Managerial Economics

On successful completion, students will be able to

- understand basic economic interrelationships and apply them to different markets.
- explain the importance of supply, demand and market balance.
- assess the determinants of consumers' willingness to pay.
- discuss the determinants of production decisions and identify peak entrepreneurial strategies.
- assess the influence of different types of markets on production and price decisions.
- analyse strategic interactions between companies.
- critically question traditional economic models on the basis of findings from information and behavioural economics.

Corporate Finance and Investment

On successful completion, students will be able to

- recognize the targets and scope of corporate finance and the role of financial markets .
- understand agency-problems in corporations and how incentives and institutional and market mechanisms are used to mitigate agency costs .
- interpret financial statements and key performance indicators and draw conclusions about financing alternatives and potentials of a corporation.
- consider the time value of money and calculate the cost of capital used to optimize future project cash flow streams.
- implement a long-term financing strategy and structure for corporations based on an appropriate mix of equity, debt, leasing, and hybrid financial instruments.
- effectively utilize cash management and working capital management to reduce short-term financing needs and costs.
- prepare investment decisions, estimate expected project cash flows and incorporate cash flow related risks into the decision process.
- apply investment decision methodologies to evaluate and select favorable corporate investment projects.

Managerial Economics

Course Code: DLBBWME01_E

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The source for (almost) all economic questions is the issue of scarcity. Building on this insight, this course considers three central elements. First, an analysis of the interplay between supply and demand on markets is made. Secondly, the course will consider the development of insights into the behaviour of consumers in markets. In a third part, the course will focus on entrepreneurial decisions that depend, among other things, on production technology available and competitive conditions in markets. These three core elements are taught from an application-oriented standpoint, in which references to (current) challenges of the management of companies are established. The course includes both the examination of economic theories and their application in business practice.

Course Outcomes

On successful completion, students will be able to

- understand basic economic interrelationships and apply them to different markets.
- explain the importance of supply, demand and market balance.
- assess the determinants of consumers' willingness to pay.
- discuss the determinants of production decisions and identify peak entrepreneurial strategies.
- assess the influence of different types of markets on production and price decisions.
- analyse strategic interactions between companies.
- critically question traditional economic models on the basis of findings from information and behavioural economics.

Contents

1. Basics
 - 1.1 Definitions & Main Topics of Economics
 - 1.2 Thinking like an Economist
2. The Invisible Hand of the Market
 - 2.1 Supply and Demand
 - 2.2 Market Balance
 - 2.3 Flexibility
 - 2.4 Applications

3. Consumer Decisions
 - 3.1 Utility Theory
 - 3.2 Willingness to Pay
 - 3.3 Demand
 - 3.4 Applications
4. Business Decisions I: Full Competition
 - 4.1 Production
 - 4.2 Costs
 - 4.3 Supply
 - 4.4 Applications
5. Business Decisions II: Partial Competition
 - 5.1 Monopoly
 - 5.2 Monopolistic Competition
 - 5.3 Oligopoly
6. Business Decisions III: Game Theory
 - 6.1 Methodology
 - 6.2 Simultaneous Games
 - 6.3 Sequential Games
7. Advanced Microeconomics
 - 7.1 Information Economics
 - 7.2 Behavioural Economics

Corporate Finance and Investment

Course Code: DLBCFIE01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course introduces students to the targets and scope of corporate finance and the role of financial markets. The separation of ownership and control is a constituent feature of corporations; students explore the resulting agency problems and the mechanisms available to mitigate the costs of agency relationships. Students will be introduced to fundamentals of theory and practice regarding principles of modern corporate finance. They will learn to read and analyze financial statements from a financing point of view and develop a detailed understanding of concepts such as the time value of money, interest rates, and cost of capital. After introducing basic concepts, equity and debt financing will be discussed at length. The financial leverage effect on rates of return will be explored and leasing and hybrid financial instruments as an alternative to pure equity and debt financing are presented. Students will study how corporations apply short-term measures of financing and how effective cash and working capital management is used to reduce short-term financing needs and costs. This course will conclude with a discussion on the investment processes of corporations with a particular focus on the challenge of estimating expected cash flows. Students will learn how to include risk as a factor in the decision process and be able to analyse applied investment rules and methodologies.

Course Outcomes

On successful completion, students will be able to

- recognize the targets and scope of corporate finance and the role of financial markets .
- understand agency-problems in corporations and how incentives and institutional and market mechanisms are used to mitigate agency costs .
- interpret financial statements and key performance indicators and draw conclusions about financing alternatives and potentials of a corporation.
- consider the time value of money and calculate the cost of capital used to optimize future project cash flow streams.
- implement a long-term financing strategy and structure for corporations based on an appropriate mix of equity, debt, leasing, and hybrid financial instruments.
- effectively utilize cash management and working capital management to reduce short-term financing needs and costs.
- prepare investment decisions, estimate expected project cash flows and incorporate cash flow related risks into the decision process.
- apply investment decision methodologies to evaluate and select favorable corporate investment projects.

Contents

1. Introduction to Corporate Finance
 - 1.1 The Targets and Scope of Corporate Finance
 - 1.2 The Role of a Financial Manager
 - 1.3 The Financial Market Environment
2. Ownership and Corporate Governance
 - 2.1 Legal Types of Firms
 - 2.2 Agency Relations and Agency Problems in Corporations
 - 2.3 Institutional Investors, Incentives, and Market Control Mechanisms
3. Understanding Financial Statements and Key Performance Indicators
 - 3.1 Balance Sheets
 - 3.2 Income Statements
 - 3.3 Cash Flow Statements
 - 3.4 Measuring Performance: Key Performance Indicators
4. Basic Concepts of Financial Theory
 - 4.1 Time Value of Money and Cash Flow Streams
 - 4.2 Interest Rates: Determinants and Quotes
 - 4.3 Estimating the Cost of Capital
5. Types of Capital and Financing
 - 5.1 Equity Capital
 - 5.2 Debt Financing
 - 5.3 Leasing
 - 5.4 Financial Leverage and Capital Structure
6. Short-Term Financing Decisions
 - 6.1 Cash Budgets and Short-Term Financial Plans
 - 6.2 Treasury and Cash Management
 - 6.3 Working Capital Management
7. Capital Budgeting and Decision-Making Methods in Investment
 - 7.1 Capital Budgeting and Investments
 - 7.2 Incorporating Risk in Capital Budgeting Decisions
 - 7.3 Investment Rules and Decision-Making Methods

Module Contents

Smart Factory I

- Motivation and Definition of Terms
- Development of Automation
- Technological Basics and Standards
- Basic concepts of a Smart Factory
- Reference Architectures
- Smart Factory Engineering
- Safety and Security

Smart Factory II

A catalogue with the currently provided tasks is provided on the online platform of the module. It provides the content basis of the module and can be supplemented or updated by the seminar leader.

Learning Outcomes

Smart Factory I

On successful completion, students will be able to

- understand the term Smart Factory in the context of Industry 4.0.
- be able to trace the development of automation to a fully autonomous, non-centrally organized production plant.
- understand the basic technologies and standards used to design and operate a Smart Factory.
- understand the essential concepts of a Smart Factory.
- identify and differentiate between the individual elements of a Smart Factory using different reference architectures.
- understand the special engineering challenges in the Smart Energy context.
- understand the special safety risks of digitized and networked production plants and assign concrete recommendations for action.

Smart Factory II

On successful completion, students will be able to

- have a deeper understanding of the technologies and standards in the context of Smart Factory.
- apply technologies in the context of Smart Factory to a simple practical example.
- design a hardware or software prototype for a selected task.
- document, design, and develop activities in the form of a project report.

Smart Factory I

Course Code: DLBDESEF01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In this course, students will gain a deeper insight into the networking and digitization of production facilities by examining a Smart Factory. For this purpose, they will be familiarized with the basic goals of a Smart Factory in the context of the research complex Industry 4.0. After a brief introduction to the history of automation, students will learn the technical basics and standards required to design and operate a Smart Factory. Building on this, they will learn how these individual technologies are used to implement the central concepts of a Smart Factory. In order to understand which components a Smart Factory consists of, different reference architectures are presented and compared. The course concludes with the special engineering challenges of an autonomously acting and decentralized production plant. Above all, this includes IT security, which is particularly relevant due to the digital networking of production facilities and products.

Course Outcomes

On successful completion, students will be able to

- understand the term Smart Factory in the context of Industry 4.0.
- be able to trace the development of automation to a fully autonomous, non-centrally organized production plant.
- understand the basic technologies and standards used to design and operate a Smart Factory.
- understand the essential concepts of a Smart Factory.
- identify and differentiate between the individual elements of a Smart Factory using different reference architectures.
- understand the special engineering challenges in the Smart Energy context.
- understand the special safety risks of digitized and networked production plants and assign concrete recommendations for action.

Contents

1. Motivation and Definition of Terms
 - 1.1 Goals of Smart Factory
 - 1.2 Internet of Things
 - 1.3 Cyber-Physical Systems
 - 1.4 Cyber-Physical Production Systems
 - 1.5 Smart Factory as a Cyber-Physical (Production) System

2. Development of Automation
 - 2.1 Automation Pyramid
 - 2.2 Networked, Decentralized Organization of Production
 - 2.3 Future Challenges
3. Technological Basics and Standards
 - 3.1 Identification of Physical Objects
 - 3.2 Formal Description Languages and Ontologies
 - 3.3 Digital Object Memory
 - 3.4 Physical Situation Recognition
 - 3.5 (Partially) Autonomous Action and Cooperation
 - 3.6 Human-Machine Interaction
 - 3.7 Machine to Machine Communication
4. Basic Concepts of a Smart Factory
 - 4.1 Order-Controlled Production
 - 4.2 Bundling of Machine and Production Data
 - 4.3 Supporting People in Production
 - 4.4 Intelligent Products and Resources
 - 4.5 Smart Services
5. Reference Architectures
 - 5.1 Purpose and Properties of Reference Architectures
 - 5.2 Overview of Standardization Initiatives
 - 5.3 CyProS Reference Architecture
 - 5.4 RAMI 4.0 (DIN SPEC 91345)
6. Smart Factory Engineering
 - 6.1 Classification of Different Engineering Tools
 - 6.2 Virtual Engineering
 - 6.3 User-Centered Design
 - 6.4 Requirements Engineering
 - 6.5 Modelling
 - 6.6 Integration of Classic and Smart Components

Smart Factory II

Course Code: DLBDESEF02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In this course, students select a concrete task from the catalog of topics provided in consultation with the seminar leader. They will work on the task in a prototyping environment suited to the task, which can be either a hardware (e.g., prototyping boards) or software (e.g., technology-specific development environments) environment. To complete the task, students apply the concepts, methods, and tools taught in the Smart Factory I course. They document their results with a project report.

Course Outcomes

On successful completion, students will be able to

- have a deeper understanding of the technologies and standards in the context of Smart Factory.
- apply technologies in the context of Smart Factory to a simple practical example.
- design a hardware or software prototype for a selected task.
- document, design, and develop activities in the form of a project report.

Contents

- A catalogue with the currently provided tasks is provided on the online platform of the module. It provides the content basis of the module and can be supplemented or updated by the seminar leader.

Module Contents**Production Engineering Industry 4.0**

- Introduction to Manufacturing Technology
- Main Production Groups According to DIN 8580
- Additive Manufacturing Processes
- Rapid Prototyping
- Rapid Tooling
- Direct/Rapid Manufacturing
- Cyber-Physical Production Plants

Automation and Robotics

- Basics of Automation
- Fundamentals of Measurement Technology
- Sensors
- Basics of Control Engineering
- Basics of Control Technology
- Introduction to Robotics
- Kinematics of a Robot

Learning Outcomes

Production Engineering Industry 4.0

On successful completion, students will be able to

- understand the basic concepts and interrelationships of production engineering.
- understand current changes in manufacturing technology due to technologies such as additive manufacturing and megatrends such as cyber physical systems.
- assign different manufacturing processes to the main manufacturing groups according to DIN 8580.
- understand the basic principle of additive manufacturing processes.
- distinguish between different additive manufacturing processes.
- understand the terms Rapid Prototyping, Rapid Tooling, and Direct Manufacturing and name individual processes and application examples.
- understand the elements and properties of cyber-physical production plants.

Automation and Robotics

On successful completion, students will be able to

- understand the basic aspects of automation.
- understand the different sizes and units in measurement technology.
- differentiate between different measurement methods.
- understand the basic structure of measuring equipment.
- select a suitable sensor based on various criteria.
- understand the elements of control systems.
- describe the behavior of control systems in the time and frequency domain.
- understand the basic principles of control technology.
- convert between different number systems and apply Boolean algebra.
- understand the structure of switching networks, plants, and storages.
- understand important elements of control systems such as signal generators and power amplifiers.
- design simple programmable logic controllers.
- understand the basic structure of industrial robots.
- calculate different movements and positions of jointed-arm robots.

Production Engineering Industry 4.0

Course Code: DLBDSEAR01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The aim of the course is to provide students with an overview of the processes that have influenced and still influence production processes through technological developments under the generic term Industry 4.0, based on traditional, standardized manufacturing techniques. These include, in particular, technological advances in additive manufacturing processes that enable applications such as rapid prototyping, rapid tooling, and direct manufacturing. Finally, the course deals with the consequences of the digitalization and networking of production facilities and their elements in the sense of a cyber-physical system.

Course Outcomes

On successful completion, students will be able to

- understand the basic concepts and interrelationships of production engineering.
- understand current changes in manufacturing technology due to technologies such as additive manufacturing and megatrends such as cyber physical systems.
- assign different manufacturing processes to the main manufacturing groups according to DIN 8580.
- understand the basic principle of additive manufacturing processes.
- distinguish between different additive manufacturing processes.
- understand the terms Rapid Prototyping, Rapid Tooling, and Direct Manufacturing and name individual processes and application examples.
- understand the elements and properties of cyber-physical production plants.

Contents

1. Introduction to Manufacturing Technology
 - 1.1 Basic Terms and Contexts in Manufacturing Theory
 - 1.2 Historical Development of Production
 - 1.3 The Discussion About the Long Tail
2. Classification Of Manufacturing Processes
 - 2.1 Casting and Molding
 - 2.2 Forming
 - 2.3 Machining
 - 2.4 Joining

- 2.5 Coating
- 2.6 Changing the Properties of Substances
- 3. Additive Manufacturing Processes
 - 3.1 Basic Principles and Legal Aspects
 - 3.2 Stereolithography (STL)
 - 3.3 Selective Laser Sintering and Selective Beam Melting With Laser or Electron Beam
 - 3.4 Fused Deposition Modeling (FDM)
 - 3.5 Multi-Jet Modeling (MJM) and Poly-Jet Process (PJM)
 - 3.6 3D Printing Process (3DP)
 - 3.7 Laminating Processes
 - 3.8 Mask Sintering
- 4. Rapid Prototyping
 - 4.1 Definition
 - 4.2 Strategic and Operational Aspects
 - 4.3 Application Areas and Examples
- 5. Rapid Tooling
 - 5.1 Definition, Strategic, and Operational Aspects
 - 5.2 Indirect and Direct Procedures
- 6. Direct/Rapid Manufacturing
 - 6.1 Potentials and Requirements for Procedures
 - 6.2 Implementation, Application Areas, and Examples
- 7. Cyber-Physical Production Plants
 - 7.1 Derivation of the Terms Industry 4.0 and Cyber-Physical Systems
 - 7.2 Megatrend Cyber Physical Systems (CPS)
 - 7.3 Definition Cyber-Physical Production Plant
 - 7.4 Effects on Planning and Operation of Production Facilities
 - 7.5 Dynamic Reconfiguration and Migration of Production Facilities

Automation and Robotics

Course Code: DLBDSEAR02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	DLBDSEAR01

Course Description

The aim of the course is to provide students with an insight into measurement, control, and regulation technology and convey the basics of robotics. Students will be taught which methods can be used to determine certain measured variables and how measurement errors are dealt with. Based on these fundamentals, various sensors will be presented and students will be able to select suitable sensors based on predefined criteria. The course also introduces students to the basics of control engineering. The different ways of describing the structure and behaviour of control systems are illustrated to the students. The basics of control engineering are also taught. The students receive a short introduction to binary number systems and Boolean algebra, and deal with various basal circuit and control elements. Finally, students will gain an insight into robotics with a focus on industrial robots. In this context, the students learn the description and calculation of positions and movements of individual limbs of a robot arm.

Course Outcomes

On successful completion, students will be able to

- understand the basic aspects of automation.
- understand the different sizes and units in measurement technology.
- differentiate between different measurement methods.
- understand the basic structure of measuring equipment.
- select a suitable sensor based on various criteria.
- understand the elements of control systems.
- describe the behavior of control systems in the time and frequency domain.
- understand the basic principles of control technology.
- convert between different number systems and apply Boolean algebra.
- understand the structure of switching networks, plants, and storages.
- understand important elements of control systems such as signal generators and power amplifiers.
- design simple programmable logic controllers.
- understand the basic structure of industrial robots.
- calculate different movements and positions of jointed-arm robots.

Contents

1. Basics of Automation
 - 1.1 Basic Terms

- 1.2 Economic Aspects
- 1.3 Automation Pyramid
- 1.4 Measuring, Control, and Regulation Systems
2. Fundamentals of Measurement Technology
 - 2.1 Measurands and Units
 - 2.2 Forms of Measurement Signals
 - 2.3 Measurement Techniques
 - 2.4 Measuring Equipment
 - 2.5 Evaluation of Measurements and Measurement Errors
3. Sensors
 - 3.1 Function and Elements of Sensors
 - 3.2 Criteria for the Selection of Sensors
 - 3.3 Proximity Switches
 - 3.4 Photoelectric Sensors
 - 3.5 Ultrasonic Sensors
 - 3.6 Rotary Encoder
 - 3.7 Force, Torque, and Pressure Gauges
 - 3.8 Temperature Sensors
 - 3.9 Image Processing Sensors
4. Basics of Control Engineering
 - 4.1 Elements of Control Systems
 - 4.2 Structure Description
 - 4.3 Static Behavioral Description
 - 4.4 Behavioral Description in the Time Domain
 - 4.5 Behavioral Description in the Frequency Domain
 - 4.6 Practical examples
5. Basics of Control Technology
 - 5.1 Basic Principle and Elements of Control Systems
 - 5.2 Numerical Representations
 - 5.3 Boolean Algebra
 - 5.4 Switching Networks, Plants, and Storage Facilities
 - 5.5 Signal Generators and Power Amplifiers
 - 5.6 Programmable Logic Controllers
 - 5.7 Connection-Programmed Controls

6. Introduction to Robotics
 - 6.1 Terms and Classification
 - 6.2 Basic Elements
 - 6.3 Classification of Robots

7. Kinematics of a Robot
 - 7.1 Coordinate Systems and Reference Points
 - 7.2 Rotations
 - 7.3 Forward and Reverse Transformations
 - 7.4 Denavit-Hartenberg Transformation

Module Contents**Self-Driving Vehicles**

- Safety standards
- Sensor fusion
- Computer vision
- Localization & motion
- Motion planning

Seminar: Current Topics and Trends in Self-Driving Technology

The seminar covers current topics of autonomous vehicles. The choice of topics can include (but are not limited to) recent technical advances as well as philosophical issues or implications for society, law, or relevant industries.

Learning Outcomes**Self-Driving Vehicles**

On successful completion, students will be able to

- cite relevant safety standards.
- grasp the concepts of sensors and sensor fusion.
- apply computer vision techniques to detect features.
- evaluate images in terms of semantic segmentation.
- understand motion models and localization approaches.
- utilize motion planning techniques.

Seminar: Current Topics and Trends in Self-Driving Technology

On successful completion, students will be able to

- transfer theoretical knowledge and methods to new domains.
- understand recent developments in self-driving vehicles.
- create new insights based on detailed studies of current research and technology.

Self-Driving Vehicles

Course Code: DLBDSEAD01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course focuses on the foundations of autonomous vehicles and starts with a detailed introduction to relevant safety standards in terms of functional and IT security. This course continues with a presentation of the concept of sensor fusion and discusses relevant aspects of computer vision techniques such as feature detection, calibration, and semantic segmentation. A large part of the course concerns localization and motion planning. Relevant motion models are introduced and localization techniques such as odometry, triangulation, and satellite-based systems are discussed in detail, along with path planning, motion prediction, and trajectory generation.

Course Outcomes

On successful completion, students will be able to

- cite relevant safety standards.
- grasp the concepts of sensors and sensor fusion.
- apply computer vision techniques to detect features.
- evaluate images in terms of semantic segmentation.
- understand motion models and localization approaches.
- utilize motion planning techniques.

Contents

1. Sensors
 - 1.1 Physical principles of sensors
 - 1.2 Types of sensors
 - 1.3 Sensor calibration
 - 1.4 Application scenarios
2. Sensor Fusion
 - 2.1 Elaborating data from sensors
 - 2.2 The Kalman filter
 - 2.3 Object tracking
3. Computer Vision
 - 3.1 Pixels and filters

- 3.2 Feature detection
- 3.3 Semantic segmentation
4. Localization & Motion
 - 4.1 Motion models
 - 4.2 Trilateration
 - 4.3 Satellite-based localization
5. Motion planning
 - 5.1 Mission planning
 - 5.2 Behavior Planning
 - 5.3 Local Planning
6. Safety Standards
 - 6.1 Functional Safety
 - 6.2 Safety of Intended Functionality
 - 6.3 IT Security

Seminar: Current Topics and Trends in Self-Driving Technology

Course Code: DLBDSEAD02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course focuses on recent developments in the field of self-driving vehicles. Following the course Self-Driving Vehicles (DLBDSEAD01), in this course students will focus on a particular topic in the context of autonomous driving, applying the knowledge they have obtained in the first course. Finally, a research essay will be written.

Course Outcomes

On successful completion, students will be able to

- transfer theoretical knowledge and methods to new domains.
- understand recent developments in self-driving vehicles.
- create new insights based on detailed studies of current research and technology.

Contents

- The seminar covers current topics of autonomous vehicles. The choice of topics can include (but are not limited to) recent technical advances as well as philosophical issues or implications for society, law, or relevant industries.

Learning Outcomes

Internship

On successful completion, students will be able to

- apply skills and knowledge they have obtained previously during their study program in an entrepreneurial environment.
- develop his / her practical and analytical skills in order to improve his / her employability.
- have practical knowledge and learn to work within an organization.
- acquire a first deep insight into organizational structures and communication procedures.
- apply communication skills, social skills, problem solving, time and project management which will shape their general management skills.
- shape their personality with the help of the interdisciplinary nature of the course especially in the area of the key qualifications like interpersonal skills or intercultural skills.

Studium Generale I

Course Code: DLBSG01_E

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In the course "Studium Generale I", students deepen their knowledge in a self-selected subject area by completing an IU course outside their applicable curriculum. This gives them the opportunity to look beyond their own subject area and acquire further competencies. The associated option enables students to self-determine their study content to focus even more on issues relevant to them and/or to strengthen or develop selected competencies.

Course Outcomes

On successful completion, students will be able to

- apply acquired key competencies to issues in their field of study and/or in their professional environment.
- to deepen one's own skills and abilities in a self-directed manner.
- to look beyond the boundaries of their own area of expertise.

Contents

- The course "Studium Generale I" offers students the opportunity to take courses outside of their curriculum and the result can be credited as an elective subject. In principle, all IU bachelor courses that fulfill the following requirements are creditable for this purpose:
 - They are not part of an integral part of the applicable mandatory curriculum.
 - They do not have admission requirements or students can prove that they have met the admission requirement.
- The examination of the selected courses must be taken in full and finally passed in order to be credited as part of the 'Studium Generale'.

Module Contents

Certificate Course German

To learn and deepen German as a foreign language at the chosen CEFR level with regard to the respective qualitative aspects of range, correctness, fluency, interaction and coherence. The module includes a combination of listening, comprehension, writing and speaking exercises as well as various course material.

Foreign Language German

To learn and deepen German as a foreign language at the chosen CEFR level with regard to the respective qualitative aspects of range, correctness, fluency, interaction and coherence. The module includes a combination of listening, comprehension, writing and speaking exercises as well as various course material.

Learning Outcomes

Certificate Course German

On successful completion, students will be able to

- meet the qualification objectives according to the chosen level (A1, A2, B1 or B2) according to the criteria of the Common European Framework of Reference for Languages (CEFR).
- use the foreign language German according to a CEFR placement test on the basis of everyday topics, selected areas of specialization and by adapting basic and advanced grammatical structures.

Foreign Language German

On successful completion, students will be able to

- meet the qualification objectives according to the chosen level (A1, A2, B1 or B2) according to the criteria of the Common European Framework of Reference for Languages (CEFR).
- use the foreign language German according to a CEFR placement test on the basis of everyday topics, selected areas of specialization and by adapting basic and advanced grammatical structures.

Certificate Course German

Course Code: DLFSWG01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The qualification objectives correspond to levels A1, A2, B1 and B2 according to the criteria of the Common European Framework of Reference for Languages (CEFR). Using everyday subject areas, chosen areas of specialization, and using basic and advanced grammatical structures, the use of German as a foreign language is taught and practiced according to a CEFR placement test. Upon successful completion, students will receive a certificate corresponding to their chosen level.

Course Outcomes

On successful completion, students will be able to

- meet the qualification objectives according to the chosen level (A1, A2, B1 or B2) according to the criteria of the Common European Framework of Reference for Languages (CEFR).
- use the foreign language German according to a CEFR placement test on the basis of everyday topics, selected areas of specialization and by adapting basic and advanced grammatical structures.

Contents

- Depending on the CEFR placement, students will be proficient
 - to understand and use familiar, everyday expressions and very simple phrases aimed at satisfying concrete needs. They can introduce themselves and others and ask other people questions about themselves - e.g. where they live, what kind of people they know or what kind of things they have - and they can give answers to questions of this kind. They can communicate in a simple way if the person they are talking to speaks slowly and clearly and is willing to help. (Level A1)
 - to understand sentences and frequently used expressions related to areas of immediate importance (e.g. personal and family information, shopping, work, local area). You can communicate in simple, routine situations involving a simple and direct exchange of information about familiar things. You can describe by simple means your own background and education, immediate environment and things related to immediate needs. (Level A2)
 - to understand the main points when clear standard language is used and when it's about familiar things from work, school, leisure, etc. You can handle most situations encountered while traveling in the language area. You can express yourself simply

and coherently on familiar topics and personal areas of interest. You can talk about experiences and events, describe dreams, hopes and goals, and give brief reasons or explanations for plans and opinions. (Level B1)

- to understand the main content of complex texts on concrete and abstract topics; and to understand specialist discussions in their own area of specialization. You can communicate so spontaneously and fluently that a normal conversation with native speakers is quite possible without major effort on either side. You can express yourself clearly and in detail on a wide range of topics, explain a point of view on a topical issue and state the advantages and disadvantages of various options. (Level B2)
- Grammar:
 - Level A1 - present and past tenses, sentence structure, prepositions, etc.
 - Level A2 - among other things tenses of the past, differences in the past tenses, imperative, subordinate clauses, pronouns (dative, accusative)
 - Level B1 - including introduction of past perfect, conjunctions, introduction of passive voice, adverbs, adjectives (difference), future tense
 - Level B2 - among others verb constructions, conditional clauses, indirect speech

Foreign Language French

Course Code: DLFSF01_E

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The qualification objectives correspond to levels A1, A2, B1 and B2 according to the criteria of the Common European Framework of Reference for Languages (CEFR). Using everyday subject areas, chosen areas of specialization, and using basic and advanced grammatical structures, the use of French as a foreign language is taught and practiced according to a CEFR placement test.

Course Outcomes

On successful completion, students will be able to

- meet the qualification objectives according to the chosen level (A1, A2, B1 or B2) according to the criteria of the Common European Framework of Reference for Languages (CEFR).
- use the foreign language French according to a CEFR placement test on the basis of everyday topics, selected areas of specialization and by adapting basic and advanced grammatical structures.

Contents

- Depending on the CEFR placement, students will be proficient
 - to understand and use familiar, everyday expressions and very simple phrases aimed at satisfying concrete needs. They can introduce themselves and others and ask other people questions about themselves - e.g. where they live, what kind of people they know or what kind of things they have - and they can give answers to questions of this kind. They can communicate in a simple way if the person they are talking to speaks slowly and clearly and is willing to help. (Level A1)
 - to understand sentences and frequently used expressions related to areas of immediate importance (e.g. personal and family information, shopping, work, local area). You can communicate in simple, routine situations involving a simple and direct exchange of information about familiar things. You can describe by simple means your own background and education, immediate environment and things related to immediate needs. (Level A2)
 - to understand the main points when clear standard language is used and when it's about familiar things from work, school, leisure, etc. You can handle most situations encountered while traveling in the language area. You can express yourself simply and coherently on familiar topics and personal areas of interest. You can talk about experiences and events, describe dreams, hopes and goals, and give brief reasons or explanations for plans and opinions. (Level B1)

- to understand the main content of complex texts on concrete and abstract topics; and to understand specialist discussions in their own area of specialization. You can communicate so spontaneously and fluently that a normal conversation with native speakers is quite possible without major effort on either side. You can express yourself clearly and in detail on a wide range of topics, explain a point of view on a topical issue and state the advantages and disadvantages of various options. (Level B2)
- Grammar:
 - Level A1 - present and past tenses, sentence structure, prepositions, etc.
 - Level A2 - among other things tenses of the past, differences in the past tenses, imperative, subordinate clauses, pronouns (dative, accusative)
 - Level B1 - including introduction of past perfect, conjunctions, introduction of passive voice, adverbs, adjectives (difference), future tense
 - Level B2 - among others verb constructions, conditional clauses, indirect speech

Module Contents**Foreign Exchange Exposure and Management**

- Foreign Exchange (FX) Markets and Exchange Rate Determination
- International Parity Conditions
- Identification of Corporate Foreign Exchange Risks
- Hedging Techniques

International Investment Appraisal

- Management and Control of International Operations
- Transfer Pricing and Tax Legislation
- Foreign Direct Investment (FDI)

Learning Outcomes**Foreign Exchange Exposure and Management**

On successful completion, students will be able to

- appreciate the challenges of managing MNEs in the context of currency exposure and hedging techniques.
- understand the foreign exchange market and exchange rate determination.
- be able to critically analyze methods to manage foreign exchange exposures of MNEs.

International Investment Appraisal

On successful completion, students will be able to

- assess the challenges of managing MNEs.
- assess the opportunities and implications for MNEs debt and equity capital structures.
- appraise the different types of foreign investment undertaken by MNEs.
- select relevant capital budgeting techniques in the context of MNEs.

Foreign Exchange Exposure and Management

Course Code: LIBFBBAEIF01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The financial management of multinational enterprises (MNEs), i.e., corporations with operations in more than one country whose business is conducted via branches, subsidiaries, or joint-ventures, is quite challenging, particularly in terms of currency risk. This course examines international corporate finance within the context of understanding foreign exchange markets and the management of foreign exchange exposures.

Course Outcomes

On successful completion, students will be able to

- appreciate the challenges of managing MNEs in the context of currency exposure and hedging techniques.
- understand the foreign exchange market and exchange rate determination.
- be able to critically analyze methods to manage foreign exchange exposures of MNEs.

Contents

1. Foreign exchange (FX) markets and exchange rate determination to help understand the key players and their roles and influences on exchange rates as well as the key theories around the determination of exchange rates.
2. International parity conditions looking at impact of inflation on FX rates and the implications from the theory of One Price to relative Purchasing Power Parity for international companies.
3. Identification of corporate foreign exchange risks to help understand the types of exposure (transaction, translation and operating exposures) and to explore strategies MNEs use to manage FX risks.
4. Understand hedging techniques from internal through to external hedging methods and to appreciate why corporations take differing hedging strategies for their exposures.

Literature**Compulsory Reading**

International Investment Appraisal

Course Code: LIBFBBAEIF02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course examines international corporate finance within the context of managing multinational enterprises (MNEs) and controlling international operations, focusing on the global financial environment, financing and investments.

Course Outcomes

On successful completion, students will be able to

- assess the challenges of managing MNEs.
- assess the opportunities and implications for MNEs debt and equity capital structures.
- appraise the different types of foreign investment undertaken by MNEs.
- select relevant capital budgeting techniques in the context of MNEs.

Contents

1. Management and control of international operations looking at constraints on management and understanding shareholder v stakeholder wealth maximization models
2. Sources of debt and equity raising for MNEs in an international context
3. Transfer pricing and tax legislation to understand differences in tax regimes around the world and the implications for multinational companies as well as the ethical implications surrounding transfer pricing and tax minimization methods
4. Foreign Direct Investment (FDI) and international capital budgeting, taking account of the greater complexity of the need to understand wider political risk and tax implications when undertaking financial analysis

Artificial Intelligence

Course Code: DLBDSEAIS01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

The quest for artificial intelligence (AI) has captured humanity's interest for many decades and has been an active research area since the 1960s. This course will give a detailed overview of the historical developments, successes, and set-backs in AI, as well as modern approaches in the development of artificial intelligence. This course gives an introduction to reinforcement learning, a process similar to how humans and animals experience the world: exploring the environment and inferring the best course of action. This course also covers the principles of natural language processing and computer vision, both of which are key ingredients for an artificial intelligence to be able to interact with its environment.

Course Outcomes

On successful completion, students will be able to

- chart the historical developments in artificial intelligence.
- understand the approach of contemporary AI systems.
- comprehend the concepts behind reinforcement learning.
- analyze natural language using basic NLP techniques.
- scrutinize images and their contents.

Contents

1. History of AI
 - 1.1 Historical Developments
 - 1.2 AI Winter
 - 1.3 Expert Systems
 - 1.4 Notable Advances
2. Modern AI Systems
 - 2.1 Narrow versus General AI
 - 2.2 Application Areas
3. Reinforcement Learning
 - 3.1 What is Reinforcement Learning?
 - 3.2 Markov Chains and Value Function

3.3 Time-Difference and Q Learning

4. Natural Language Processing (NLP)

4.1 Introduction to NLP and Application Areas

4.2 Basic NLP Techniques

4.3 Vectorizing Data

5. Computer Vision

5.1 Introduction to Computer Vision

5.2 Image Representation and Geometry

5.3 Feature Detection

5.4 Semantic Segmentation

Project: AI Excellence with Creative Prompting Techniques

Course Code: DLBPKIEKPT01_E

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In this course, students explore the fascinating world of prompting in generative AI applications. They engage in hands-on exercises to create new AI-generated content including text, images, and videos. Through these exercises, students learn how to effectively use, analyze, and evaluate these systems within their respective fields of study.

Course Outcomes

On successful completion, students will be able to

- comprehend and apply basic prompting techniques in generative AI applications.
- analyze and evaluate the effectiveness of the basic prompts.
- apply ethical considerations to the design and use of AI for basic prompting techniques.
- design, implement, and refine effective prompts to real-world scenarios through hands-on exercises.
- showcase creative and innovative thinking in the application of prompting techniques to solve complex problems in their field of studies.

Contents

- In this course, students work on a basic practical implementation of a generative AI use case by choosing from a selection provided in the complementary guideline. The course provides practical examples as learning materials and exercises with basic prompting techniques for open-source text, image, and video generation use cases. The exercises are designed to inspire and guide students in completing their own generative AI use case work, which includes a use case description, chosen prompting techniques, outcomes, and critical evaluations from both technical and ethical perspectives.

Module Contents

Project: Dynamics 365 Business Central - Financial Company Setup

This module empowers students to configure and perform core business processes of a small or medium-sized company in an enterprise resource planning (ERP) system using Microsoft Dynamics 365 Business Central. Therefore, the module will address the core financial setup as well as sales and distribution processes for a small or medium-sized company.

Project: Dynamics 365 Business Central - Business Processes with Focus on Sales and Distribution

This module empowers students to configure and perform core business processes of a small or medium-sized company in an enterprise resource planning (ERP) system using Microsoft Dynamics 365 Business Central. Therefore, the module will address the core financial setup as well as sales and distribution processes for a small or medium-sized company.

Learning Outcomes**Project: Dynamics 365 Business Central - Financial Company Setup**

On successful completion, students will be able to

- describe the core feature of Business Central as an ERP system for small or medium-sized company.
- initially setup Business Central (SaaS).
- configure a new small or medium-sized demo company in Business Central.
- manage core security settings in Business Central.
- configure financials by setting up the finance module in Business Central.
- configure the chart of accounts in Business Central.

Project: Dynamics 365 Business Central - Business Processes with Focus on Sales and Distribution

On successful completion, students will be able to

- configure sales module in Business Central.
- configure purchasing module in Business Central.
- set up inventory management in Business Central.
- configure master data for sales and purchasing in Business Central.
- describe how to perform Business Central operations including selling and purchasing.
- process financial documents.

Project: Dynamics 365 Business Central - Financial Company Setup

Course Code: DLBMSERP01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course aims to empower students to perform financial business processes of a small or medium-sized company using the well-established cloud-based ERP system Microsoft Dynamics 365 Business Central (BC). At first, you will gain important insights into the typical structure of BC. Based on that knowledge, you will be guided to setup a SaaS environment for a demo company in BC. To ensure a safe operation of BC in the cloud you will learn how to configure essential security settings. Next, you will familiarize yourself with the most important and common financial business processes for a small or medium-sized business. Finally, you will configure the accounting module for your demo company in BC.

Course Outcomes

On successful completion, students will be able to

- describe the core feature of Business Central as an ERP system for small or medium-sized company.
- initially setup Business Central (SaaS).
- configure a new small or medium-sized demo company in Business Central.
- manage core security settings in Business Central.
- configure financials by setting up the finance module in Business Central.
- configure the chart of accounts in Business Central.

Contents

- Embarking on the journey of utilizing BC involves a series of pivotal steps. It commences with the fundamental task of setting up the platform itself. This encompasses the creation and meticulous configuration of a company, including the setup of security settings to ensure a secure operational environment. The process further extends to establishing the core functionality, which serves as the backbone of operations. The inclusion of dimensions adds an additional layer of precision to data handling. A critical aspect of the BC framework lies in managing approvals seamlessly through the implementation of workflows, streamlining processes and enhancing efficiency. Within the finance module, a thorough configuration is undertaken. This involves the setup of financial management procedures, which ensures the financial aspect of operations is well-structured and organized. Part of this process includes the establishment of the chart of accounts, providing a foundation for accurate

financial tracking. Moreover, the setup of posting groups refines the financial recording process, facilitating precise categorization. The establishment of journals and bank accounts enhances financial transparency, offering a clear overview of monetary transactions. Notably, payable accounts are configured, ensuring seamless management of outgoing payments. Similarly, the setup of receivable accounts streamlines the handling of incoming payments. Collectively, these steps form a comprehensive roadmap to unleash the full potential of BC, enabling efficient operations and meticulous financial management.

Project: Dynamics 365 Business Central - Business Processes with Focus on Sales and Distribution

Course Code: DLBMSERP02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	DLBMSERP01

Course Description

This course aims to empower students to perform sales and distribution processes using the well-established cloud-based ERP system Microsoft Dynamics 365 Business Central (BC). At first, you will gain important insights into the configuration of the sales module for a small or medium-sized company. Based on that knowledge, you will be guided to setup the purchasing module and inventory management in BC. Next, you will familiarize yourself with the configuration of the corresponding master data management. Finally, you will perform common business transaction in the sales and distribution module as well as process core financial documents for your demo company in BC.

Course Outcomes

On successful completion, students will be able to

- configure sales module in Business Central.
- configure purchasing module in Business Central.
- set up inventory management in Business Central.
- configure master data for sales and purchasing in Business Central.
- describe how to perform Business Central operations including selling and purchasing.
- process financial documents.

Contents

- To ensure the smooth flow of business processes in BC, various steps are necessary. First, the configuration of the sales and purchases modules takes place to establish the foundation for efficient work. During this phase, inventory management is set up to ensure an organized inventory flow. An essential step is configuring master data for sales and purchasing, as these form the basis for all subsequent activities. Prices and discounts are also established to create a clear pricing structure. Following this, common operations are performed in Business Central, encompassing both basic tasks and frequent operations. The processing of purchases as well as the handling of sales transactions is a central part of the process and a common operation in BC. Financial documents are processed as well to accurately represent the accounting aspect. Another step involves processing payments and journal entries to meticulously manage the financial aspects. All of these steps contribute to the seamless execution of business activities while maintaining financial integrity.

Module Contents**Project: SAP S/4HANA - Financial Company Setup incl. Human Capital Management**

This module empowers students to configure and perform core business processes of medium-sized and large companies in an enterprise resource planning (ERP) system using SAP S/4HANA and the user interface SAP Fiori. The module consists of two steps, each catering to specific facets. In the first step, attention is directed towards the core financial setup as well as the preliminary configuration of the Human Capital Management module using a demo company as an illustration. This step lays down a robust foundation in these domains. Moving on to the second step, the focus shifts to expanding the initial setup by integrating business processes related to sales, distribution, and production.

Project: SAP S/4HANA - Business Processes**Learning Outcomes****Project: SAP S/4HANA - Financial Company Setup incl. Human Capital Management**

On successful completion, students will be able to

- navigate confidently within the SAP S/4HANA ERP system.
- explain the organizational structures.
- understand the concept of master data.
- explain financial accounting (FI) module.
- explain management accounting (CO) module.
- explain the employee master data record (HCM).

Project: SAP S/4HANA - Business Processes

On successful completion, students will be able to

- describe the source to pay business process (MM).
- describe warehouse management systems (WM).
- explain the design to operate business process (PP).
- describe the order to cash business process (SD).
- create a project structure (PS).
- defining the organizational levels used in enterprise asset management (EAM).

Project: SAP S/4HANA - Financial Company Setup incl. Human Capital Management

Course Code: DLBSAPBPI01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

This course aims to empower students to perform financial business processes of medium-sized and large companies using the well-established ERP system SAP S/4HANA (S4H). At first, you will gain important insights into the typical organizational structure and navigation within S4H. You will understand the new user experience concept of SAP Fiori. Based on that knowledge, you will get in contact with the concept of master data in S4H. Next, you will familiarize yourself with the most important and common financial business processes in the financial accounting (FI) and management accounting (CO) module of S4H. Finally, you will configure the employee master data record in the Human Capital Management (HCM) module of S4H.

Course Outcomes

On successful completion, students will be able to

- navigate confidently within the SAP S/4HANA ERP system.
- explain the organizational structures.
- understand the concept of master data.
- explain financial accounting (FI) module.
- explain management accounting (CO) module.
- explain the employee master data record (HCM).

Contents

- The course provides a comprehensive introduction into SAP S/4HANA starting with the overall SAP S/4HANA Enterprise Management: Overview. Therefore, the course offers a comprehensive and presentation of various key concepts and functions relevant in the world of SAP S/4HANA. Furthermore, it focuses on the new user experience brought by SAP Fiori UX. The course covers the basics of SAP S/4HANA as well as the various organizational structures that exist within this system. A central concept addressed is that of master data. The subjects of Financial Accounting and Management Accounting (Record-to-Report processing) are thoroughly examined, providing an overview. Within these areas, Financial Accounting (FI) is explained, and Management Accounting (CO) is illuminated further. The integration between FI and CO is also outlined. The fundamentals of Financial Accounting and Management Accounting (Record-to-Report processing) are further delved into. This includes the definitions of General Ledger (G/L) accounts and cost elements, as well as

the definition of cost centers. Step-by-step instructions for posting G/L account documents and handling business partners and invoices are conveyed. The management of Asset Accounting, Activity Types, and Internal Orders is also comprehensively explained. The course also addresses the realm of Human Capital Management (HCM). This covers organizational management in HCM, as well as the significance of HCM master data. Another important aspect is the integration with SAP Success Factors.

Project: SAP S/4HANA - Business Processes

Course Code: DLBSAPBPI02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	DLBSAPBPI01

Course Description

This course aims to empower students to perform sales and distribution processes of medium-sized and large companies using the well-established ERP system SAP S/4HANA (S4H). At first, you will gain important insights into the configuration of the purchasing (MM) and warehouse management (WM) module within S4H. You will also understand the production process (PP) of S4H. Based on that knowledge, you will get in contact with the lead to cash business process (SD) in S4H. Next, you will familiarize yourself with the project system (PS) in S4H while creating project steps and structures. Finally, you will define the organizational levels and for the management and maintenance of the company's physical assets in the enterprise asset management (EAM) module of S4H.

Course Outcomes

On successful completion, students will be able to

- describe the source to pay business process (MM).
- describe warehouse management systems (WM).
- explain the design to operate business process (PP).
- describe the order to cash business process (SD).
- create a project structure (PS).
- defining the organizational levels used in enterprise asset management (EAM).

Contents

- The course covers a wide range of processes and concepts within SAP S/4HANA: Purchase to Pay Processing in SAP S/4HANA: Exploring the Purchase to Pay business process, including the definition of master data involved. This encompasses creating vendor master records, listing vendor-specific master data records, generating purchase requisitions, crafting purchase orders, posting goods receipts for purchase orders, and managing vendor invoices. The automatic payment run process is also elucidated. Warehouse Management - Stock Transfer: This section delves into Warehouse Management (WM) structures and usage, highlighting the distinctions between Extended Warehouse Management (EWM), WM, and Inventory Management (IM). The process of handling stock transfer orders is outlined. Plan to Produce Business Process in SAP S/4HANA: Understanding the Plan to Produce process within SAP S/4HANA, which encompasses defining master data, creating product cost estimates, planning product demand through integrated planning, establishing Material Requirements Planning (MRP) processes, and executing advanced planning. Advanced

Planning - Describing the Manufacturing Business Process: Exploring the manufacturing business process, starting from the creation and release of production orders to material withdrawal, order confirmation, materials goods receipt, and period-end closing activities. Order to Cash Processing in SAP S/4HANA: This section focuses on the Order to Cash business process, describing the master data used in sales and distribution. The process involves creating customer master records, setting up condition records, processing sales orders, managing delivery documents, generating customer invoices, and handling related activities. Project System (PS): Detailing the steps within Project System, including creating project structures, project planning, budgeting, project execution, and concluding with period-end closing activities. SAP Enterprise Asset Management (EAM): Covering the business steps in SAP EAM, describing the master data utilized, creating notifications, processing maintenance orders, executing maintenance tasks, and wrapping up with period-end closing activities.

- Employment Search

Personal Elevator Pitch

Through the application of self-reflection, self-awareness based on relevant career success parameters students should develop career goals, career stages, and their career strategy. Taking into account their current professional and/or study situation, the central elements of a short-, and medium-term career planning are worked out by the students for their individual case. At the end of the course, students will be able to present their personal elevator pitch and communicate it in a proper way that is appropriate for the target group or audience. In this way, they will reflect on their current professional situation. The personal elevator pitch, being at hear of personal branding, supports the conveyance of this vision during personal networking activities.

Learning Outcomes

Personal Career Plan

On successful completion, students will be able to

- understand, apply, and reflect presented career theory and models with regard to their personal situation to arrive at a concept or picture of a desired career.
- understand and critically reflect the concept of career and career planning.
- understand the relevance of a strategically oriented career planning.
- understand the importance of and conduct a personal assessment to identify one's personality, values, motivation, strengths, competencies, skills, and interests.
- understand the necessity of building and maintaining their own personal brand.
- understand differing job search processes across national/international contexts, and to create context-sensitive job applications accordingly.
- understand the principles of global careers and how to effectively act in international environments.

Personal Elevator Pitch

On successful completion, students will be able to

- identify their career goals, career stages, and the personal status quo with regard to their achievement.
- reflect their current situation and define where they want to aim.
- develop a career strategy by creating personal career goals and a coherent action plan.
- understand and apply the process of building a personal brand.
- define their identity, skills, profession, reasons to believe and necessary investments.
- identify their personal strengths and their core driver.
- understand the power of effective communication, networking, and storytelling.
- understand the principles and apply the process of designing a strong personal elevator pitch.
- critically reflect and adapt their personal elevator pitch to the specificities of the context, audience, target group, and way of delivery.

Course Description

In today's complex and ever-changing environment, the forms of careers vary depending on the context, understanding of values, and market dynamics. The 'classic career ladder' that one is climbing being the only predominant form of career is long outdated, and individuals are being confronted with a great number of opportunities regarding industry or job choice and working arrangements. Considering the great variety of options especially for well-educated individuals, has become more important than ever to make informed decisions. This course is designed to support students maneuvering themselves through these complexities of their personal career plan, whereby self-awareness, self-reflection, and goal-setting are important elements of this process. Guided by central elements of career theory, career models, and research outcomes, students will be given tools and reflection exercises to arrive at a solid, directly applicable strategy to further steer their professional progress and career steps.

Course Outcomes

On successful completion, students will be able to

- understand, apply, and reflect presented career theory and models with regard to their personal situation to arrive at a concept or picture of a desired career.
- understand and critically reflect the concept of career and career planning.
- understand the relevance of a strategically oriented career planning.
- understand the importance of and conduct a personal assessment to identify one's personality, values, motivation, strengths, competencies, skills, and interests.
- understand the necessity of building and maintaining their own personal brand.
- understand differing job search processes across national/international contexts, and to create context-sensitive job applications accordingly.
- understand the principles of global careers and how to effectively act in international environments.

Personal Elevator Pitch

Course Code: DLBKAENT02_E

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	DLBKAENT01_E

Course Description

The forms of careers vary depending on the context or personal preferences in today's ever-changing, demanding, and complex environment. Changes in the environment, as for example technology, sustainability, and the rise of artificial intelligence, push individuals to take career transitions into their own hands. Personal endeavors to develop one's career through the acquisition of, for instance, new projects, jobs, or employers, require the right strategies to be successful. Contacts through targeted networking and the development of one's own brand play a special role here. Evenly so for individuals starting their careers after having accomplished their education, effective networking is key to career entry and development in these turbulent times. In addition, personal branding is a concept that not only has gained relevance in research but is also widely used in career counseling. Developing and conveying a personal brand is central to this course. Using the personal branding approach during networking activities, individuals can actively contribute to their career success.

Course Outcomes

On successful completion, students will be able to

- identify their career goals, career stages, and the personal status quo with regard to their achievement.
- reflect their current situation and define where they want to aim.
- develop a career strategy by creating personal career goals and a coherent action plan.
- understand and apply the process of building a personal brand.
- define their identity, skills, profession, reasons to believe and necessary investments.
- identify their personal strengths and their core driver.
- understand the power of effective communication, networking, and storytelling.
- understand the principles and apply the process of designing a strong personal elevator pitch.
- critically reflect and adapt their personal elevator pitch to the specificities of the context, audience, target group, and way of delivery.

Contents

- The core element of this course is a personal elevator pitch with the use of a personal branding canvas. The creation of a personal brand is not only relevant for self-employed freelancers or entrepreneurs but is as well helpful for individuals who strive for their own further development on the career ladder within their organization or for those who

are seeking employment. Having understood the characteristics of and reasoning behind personal branding and the underlying process, students will be able to apply this process to their own person and situation.

- Self-awareness being the main 'ingredient' for an effective personal brand, students will be encouraged to go on an intensive self-reflection journey to deepen their understanding of their identity, skills, profession, and reasons to believe for a personal brand, and subsequently, for a personal elevator pitch.
- Being at the heart of and the essence of personal branding, the elevator pitch enables individuals to impactfully present themselves in a nutshell to important individuals and potential employers. Having understood the principles and key success factors characterizing an elevator pitch, students will be able to develop their own one. They will learn to consider aspects like timing, benefit, clear positioning, target audience through an oral form of delivery. In addition, the role of communication, networking and storytelling principles will be highlighted.
- Knowledge of the core elements and success factors of the personal elevator pitch within the framework of the individual career development.

Module Contents

- Fundamentals of IT Security
- Data Protection
- IT Security Management
- Network and Communication Security

Learning Outcomes**Introduction to Data Protection and Cyber Security**

On successful completion, students will be able to

- explain the terms and concepts of IT security and know the typical procedures and techniques which exist in each area.
- cite the legal regulations on data protection and explain their implementation.
- discuss in-depth IT security management and suitable measures for implementation.
- use their overview knowledge of activities and strategies for IT security in software and system development.

Introduction to Data Protection and Cyber Security

Course Code: DLBCSIDPITS01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

In this course, the students are familiarized with important concepts from the field of IT security. Basic terms are introduced and discussed, and typical application fields, areas of IT security application, and typical procedures and techniques are introduced and described.

Course Outcomes

On successful completion, students will be able to

- explain the terms and concepts of IT security and know the typical procedures and techniques which exist in each area.
- cite the legal regulations on data protection and explain their implementation.
- discuss in-depth IT security management and suitable measures for implementation.
- use their overview knowledge of activities and strategies for IT security in software and system development.

Contents

1. Fundamentals of Data Protection and Cyber Security
 - 1.1 Conceptual Bases, Protection Goals
 - 1.2 Attacks and Threats
 - 1.3 Security Strategy
 - 1.4 Legal Regulations
2. Data Protection
 - 2.1 Data Protection as a Personal Right
 - 2.2 Basic Principles of Data Protection
 - 2.3 EU General Data Protection Regulation
 - 2.4 Further International Regulations on Data Protection
 - 2.5 Cross-Border Data Flow
 - 2.6 Data Protection in Everyday Life
3. Basic Functions of Cyber Security and Their Implementation
 - 3.1 Identification and Authentication
 - 3.2 Rights Management

- 3.3 Rights Check
- 3.4 Preservation of Evidence
- 4. Cyber Security Management
 - 4.1 Basic Concepts and Standards in Cyber Security Management
 - 4.2 Series of Standards ISO 2700x
- 5. Cyber Security Management in Everyday Life
 - 5.1 Password Management
 - 5.2 Data Backup
 - 5.3 Email Security
 - 5.4 Protection Against Viruses and Other Malware
 - 5.5 Protection Against Social Engineering Attacks
- 6. Network and Communication Security
 - 6.1 Firewall Technology
 - 6.2 Network Separation
 - 6.3 Security in WLAN, Mobile Networks, Bluetooth, and NFC
- 7. Cyber Security in the Development of Software and Systems
 - 7.1 Protection of the Development Environment
 - 7.2 Secure Development
 - 7.3 Common Criteria

Model Engineering

Course Code: DLBDSME01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		5	none

Course Description

Building high-quality predictive models is one of the core competencies of data scientists. This course begins with an introduction to relevant data science approaches such as CRISP-DM and Microsoft Team Data Science. The following section on model building focuses on the best practices that allow data scientists to build enterprise-grade models. Subsequent chapters explore techniques for model validation and model combination, also known as ensemble learning. Traditionally, the most explainable models have not been very powerful, and the most powerful models have not been very explainable. Nevertheless, interpretable models—and interpretable machine learning models in particular—are highly desirable in many areas. This course gives a detailed overview of common approaches, such as surrogate model visualizations, which illustrate the behavior of the models.

Course Outcomes

On successful completion, students will be able to

- understand common data science methodologies.
- create benchmark models.
- analyze models with respect to their interpretability.
- apply model validation techniques.
- recall established model combination techniques.

Contents

1. Data Science Methodologies
 - 1.1 CRISP-DM
 - 1.2 MS Team Data Science
2. Model Building
 - 2.1 Establishing a benchmark model
 - 2.2 Workflow automation
 - 2.3 Model persistence and model versioning
3. Model Evaluation
 - 3.1 Under- and overfitting
 - 3.2 Cross validation

4. Interpretable models
 - 4.1 Why interpretable models?
 - 4.2 Black-box versus interpretable models
 - 4.3 Visualizers for convolutional neural networks
 - 4.4 Surrogate models
5. Combining Learning Models
 - 5.1 Bagging
 - 5.2 Boosting
 - 5.3 Model stacking

Bachelor Thesis

Course Code: DLBBT01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		9	none

Course Description

The aim and purpose of the bachelor's thesis is to successfully apply the subject-specific and methodological competencies acquired during the course of study in the form of an academic dissertation with a thematic reference to the major field of study. The content of the bachelor's thesis can be a practical-empirical or theoretical-scientific problem. Students should prove that they can independently analyze a selected problem with scientific methods, critically evaluate it, and work out proposed solutions under the subject-methodological guidance of an academic supervisor. The topic chosen by the student from their respective field of study should meet the acquired scientific competences, deepening their academic knowledge and skills in order to meet the future needs of the field.

Course Outcomes

On successful completion, students will be able to

- work on a problem from their major field of study by applying the specialist and methodological skills they have acquired during their studies.
- independently analyze selected tasks with scientific methods, critically evaluate them, and develop appropriate solutions under the guidance of an academic supervisor.
- record and analyze existing (research) literature appropriate to the topic of their bachelor's thesis.
- prepare a detailed written elaboration in compliance with scientific methods.

Contents

- The bachelor's thesis must be written on a topic that relates to the content of the respective major field of study. In the context of the bachelor's thesis, the problem, as well as the scientific research goal, must be clearly emphasized. The work must reflect the current state of knowledge of the topic to be examined by means of an appropriate literature analysis. The student must prove their ability to use the acquired knowledge theoretically and/or empirically in the form of an independent and problem-solution-oriented application.

Colloquium

Course Code: DLBBT02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
BA	English		1	none

Course Description

The colloquium will take place after the submission of the bachelor's thesis. This is done at the invitation of the experts. During the colloquium, students must prove that they have independently produced the content and results of the written work. The content of the colloquium is a presentation of the most important work contents and research results by the student as well as the answering of questions by experts.

Course Outcomes

On successful completion, students will be able to

- present a problem from their field of study using academic presentation and communication techniques.
- reflect on the scientific and methodological approach chosen in their bachelor's thesis.
- demonstrate that they can actively answer subject-related questions from the subject experts (reviewers of the bachelor's thesis).

Contents

- The colloquium includes a presentation of the most important results of the bachelor's thesis, followed by the student answering the reviewers' technical questions.

Literature

Compulsory Reading

Further Reading

- Subject specific literature chosen by the student
