### Module Contents

- Introduction to statistics
- Important probability distributions and their applications
- Bayesian statistics
- Descriptive statistics
- Data visualization
- Parameter estimation
- Hypothesis tests

**Learning Outcomes****Advanced Statistics**

On successful completion, students will be able to

- understand the fundamental building blocks of statistics.
- analyze stochastic data in terms of the underlying probability distributions.
- utilize Bayesian statistics techniques.
- summarize the properties of observed data using descriptive statistics.
- apply data visualization techniques to design graphics that illustrate the behavior of observed data.
- evaluate model parameters using parameter estimation techniques.
- create hypothesis tests to discriminate between several model classes.

# Advanced Statistics

Course Code: DLMDSAS01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDSAM01

## Course Description

Nearly all processes in nature and technical or scientific scenarios are not deterministic but stochastic. Therefore, these processes must be described in terms of probabilities and probability density distributions. After defining and introducing the fundamental concepts of statistics, the course will cover important probability distributions and their prevalence in application scenarios; discuss descriptive techniques to summarize and visualize data effectively; and discuss the Bayesian approach to statistics. Estimating parameters is a key ingredient in optimizing data models, and the course will give a thorough overview of the most important techniques. Hypothesis testing is a crucial aspect in establishing the observation of new effects and determination of the significance of statistical effects. Special focus will be given to the correct interpretation of p-Values and the correct procedure for multiple hypothesis tests.

## Course Outcomes

On successful completion, students will be able to

- understand the fundamental building blocks of statistics.
- analyze stochastic data in terms of the underlying probability distributions.
- utilize Bayesian statistics techniques.
- summarize the properties of observed data using descriptive statistics.
- apply data visualization techniques to design graphics that illustrate the behavior of observed data.
- evaluate model parameters using parameter estimation techniques.
- create hypothesis tests to discriminate between several model classes.

## Contents

1. Introduction to Statistics
  - 1.1 Random Variables
  - 1.2 Kolmogorov Axioms
  - 1.3 Probability Distributions
  - 1.4 Decomposing probability distributions
  - 1.5 Expectation Values and Moments
  - 1.6 Central Limit Theorem
  - 1.7 Sufficient Statistics
  - 1.8 Problems of Dimensionality

- 1.9 Component Analysis and Discriminants
2. Important Probability Distributions and their Applications
  - 2.1 Binomial Distribution
  - 2.2 Gauss or Normal Distribution
  - 2.3 Poisson and Gamma-Poisson Distribution
  - 2.4 Weibull Distribution
3. Bayesian Statistics
  - 3.1 Bayes' Rule
  - 3.2 Estimating the Prior, Benford's Law, Jeffry's Rule
  - 3.3 Conjugate Prior
  - 3.4 Bayesian & Frequentist Approach
4. Descriptive Statistics
  - 4.1 Mean, Median, Mode, Quantiles
  - 4.2 Variance, Skewness, Kurtosis
5. Data Visualization
  - 5.1 General Principles of Dataviz/Visual Communication
  - 5.2 1D, 2D Histograms
  - 5.3 Box Plot, Violin Plot
  - 5.4 Scatter Plot, Scatter Plot Matrix, Profile Plot
  - 5.5 Bar Chart
6. Parameter Estimation
  - 6.1 Maximum Likelihood
  - 6.2 Ordinary Least Squares
  - 6.3 Expectation Maximization (EM)
  - 6.4 Lasso and Ridge Regularization
  - 6.5 Propagation of Uncertainties
7. Hypothesis Test
  - 7.1 Error of 1st and 2nd Kind
  - 7.2 Multiple Hypothesis Tests
  - 7.3 p-Value

# Use Case and Evaluation

Course Code: DLMDSUCE01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		5	none

## Course Description

The evaluation and definition of use cases is the fundamental groundwork from which the projects can be defined. This does not only include the scope and technical requirements of a project but also how value can be derived from the project. A crucial aspect is the definition of what makes a project successful, both in terms of a technical evaluation as well as a business centric perspective and how the status quo can be monitored effectively during the progress of a project. The course also discusses how to avoid common fallacies and understand the implications of introducing data-driven decisions into traditional management structures.

## Course Outcomes

On successful completion, students will be able to

- analyze use cases and their requirements regarding the project objectives.
- apply common metrics to evaluate predictions.
- evaluate key performance indicators to assess projects from a business perspective.
- create monitoring tools that can be used to constantly evaluate the status quo of a project.
- understand common fallacies and how to avoid them.

## Contents

1. Use Case Evaluation
  - 1.1 Identification of Use Cases
  - 1.2 Specifying Use Case Requirements
  - 1.3 Data Sources and Data Handling Classification
2. Model-centric Evaluation
  - 2.1 Common Metrics for Regression and Classification
  - 2.2 Visual Aides
3. Business-centric Evaluation
  - 3.1 Cost Function and Optimal Point Estimators
  - 3.2 Evaluation Using KPIs
  - 3.3 A/B Test
4. Monitoring

- 4.1 Visual Monitoring Using Dashboards
- 4.2 Automated Reporting and Alerting
5. Avoiding Common Fallacies
  - 5.1 Cognitive Biases
  - 5.2 Statistical Effects
  - 5.3 Change Management: Transformation to a Data-driven Company

### Module Contents

In this module, students will reflect on current developments in data science. To this end, pertinent topics will be introduced via articles, that are then critically evaluated by the students in the form of a written essay.

**Learning Outcomes****Seminar: Current Topics in Data Science**

On successful completion, students will be able to

- identify current research trends and topics in data science.
- outline a selected topic in the form of a written essay.
- explain relevant assumptions and design choices pertaining to the topic of choice.
- relate the chosen topic to comparable approaches.
- name and describe potential applications for the chosen topic's concepts.

## Seminar: Current Topics in Data Science

Course Code: DLMDSSCTDS01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		5	none

### Course Description

The theory and applications of data science are constantly evolving, with new models and model variations being proposed at a steady rate. Innovative methodological approaches as well as fresh application possibilities are also being continuously developed. This course aims to familiarize the students with the current trends in this rapidly-changing environment. The students learn to independently analyze selected topics and case studies and link them with well-known concepts, as well as critically question and discuss them.

### Course Outcomes

On successful completion, students will be able to

- identify current research trends and topics in data science.
- outline a selected topic in the form of a written essay.
- explain relevant assumptions and design choices pertaining to the topic of choice.
- relate the chosen topic to comparable approaches.
- name and describe potential applications for the chosen topic's concepts.

### Contents

- The seminar covers current topics in data science. Each participant must write a seminar paper on a topic assigned to him/her.

# Machine Learning

Course Code: DLMDSML01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDSAM01, DLMDSPWP01

## Course Description

Machine learning is a field of scientific study concerned with algorithmic techniques that enable machines to learn performance on a given task via the discovery of patterns or regularities in exemplary data. Consequently, its methods commonly draw upon a statistical basis in conjunction with the computational capabilities of modern computing hardware. This course aims to acquaint the student with the main branches of machine learning and provide a thorough introduction to the most widely used approaches and methods in this field.

## Course Outcomes

On successful completion, students will be able to

- know different machine learning model classes.
- comprehend the difference between supervised, unsupervised, and reinforcement learning methods.
- understand common machine learning models.
- analyze trade-offs in the application of different models.
- appropriately choose machine learning models according to a given task.

## Contents

1. Introduction to Machine Learning
  - 1.1 Regression & Classification
  - 1.2 Supervised & Unsupervised Learning
  - 1.3 Reinforcement Learning
2. Clustering
  - 2.1 Introduction to clustering
  - 2.2 K-Means
  - 2.3 Expectation Maximization
  - 2.4 DBScan
  - 2.5 Hierarchical Clustering
3. Regression
  - 3.1 Linear & Non-linear Regression

- 3.2 Logistic Regression
- 3.3 Quantile Regression
- 3.4 Multivariate Regression
- 3.5 Lasso & Ridge Regression
4. Support Vector Machines
  - 4.1 Introduction to Support Vector Machines
  - 4.2 SVM for Classification
  - 4.3 SVM for Regression
5. Decision Trees
  - 5.1 Introduction to Decision Trees
  - 5.2 Decision Trees for Classification
  - 5.3 Decision Trees for Regression
6. Genetic Algorithms
  - 6.1 Introduction to Genetic Algorithms
  - 6.2 Applications of Genetic Algorithms

# Deep Learning

Course Code: DLMDSDL01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDSAM01, DLMDSPWP01, DLMDSML01

## Course Description

Neural networks and deep learning approaches have revolutionized the fields of data science and artificial intelligence in recent years, and applications built on these techniques have reached or surpassed human performance in many specialized applications. After a short review of the origins of neural networks and deep learning, this course will cover the most common neural network architectures and discuss in detail how neural networks are trained using dedicated data samples, avoiding common pitfalls such as overtraining. The course includes a detailed overview of alternative methods to train neural networks and further network architectures which are relevant in a wide range of specialized application scenarios.

## Course Outcomes

On successful completion, students will be able to

- comprehend the fundamental building blocks of neural networks.
- understand concepts in deep learning.
- analyze the relevant deep learning architecture in a wide range of application scenarios.
- create deep learning models.
- utilize alternative methods to train deep learning models.

## Contents

1. Introduction to Neural Network and Deep Learning
  - 1.1 The Biological Brain
  - 1.2 Perceptron and Multi-Layer Perceptrons
2. Network Architectures
  - 2.1 Feed-Forward Networks
  - 2.2 Convolutional Networks
  - 2.3 Recurrent Networks, Memory Cells and LSTMs
3. Neural Network Training
  - 3.1 Weight Initialization and Transfer Function
  - 3.2 Backpropagation and Gradient Descent
  - 3.3 Regularization and Overtraining

4. Alternative Training Methods
  - 4.1 Attention
  - 4.2 Feedback Alignment
  - 4.3 Synthetic Gradients
  - 4.4 Decoupled Network Interfaces
5. Further Network Architectures
  - 5.1 Generative Adversarial Networks
  - 5.2 Autoencoders
  - 5.3 Restricted Boltzmann Machines
  - 5.4 Capsule Networks
  - 5.5 Spiking Networks

## Case Study: Model Engineering

Course Code: DLMDSME01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDSAM01, DLMDASAS01, DLMDSPWP01, DLMDSML01, DLMSDL01

### Course Description

The construction of data science models and applying the techniques to real-world problems requires a deep understanding of data science processes and techniques beyond the application of relevant algorithms. This course starts by introducing two commonly used data science methodologies: CRISP-DM and MS Team Data Science. Any data taken from real machines, systems, or processes will include some errors to varying degrees. This course discusses in detail how to detect and correct data quality issues, including the importance of domain knowledge in the determination of the veracity of the data. Many machine learning approaches require the creation and subsequent selection of model features which determine which part of the data are used in which way in the later modelling step. This course discusses methods to engineer and build new features from raw data and outlines statistical methods to identify the most relevant features for the given task. Finally, this course outlines strategies to avoid common fallacies when building data science models, as well as approaches to automate workflows.

### Course Outcomes

On successful completion, students will be able to

- understand current data science methodologies.
- devaluate the quality of the data used in data science projects.
- create new features from raw data.
- apply feature selection techniques.
- make predictive models using data science techniques.
- identify common fallacies and know how to avoid them.

### Contents

1. Data Science Methodologies
  - 1.1 CRISP-DM
  - 1.2 MS Team Data Science
2. Data Quality
  - 2.1 Evaluating data quality
  - 2.2 Using low quality data
  - 2.3 Data duality and domain knowledge

3. Feature Engineering
  - 3.1 Building new features
  - 3.2 Splitting variables
  - 3.3 Feature engineering exploiting domain knowledge
4. Feature Selection
  - 4.1 Univariate feature selection
  - 4.2 Model based feature selection
5. Building a Predictive Model
  - 5.1 Establishing a benchmark model
  - 5.2 Prediction as probabilities
  - 5.3 Interpretable machine learning and results
6. Avoiding Common Fallacies
  - 6.1 Overtraining & generalization
  - 6.2 Overfitting & Occam's Razor
  - 6.3 Workflow automation and model persistence

### Module Contents

#### Big Data Technologies

- Data types and data sources
- Databases
- Modern storage frameworks
- Data formats
- Distributed computing

#### Software Engineering for Data Intensive Sciences

- Agile project management
- DevOps
- Software development
- API
- From model to production

### Learning Outcomes

#### Big Data Technologies

On successful completion, students will be able to

- identify different types and sources of data.
- understand different database concepts.
- learn to build new database structures.
- evaluate various data storage frameworks w.r.t. project requirements.
- analyze which data format to use for a given project.
- understand what roles you could take in such projects.
- create a distributed computing environment for a given project.
- understand the ethical impact of big data technology choices.

#### Software Engineering for Data Intensive Sciences

On successful completion, students will be able to

- understand the agile approaches Scrum and Kanban.
- explain how DevOps brings software development and operations together into one team.
- write high-quality code using relevant software development techniques.
- evaluate the requirements for APIs.
- create APIs for software applications.
- identify the challenges of bringing a model into production.

# Big Data Technologies

Course Code: DLMDSBDT01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		5	none

## Course Description

Data are often considered the “new oil”, the raw material from which value is created. To harness the power of data, the data need to be stored and processed on a technical level. This course introduces the four “Vs” of data, as well as typical data sources and types. This course then discusses how data are stored in databases. Particular focus is given to database structures and different types of databases, e.g., relational, noSQL, NewSQL, and time-series. Beyond classical and modern databases, this course covers a wide range of storage frameworks such as distributed filesystems, streaming, and query frameworks. This is complemented by a detailed discussion of data storage formats ranging from classical approaches such as CSV and HDF5 to more modern approaches like Apache Arrow and Parquet. Finally, this course gives an overview of distributed computing environments based on local clusters, cloud computing facilities, and container-based approaches.

## Course Outcomes

On successful completion, students will be able to

- identify different types and sources of data.
- understand different database concepts.
- learn to build new database structures.
- evaluate various data storage frameworks w.r.t. project requirements.
- analyze which data format to use for a given project.
- understand what roles you could take in such projects.
- create a distributed computing environment for a given project.
- understand the ethical impact of big data technology choices.

## Contents

1. Data Types and Data Sources
  - 1.1 The 4Vs of data: volume, velocity, variety, veracity
  - 1.2 Data sources
  - 1.3 Data types
2. Databases
  - 2.1 Database structures
  - 2.2 Introduction to SQL

- 2.3 Relational databases
- 2.4 nonSQL, NewSQL databases
- 2.5 Timeseries DB
3. Modern data storage frameworks
  - 3.1 Distributed Filesystems
  - 3.2 Streaming frameworks
  - 3.3 Query frameworks
4. Data formats
  - 4.1 Traditional data exchange formats
  - 4.2 Apache Arrow
  - 4.3 Apache Parquet
5. Distributed Computing
  - 5.1 Cluster-based approaches
  - 5.2 Containers
  - 5.3 Cloud-based approaches

# Software Engineering for Data Intensive Sciences

Course Code: DLMDSSSEDIS01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		5	DLMDSPWP01

## Course Description

Building a successful data-based product requires a significant amount of high-quality code which needs to run in a professional production environment. This course starts by introducing the agile approaches Scrum and Kanban and then discusses the shift from more traditional software development approaches to the DevOps culture. Special focus is given to the discussion and understanding of techniques and approaches for producing high-quality code such as unit and integration testing, test-driven development, pair programming, and continuous delivery and integration. Since many software artefacts are accessed via APIs, this course introduces concepts of API design and paradigms. Finally, this course addresses the challenges of bringing code into a production environment, building a scalable environment, and using cloud-based approaches.

## Course Outcomes

On successful completion, students will be able to

- understand the agile approaches Scrum and Kanban.
- explain how DevOps brings software development and operations together into one team.
- write high-quality code using relevant software development techniques.
- evaluate the requirements for APIs.
- create APIs for software applications.
- identify the challenges of bringing a model into production.

## Contents

1. Agile Project Management
  - 1.1 Introduction to SCRUM
  - 1.2 Introduction to Kanban
2. DevOps
  - 2.1 Traditional lifecycle management
  - 2.2 Bringing development and operations together
  - 2.3 Impact of team structure
  - 2.4 Building a DevOps infrastructure
3. Software Development
  - 3.1 Unit & integration test, performance monitoring

- 3.2 Test-driven development & pair programming
- 3.3 Continuous delivery & integration
- 3.4 Overview of relevant tools
- 4. API
  - 4.1 API design
  - 4.2 API paradigms
- 5. From Model to Production
  - 5.1 Building a scalable environment
  - 5.2 Model versioning and persistence
  - 5.3 Cloud-based approaches

# Manufacturing Methods Industry 4.0

Course Code: DLMBMMIIT02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		5	none

## Course Description

The aim of the course is to enable students to evaluate and identify appropriate manufacturing methods in the context of Industry 4.0. For that purpose, the course provides a comprehensive introduction of such processes based on traditional, standardized manufacturing techniques that have influenced and are still influencing production processes through technological developments under the generic term Industry 4.0. These include technological advances in additive manufacturing processes that enable applications such as rapid prototyping, rapid tooling, and direct manufacturing. Finally, the course deals with the consequences of the digitization and networking of production facilities and their elements in terms of a cyber-physical system.

## Course Outcomes

On successful completion, students will be able to

- evaluate different manufacturing methods against given product and process requirements.
- define and design modern additive techniques in contrast to traditional manufacturing.
- assess and estimate the impact of current trends on manufacturing like cyber-physical systems to given manufacturing challenges and practical problems.
- apply modern processes like rapid prototyping, rapid tooling, and direct manufacturing.

## Contents

1. Introduction to Manufacturing Methods
  - 1.1 Basic Concepts
  - 1.2 Historical Development of Manufacturing
  - 1.3 About the Long Tail
2. Manufacturing Methods
  - 2.1 Casting and Molding
  - 2.2 Shaping
  - 2.3 Machining
  - 2.4 Joining
  - 2.5 Coating
3. Additive Manufacturing and 3D printing

- 3.1 Basics and Legal Aspects
- 3.2 Material Extrusion
- 3.3 Vat Polymerization
- 3.4 Powder Bed Fusion
- 3.5 Material Jetting
- 3.6 Binder Jetting
- 3.7 Direct Energy Deposition
- 3.8 Sheet Lamination
  
4. Rapid Prototyping
  - 4.1 Definitions
  - 4.2 Strategical and Operative Aspects
  - 4.3 Application Scenarios
  
5. Rapid Tooling
  - 5.1 Definitions
  - 5.2 Direct and Indirect Methods
  - 5.3 Application Scenarios
  
6. Direct/Rapid Manufacturing
  - 6.1 Potentials and Requirements
  - 6.2 Implementation Examples
  
7. Cyber-Physical Production Systems
  - 7.1 Introduction
  - 7.2 Cyber-Physical Production Systems
  - 7.3 Impact on Design and Maintenance of Plants
  - 7.4 Dynamic Reconfiguration of Plants
  - 7.5 Application Examples

# Industrial Automation

Course Code: DLMDSINDA01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		5	none

## Course Description

Production systems can be described as discrete event systems where the evolution is characterized by the occurrence of events. In the era of Industry 4.0 and highly-flexible manufacturing, there is the need to provide adequate means for the modeling, analysis, design, and control of flexible production environments. This course introduces several modeling approaches for the mathematical description of discrete event systems, such as Automata, Petri Nets, and Markov processes. Each approach is presented in both theory and practice with examples taken from the industry. The approaches are grouped into logic—where only the logic sequence of events determines the evolution—and timed, where the time schedule of the events also plays an important role. Although simple discrete event systems can be analyzed mathematically, complex systems need the support of computer simulation. The main issues concerning the simulation of discrete event systems are addressed. The final part of this course introduces the concept of supervisory control, which aims at changing the properties of a given system to improve specified behaviors and fulfill defined design specifications. Supervisory control is addressed both from the theoretical practical sides, describing how it can be implemented in a modern industrial environment. The course wraps up with discussion of interesting applications for modeling and design approaches, e.g., in the modeling and analysis of an industrial production unit. Additional conversation on topics like fault-diagnosis, decentralized and distributed supervision, optimization, and adaptive supervision provide a contingent connection between classical industrial automation and the recent, (big) data-driven, flexible, Industry 4.0 advanced industrial automation.

## Course Outcomes

On successful completion, students will be able to

- identify the main issues related to industrial automation and Industry 4.0 automation in particular.
- describe a discrete event system in a formal way by means of different mathematical models.
- analyze the performance of a system using formalisms and numerical simulation approaches.
- choose the best formalism for a given design scenario and formulate requirements.
- design and implement a supervisory controller to fulfill requirements.
- understand advanced topics related to Industry 4.0 industrial automation.

**Contents**

1. Introduction to Production Systems
  - 1.1 Basic concepts and definitions
  - 1.2 Industrial supervision and control
  - 1.3 Challenges
  - 1.4 Trends
2. Automata
  - 2.1 Preliminaries
  - 2.2 Deterministic finite automata
  - 2.3 Non-deterministic finite automata
  - 2.4 Properties
3. Petri nets
  - 3.1 Preliminaries
  - 3.2 Modeling systems
  - 3.3 Properties
  - 3.4 Analysis methods
4. Timed models
  - 4.1 Timed automata
  - 4.2 Markov processes
  - 4.3 Queuing theory
  - 4.4 Timed Petri Nets
5. Simulation of discrete event systems
  - 5.1 Basic concepts
  - 5.2 Working principles
  - 5.3 Performance analysis
  - 5.4 Software tools
6. Supervisory control
  - 6.1 Basic concepts
  - 6.2 Specifications
  - 6.3 Synthesis
  - 6.4 Performance analysis
  - 6.5 Implementation
7. Applications

- 7.1 Production system supervision
- 7.2 Monitoring and diagnosis of faults
- 7.3 Distributed and de-centralized supervision
- 7.4 Model-based optimization of production systems
- 7.5 Adaptive supervisory control

# Architectures of Self-Driving Vehicles

Course Code: DLMDSEAAD01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		5	none

## Course Description

This course gives an overview of the main architectural aspects of a self-driving car. After introducing the hardware and software platforms, the course presents the sensor solutions necessary to provide environment perception for autonomous vehicles. Such perception yields the information used for motion control, including braking and steering. The fundamental concepts for the realization and implementation of motion control are presented, together with related safety issues (e.g., motion control under false information). The way in which a self-driving car exchanges information with the outside world is also discussed, and the main technologies and protocols are introduced. The last part of the course elaborates on the social impact of self-driving cars: ethics, mobility, and design.

## Course Outcomes

On successful completion, students will be able to

- explain and recognize the main components of a self-driving car.
- distinguish the sensor solutions for a self-driving car and adopt the best one for a given scenario.
- model and implement a simple motion control system.
- manage the main communication protocols to retrieve valuable information.
- reflect on the social impact of self-driving cars.

## Contents

1. Introduction
  - 1.1 Basic concepts and key technologies
  - 1.2 Hardware overview
  - 1.3 Software overview
  - 1.4 State of the art and open challenges
  - 1.5 Trends
2. Environment Perception
  - 2.1 Basic concepts
  - 2.2 GPS
  - 2.3 Inertial sensors

- 2.4 Lidar and Radar
- 2.5 Cameras
3. Moving, Braking, Steering
  - 3.1 Fundamentals
  - 3.2 Dynamics of a mobile vehicle
  - 3.3 Braking technologies
  - 3.4 Lateral and longitudinal control
  - 3.5 Safety issues
4. Communication
  - 4.1 Car2X communication
  - 4.2 Protocols
  - 4.3 Safety issues
5. Social Impact
  - 5.1 Ethics for autonomous vehicles
  - 5.2 New mobility
  - 5.3 Autonomous vehicles and design

# Case Study: Localization, Motion Planning and Sensor Fusion

Course Code: DLMDSEAAD02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		5	none

## Course Description

This course provides the fundamental concepts and methods of localization, motion planning, and sensor fusion for mobile robotics and self-driving cars. Mobile robots and autonomous vehicles rely on the ability to perceive the environment and react to its dynamic changes. The first part of the course focuses on the representation of motion and navigation based on odometry, which is affected by errors due to information uncertainty. A possible solution is offered by localization methods which use odometry and complementary information, such as a GPS signal, to improve the estimation of the position of the autonomous vehicles within a reference frame. In this way, the vehicle is able to move towards a goal. The problems with detecting dynamic change in the environment is addressed in the last part of the course, where the methods of sensor fusion are introduced. Thanks to the fusion of multiple data sources, information can be extracted, e.g., an approaching object or a change in a situation can be revealed. The autonomous vehicle must be able to track the object and react to its movement to avoid human hazard and damage. The determination of the best trajectory to follow is addressed in the final part of the course. The course gives a hands-on overview of the main methods for localization, motion planning, and sensor fusion. The students must apply the concepts and methods to case studies involving a self-driving vehicle in two main scenarios: "on the road" and in a manufacturing facility.

## Course Outcomes

On successful completion, students will be able to

- distinguish the methods used for localization, motion planning, and sensor fusion.
- apply the methods to autonomous vehicles.
- understand the main issues related to the adoption of autonomous vehicles in real-world scenarios.

## Contents

1. Motion and Odometry
  - 1.1 Basic principles
  - 1.2 Motion models
  - 1.3 Navigation by odometry
  - 1.4 Holonomic and non-holonomic motion

- 1.5 Errors
2. Local Navigation
  - 2.1 Basic concepts
  - 2.2 Path finding
  - 2.3 Obstacle avoidance
3. Localization
  - 3.1 Basic concepts
  - 3.2 Triangulation
  - 3.3 GPS
  - 3.4 Probabilistic localization
  - 3.5 Uncertainty of motion
4. Sensor Fusion
  - 4.1 Sensors
  - 4.2 Elaborating data from sensors
  - 4.3 Kalman filter
  - 4.4 Extended Kalman filter
  - 4.5 Tracking objects
5. Motion Planning
  - 5.1 Path planning
  - 5.2 Motion prediction
  - 5.3 Trajectory generation

## Module Contents

### Artificial Intelligence

- History of AI
- Expert Systems
- Neuroscience
- Modern AI Systems
- AI Application Areas

### Project: AI Excellence with Creative Prompting Techniques

In this module, students delve into the world of generative AI applications, creating AI-generated content such as text, images, and videos. They learn to design, analyze, and evaluate different prompting techniques in these systems and apply them within their respective fields of study.

## Learning Outcomes

### Artificial Intelligence

On successful completion, students will be able to

- remember the historical developments in the field of artificial intelligence.
- analyze the different application areas of artificial intelligence.
- comprehend expert systems.
- apply Prolog to simple expert systems.
- comprehend the brain and cognitive processes from a neuro-scientific point of view.
- understand modern developments in artificial intelligence.

### Project: AI Excellence with Creative Prompting Techniques

On successful completion, students will be able to

- comprehend and implement various prompting techniques in generative AI applications.
- analyze, assess, and combine different prompt techniques for various expected AI outputs.
- implement ethical considerations into the design and execution of various generative AI applications.
- design, implement, and refine effective prompts and their combinations for real-world scenarios through various hands-on exercises.
- showcase creative and innovative thinking and reasoning in the application of advanced prompting techniques to solve multidimensional problems in their specialized area of study.

# Artificial Intelligence

Course Code: DLMAIAI01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		5	none

## Course Description

The quest for artificial intelligence has captured humanity's interest for many decades and has been an active research area since the 1960s. This course will give a detailed overview of the historical developments, successes, and set-backs in AI, as well as the development and use of expert systems in early AI systems. In order to understand cognitive processes, the course will give a brief overview of the biological brain and (human) cognitive processes and then focus on the development of modern AI systems fueled by recent developments in hard- and software. Particular focus will be given to discussion of the development of "narrow AI" systems for specific use cases vs. the creation of general artificial intelligence. The course will give an overview of a wide range of potential application areas in artificial intelligence, including industry sectors such as autonomous driving and mobility, medicine, finance, retail, and manufacturing.

## Course Outcomes

On successful completion, students will be able to

- remember the historical developments in the field of artificial intelligence.
- analyze the different application areas of artificial intelligence.
- comprehend expert systems.
- apply Prolog to simple expert systems.
- comprehend the brain and cognitive processes from a neuro-scientific point of view.
- understand modern developments in artificial intelligence.

## Contents

1. History of AI
  - 1.1 Historical Developments
  - 1.2 AI Winter
  - 1.3 Notable Advances in AI
2. Expert Systems
  - 2.1 Overview Over Expert Systems
  - 2.2 Introduction to Prolog
3. Neuroscience
  - 3.1 The (Human) Brain

### 3.2 Cognitive Processes

## 4. Modern AI Systems

### 4.1 Recent Developments in Hard- and Software

### 4.2 Narrow vs General AI

### 4.3 NLP and Computer Vision

## 5. AI Application Areas

### 5.1 Autonomous Vehicles & Mobility

### 5.2 Personalized Medicine

### 5.3 FinTech

### 5.4 Retail & Industry

# Project: AI Excellence with Creative Prompting Techniques

Course Code: DLMPAIECPT01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		5	none

## Course Description

In this course, students explore the exciting world of prompting in various generative AI applications. They involve themselves in hands-on exercises that combine various prompting techniques to create new AI-generated content, including text, images, and videos. Through these exercises, students learn how to effectively use, analyze, combine, and assess these systems within their specialized fields of study.

## Course Outcomes

On successful completion, students will be able to

- comprehend and implement various prompting techniques in generative AI applications.
- analyze, assess, and combine different prompt techniques for various expected AI outputs.
- implement ethical considerations into the design and execution of various generative AI applications.
- design, implement, and refine effective prompts and their combinations for real-world scenarios through various hands-on exercises.
- showcase creative and innovative thinking and reasoning in the application of advanced prompting techniques to solve multidimensional problems in their specialized area of study.

## Contents

- In this course, students engage in a practical application of a generative AI use case by choosing from the options provided in the extensive supplementary guide. The course presents practical examples as study materials and exercises with both individual and combined prompting techniques for open-source text, image, and video generation use cases. The exercises are crafted to inspire and lead students in executing their distinct generative AI use case work and provide guidance on describing the use case and selecting a mixture of prompting techniques. Additionally, students are led to critically evaluate the design, implementation, and the outcomes from both technical and ethical perspectives.

# Master Thesis

Course Code: DLMMTHE01

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		18	See current study and exam regulations (SPO)

## Course Description

The aim of the master thesis is to effectively apply the knowledge acquired throughout the master course to an academic paper that has a thematic reference to the master program. The thesis can consist of an empirical study or theoretical research. The thesis is an independent piece of work, that, with the guidance of a supervisor, seeks to scientifically analyze and critically discuss a chosen issue, and suggest possible solutions. The chosen topic from the student's area of specialization should demonstrate their acquired competence in the functional area, yet also enrich and round out the student's scientific knowledge. This will optimally prepare the student for the needs of their future career path.

## Course Outcomes

On successful completion, students will be able to

- The objective of this module is the completion of a written assignment, in line with scientific methodology, that demonstrates the student's capabilities through independent investigation of a topic pertaining to the master program's area of focus.

## Contents

- The master thesis should clearly state the topic and research question, and should, through extensive research, reflect the current state of the field in question. The student should demonstrate their knowledge in the form of an independent and solution oriented paper, using theoretical and/or empirical norms.

## Thesis Defence

Course Code: DLMMTHE02

Study Level	Language of Instruction and Examination	Contact Hours	CP	Admission Requirements
MA	English		2	See current study and exam regulations (SPO)

### Course Description

The thesis defense takes place after the written master thesis has been handed in by the student. The examiners (the supervisor and a second examiner) will invite the student to the defense. During the presentation, the student will demonstrate that he/she personally has independently produced the content and the results of their written thesis. The thesis defense consists of a presentation where the student discusses the most significant research outcomes and the results of their thesis, followed by a question-and-answer session chaired by the examiners.

### Course Outcomes

On successful completion, students will be able to

- The main objective of the thesis defense is for the student to prove their competence in research methodology and the specific subject matter. The students should also be able to actively participate in a subject specific discussion at a higher academic level with subject area experts. Additionally, the defense will evaluate the academic presentation skills and overall communication skills of the student.

### Contents

- The thesis defense consists of a presentation of the results and applied method of the master thesis, followed by a question-and-answer session chaired by the examiners.

### Literature

#### Compulsory Reading

#### Further Reading

- Subject specific literature chosen by the student
