Module Contents

- Fundamentals of Empirical Research
- The Empirical Research Process
- Qualitative Survey Research
- Standardized Survey Research
- Experimental Research
- Specifics of Research with Secondary and Observational Data

Learning Outcomes**Applied Research**

On successful completion, students will be able to

- evaluate the type and quality of empirical research and of concrete empirical research results based on relevant criteria.
- identify appropriate data and research methods to empirically address a specific problem or research question.
- name and critically compare the process steps as well as the potentials, aims and limitations of different quantitative and qualitative research methods.
- recognize and consider basic ethical and legal aspects while conducting empirical research.
- design an empirical and theory-based study on their own to adequately address a specific applied research problem.

Course Code: DLMAF01_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | None |

Course Description

The course teaches central concepts and methods of applied empirical research. The students acquire profound knowledge to evaluate the quality as well as the limitations of different empirical research approaches. First, students learn the central theoretical foundations of empirical research and the central process steps of empirical research projects. In doing so, students are also sensitised to the ethical and legal challenges. The course deals in depth with the application of central qualitative and quantitative research methods, for each of which the central goals and decision areas, their strengths, and weaknesses, as well as practical recommendations for application are discussed. The course enables students to develop an empirical study for an applied problem in their field or professional environment and to critically evaluate the quality of empirical findings as well as their validity.

Course Outcomes

On successful completion, students will be able to

- evaluate the type and quality of empirical research and of concrete empirical research results based on relevant criteria.
- identify appropriate data and research methods to empirically address a specific problem or research question.
- name and critically compare the process steps as well as the potentials, aims and limitations of different quantitative and qualitative research methods.
- recognize and consider basic ethical and legal aspects while conducting empirical research.
- design an empirical and theory-based study on their own to adequately address a specific applied research problem.

Contents

1. Fundamentals of Empirical Research
 - 1.1 Aims and Basic Approaches of Empirical Research
 - 1.2 Objectivity, Reliability, and Validity of Empirical Research
 - 1.3 Causality
2. The Empirical Research Process
 - 2.1 Determination of the Research Objective
 - 2.2 Choice of Research Design

- 2.3 Data Collection and Data Analysis
- 2.4 Interpretation and Presentation of Results
- 2.5 Ethical and Legal Aspects of Empirical Research
3. Qualitative Survey Research
 - 3.1 Fundamentals, Goals and Process Steps
 - 3.2 Central Forms of Data Collection
 - 3.3 Methods to Analyse Qualitative Data
 - 3.4 Quality Assessment
4. Standardized Survey Research
 - 4.1 Fundamentals, Goals and Process Steps
 - 4.2 Central Forms of Data Collection
 - 4.3 Questionnaire Design, Measurement and Operationalization
 - 4.4 Sampling and Sample Evaluation
 - 4.5 Quality Assessment
5. Experimental Research
 - 5.1 Fundamentals, Goals and Process Steps
 - 5.2 Types of Experiments and Experimental Designs
 - 5.3 Measurement and Manipulation of Variables
 - 5.4 Key Implementation Challenges
 - 5.5 Quality Assessment
6. Specifics of Research with Secondary and Observational Data
 - 6.1 Fundamentals, Goals and Specifics
 - 6.2 Selected Approaches to Analyse Secondary Data
 - 6.3 Selected Approaches to Analyse Observational Data

Module Contents

- Terms and Motivation for Process Management
- Strategic Process Management
- Modeling of Business Processes
- Process Controlling
- Process Roll-Out
- Process Optimization

Learning Outcomes**Process Management**

On successful completion, students will be able to

- describe motivation of process management, delineate typical processes of design phases, and identify risks of process change.
- document business processes in a structured manner.
- describe the motivation and use of reference processes and name at least one typical reference process.
- describe and exemplify required activities in the reengineering of processes.
- describe phases of a process roll-out, analyze effects of process changes and identify risks.

Process Management

Course Code: DLMWIWPBA01_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

Well-defined business processes are a central basis for the control and management of medium-sized and large organizations. They contain binding rules and agreements documenting the interaction of all organizational units and persons involved. In this course, practical documentation methods for process modeling and the use of reference processes are presented. In addition a discussion of phases and activities for reengineering processes is given which can then be used to redesign existing corporate processes. Subsequently, the course informs about organizational change and how it can be carried out with a process roll-out and what has to be considered in the process. Finally, the motivation, elements and results of strategic process management are presented and their relationships with corporate organization are explained.

Course Outcomes

On successful completion, students will be able to

- describe motivation of process management, delineate typical processes of design phases, and identify risks of process change.
- document business processes in a structured manner.
- describe the motivation and use of reference processes and name at least one typical reference process.
- describe and exemplify required activities in the reengineering of processes.
- describe phases of a process roll-out, analyze effects of process changes and identify risks.

Contents

1. Terms and Motivation for Process Management
 - 1.1 Terms: Process, Process Management
 - 1.2 Motivation for Process Management
 - 1.3 Risks and Challenges of Changing Processes in Organizations
 - 1.4 Phases of Process Design
 - 1.5 From Process to Workflow
2. Strategic Process Management
 - 2.1 Organizational Forms and Their Development
 - 2.2 Derivation of Enterprise Process Models
 - 2.3 Design and Structuring of Enterprise Process Models

- 2.4 Process Landscape and Process Maps
- 2.5 Reference Processes (ITIL, CMM as an Example)
- 3. Modeling of Business Processes
 - 3.1 Actual and Target Modeling
 - 3.2 Business Process and Notation (BPMN)
 - 3.3 Extended Event Driven Process Chains (eEPC)
- 4. Process Controlling
 - 4.1 The PDCA Approach and CIP
 - 4.2 Process Controlling, KPIs, Metrics, Dimensions
 - 4.3 Process Mining
- 5. Process Roll-Out
 - 5.1 Phases of a Process Roll-Out
 - 5.2 5.2 Simulation of Processes
- 6. Process Optimization
 - 6.1 State-Analysis and Process Evaluation
 - 6.2 Process Optimization
 - 6.3 Analysis of the Effects of Process Changes
 - 6.4 Change Management

Learning Outcomes

Operational Application Systems

On successful completion, students will be able to

- describe and differentiate categories of business application systems.
- describe and differentiate typical tasks and functions of systems for business process management, workflow management and document management.
- describe the motivation and objectives of ERP systems and evaluate how they support the planning and control of operational and strategic resources.
- state and delineate objectives, functions, and an example scenario for supply chain management systems.
- describe objectives, functions, and an example scenario for customer relationship management systems.
- describe and differentiate the use and information structure of analytical information systems and their applications for management information.
- analyze and evaluate for given scenarios which business functions can be usefully deployed by which types of operational application systems and to describe the knowledge gained.

Operational Application Systems

Course Code: DLMWIWPBA02_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

Almost every company uses operational application systems to perform or support business processes. In addition, many management decisions are made on the basis of data which is provided and evaluated by business application systems. This course first describes the categories of operational application systems and the business units in which they are used. Then, typical tasks and functions of systems for business process management, workflow management and document management are described. In addition, tasks, functions and example scenarios for enterprise resource planning, supply chain management and customer relationship management systems are presented. Finally, analytical information systems and their applications as management information systems are described.

Course Outcomes

On successful completion, students will be able to

- describe and differentiate categories of business application systems.
- describe and differentiate typical tasks and functions of systems for business process management, workflow management and document management.
- describe the motivation and objectives of ERP systems and evaluate how they support the planning and control of operational and strategic resources.
- state and delineate objectives, functions, and an example scenario for supply chain management systems.
- describe objectives, functions, and an example scenario for customer relationship management systems.
- describe and differentiate the use and information structure of analytical information systems and their applications for management information.
- analyze and evaluate for given scenarios which business functions can be usefully deployed by which types of operational application systems and to describe the knowledge gained.

Contents

1. Categories of Operational Application Systems
 - 1.1 Terms, Objectives and Delimitation of Operational Application Systems
 - 1.2 Horizontal and Vertical Integration
 - 1.3 Example Scenario for the Use of Operational Application Systems
2. Systems for Handling Business Processes

- 2.1 Business Process Management Systems
- 2.2 Workflow Management Systems
- 2.3 Document Management Systems
3. Enterprise Resource Planning
 - 3.1 Motivation and Goals of Enterprise Resource Planning Systems
 - 3.2 Planning and Control of Operational Resources
 - 3.3 Planning and Control of Strategic Resources
4. Supply Chain Management
 - 4.1 Motivation and Objectives of Supply Chain Management Systems
 - 4.2 General Principles and Challenges in SCM
 - 4.3 Functions of SCM Systems
 - 4.4 Example Scenario for the Use of SCM Systems
5. Customer Relationship Management
 - 5.1 Motivation and Goals of Systems to CRM
 - 5.2 General Tasks of CRM
 - 5.3 Example Scenario for the Use of CRM Systems
6. Management Information Systems
 - 6.1 Analytical Information Systems and their Applications
 - 6.2 Information Structure from a Management Perspective
 - 6.3 Example Scenario for the Use of Management Information Systems

Module Contents

- History and success factors of digital business
- Trends in Digital Business
- Knowledge and evaluation of alternative business models in digital business
- Procedure for the development of strategic corporate positioning in digital business
- Knowledge of alternative financing models
- Goals and procedures for the creation of the business plan for digital business models

Learning Outcomes

Digital Business Models

On successful completion, students will be able to

- know the history and framework of digital business models.
- understand the basic principles of innovation management.
- know and understand different business models of the digital economy and be able to evaluate their advantages and disadvantages.
- understand the basics of strategic and operational business model planning in e-commerce.
- independently create a business plan for a digital business model.

Digital Business Models

Course Code: DLMIDBM01_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

This course deals with IT-driven start-ups and business models. Based on the discussion of the historical development and framework conditions of digital business, alternative business models in digital business are systematically presented, analyzed and evaluated with regard to their respective strengths and weaknesses. Students study the central approaches to developing an independent corporate positioning and are enabled to autonomously examine and evaluate the central factors influencing corporate success in digital business. Further, alternative financing concepts for digital business models are presented and critically evaluated and the central components of a business plan are detailed. In addition, the entire process of creating and defining a business plan is presented in detail and tested using practical examples.

Course Outcomes

On successful completion, students will be able to

- know the history and framework of digital business models.
- understand the basic principles of innovation management.
- know and understand different business models of the digital economy and be able to evaluate their advantages and disadvantages.
- understand the basics of strategic and operational business model planning in e-commerce.
- independently create a business plan for a digital business model.

Contents

1. Innovation Management and Business Model Definitions
 - 1.1 Basic Concepts of Innovation Management Regarding Digital Business Models
 - 1.2 Business Models: Genesis - Definition - Relation to Innovation
 - 1.3 Specifics of Digital Business Models and Comparison to Traditional Approaches
2. Digital Business Models: Definition and Elements
 - 2.1 New Elements of Digital Business Models
 - 2.2 Redefinition and Core Elements of Digital Business Models
 - 2.3 Value Architecture and Value Mechanics
3. Basic Architectures, Standard Patterns and Network Integration
 - 3.1 Basic Digital Business Model Architectures

- 3.2 Standard Patterns in Business Model Elements
- 3.3 Networks and Differentiation Strategies
- 4. Success Factors and Strategy
 - 4.1 Relationships Between Business Model, Success Factors and Strategy
 - 4.2 Relevant Success Factors of Digital Business Models
 - 4.3 Strategy Levels and Strategy Examples in the Context of Digital Business Models and Their Elements
- 5. The Business Case and Special Features of Investment Planning
 - 5.1 Elements of the Business Case and Connection to Previous Concepts
 - 5.2 Revenue Mechanics, Revenue Planning and Performance Indicators
 - 5.3 Special Features of Investment Planning

Learning Outcomes

Information and Knowledge Management

On successful completion, students will be able to

- identify information flows in the company and derive recommendations for adequate information management systems.
- identify information management problems in the workplace and develop alternative approaches.
- distinguish between data and information management and name typical software on a case-by-case basis.
- explain the use and methods of knowledge-based systems and assess limitations of use.
- explain psychosocial conditions of knowledge distribution and to be able to derive recommendations from them.

Course Description

The use of digital information in companies is closely related to the knowledge of employees. This course provides students with the knowledge to localize information needs in the company, to identify transfer channels and to gain insights for the information technology to be used as well as for the preservation and application of knowledge in the company. Here, the connection between the strategic use of information technology and its effects on concrete workplace conditions is elaborated. After an overview of common methods of data management, case studies of information retrieval are explained, and suitable software solutions are considered. Based on this, systems and methods are presented that can be used to capture and store employee knowledge in order to serve as a basis for decision support. The necessary consideration of the psychosocial aspects of knowledge distribution form the conclusion of this course.

Course Outcomes

On successful completion, students will be able to

- identify information flows in the company and derive recommendations for adequate information management systems.
- identify information management problems in the workplace and develop alternative approaches.
- distinguish between data and information management and name typical software on a case-by-case basis.
- explain the use and methods of knowledge-based systems and assess limitations of use.
- explain psychosocial conditions of knowledge distribution and to be able to derive recommendations from them.

Contents

1. Introduction
 - 1.1 Defining the Subject Area
 - 1.2 Data, Metadata, Information, Knowledge
2. Strategic Information Management
 - 2.1 Identifying Information Flows
 - 2.2 Selection of Information Management Systems

- 2.3 Prerequisites of the Implementation
- 3. Information Management in the Workplace
 - 3.1 The Change of Existing Workflows Through IT
 - 3.2 Acceptance and Work-Appropriate Use of IT-Systems
 - 3.3 E-Mail Systems and Their Alternatives
- 4. Data Management Scenarios
 - 4.1 Document Management
 - 4.2 Administration and Accounting
 - 4.3 Materials Management
 - 4.4 Order Processing
 - 4.5 Supply Chains
- 5. Information Management Scenarios
 - 5.1 Planning
 - 5.2 Control
 - 5.3 Relationship Management
 - 5.4 Information Distribution (Content Management)
 - 5.5 Organization
 - 5.6 Cooperation & Communication
 - 5.7 Decision Support
- 6. Knowledge-Based Systems
 - 6.1 Knowledge Representation in Software (Ontologies)
 - 6.2 Case-Based Storage of Knowledge
 - 6.3 Rule-Based Storage of Knowledge
 - 6.4 Inference Machines
 - 6.5 Expert Support Systems
- 7. Knowledge Management
 - 7.1 Psychological Aspects of Knowledge Distribution
 - 7.2 Knowledge Sharing
 - 7.3 Knowledge and Learning

Learning Outcomes

Cyber Security and Data Protection

On successful completion, students will be able to

- explain the core concepts of cyber security, data protection, and cryptography including their differences and relationships.
- compare the approaches to data protection within in different legal systems.
- apply data protection concepts to data science and other application scenarios.
- analyze application scenarios to identify the adequate cyber security management measures that should be implemented.
- explain the different approaches to data protection in different cultures.

Cyber Security and Data Protection

Course Code: DLMCSITSDP01

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

With the increasing digitization and networking of IT systems, the need for safeguarding systems and the data processed by these systems has grown. The aim of this module is to provide an understanding of security measures needed, cyber security including cryptography, and data protection. While the need for cyber security is similar around the world, different cultures have different expectations regarding data protection and privacy. Nevertheless, personal data are often processed outside the country where the affected individuals live. Hence, the cultural aspects of data protection need to be taken into account wherever the data are processed. This course provides an overview of the main cyber security measures in different application scenarios, as well as their integration into an Information Security Management System, with particular focus on the relevant ISO/IEC 270xx family of standards. Cryptography provides an important tool set for cyber security and is used in many different application scenarios such as secure Internet protocols and block chain.

Course Outcomes

On successful completion, students will be able to

- explain the core concepts of cyber security, data protection, and cryptography including their differences and relationships.
- compare the approaches to data protection within in different legal systems.
- apply data protection concepts to data science and other application scenarios.
- analyze application scenarios to identify the adequate cyber security management measures that should be implemented.
- explain the different approaches to data protection in different cultures.

Contents

1. Foundations of Data Protection and Cyber Security
 - 1.1 Terminology and Risk Management
 - 1.2 Core Concepts of Cyber Security
 - 1.3 Core Concepts of Data Protection and Privacy
 - 1.4 Core Concepts of Cryptography
 - 1.5 Legal Aspects
2. Data Protection

- 2.1 Basic Concepts of Data Protection (ISO/IEC 29100, Privacy by Design)
- 2.2 Data Protection in Europe: the GDPR
- 2.3 Data Protection in the USA
- 2.4 Data Protection in Asia
3. Applying Data Protection
 - 3.1 Anonymity and Pseudonyms (k-Anonymity, i-Diversity, Differential Privacy)
 - 3.2 Data Protection in Data Science and Big Data
 - 3.3 User Tracking in Online Marketing
 - 3.4 Cloud Computing
4. Building Blocks of Cyber Security
 - 4.1 Authentication, Access Management and Control
 - 4.2 Cyber Security in Networks
 - 4.3 Developing Secure IT Systems (OWASP, etc.)
5. Cyber Security Management
 - 5.1 Security Policy
 - 5.2 Security and Risk Analysis
 - 5.3 The ISO 270xx Series
 - 5.4 IT Security and IT Governance
 - 5.5 Example: Cyber Security for Credit Cards (PCI DSS)
6. Cryptography
 - 6.1 Symmetric Cryptography
 - 6.2 Asymmetric Cryptography
 - 6.3 Hash Functions
 - 6.4 Secure Data Exchange (Diffie-Hellman, Perfect Forward Secrecy, etc.)
7. Cryptographic Applications
 - 7.1 Digital Signatures
 - 7.2 Electronic Money
 - 7.3 Secure Internet Protocols (TLS, IPSec, etc.)
 - 7.4 Block Chain

Module Contents

The seminar deals with current topics around social challenges of digitalization. In particular, social aspects and challenges are addressed and digitalization's influence on changes in social processes and working environments is analyzed and reflected upon. Each participant has to write a scientific paper on an assigned topic, which can serve as preliminary work for the master's thesis.

Learning Outcomes**Seminar: Societal Challenges in Digitalization**

On successful completion, students will be able to

- work independently on a given topic from the field of "Social Challenges of Digitalization", referring to academic literature.
- analyze important properties and relationships and present findings in a written scientific work.
- critically examine a given topic and identify potential problems or negative impacts so that decisions can be made based on this.

Course Description

As part of the seminar "Social Challenges of Digitization", students prepare a scientific paper on a relevant topic. Students thus demonstrate that they are able to work independently on a current and socially relevant topic and to document the findings scientifically.

Course Outcomes

On successful completion, students will be able to

- work independently on a given topic from the field of "Social Challenges of Digitalization", referring to academic literature.
- analyze important properties and relationships and present findings in a written scientific work.
- critically examine a given topic and identify potential problems or negative impacts so that decisions can be made based on this.

Requirements Management

Course Code: DLMPRERM01

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

Globalization and digitization are the mega-trends of our time. In addition to increasingly global networking, real-time communication and growing product complexity, customer requirements and needs are changing rapidly as well. The flexible, fast and target specific reaction, recording, controlling, monitoring and administration of these changing customer needs must be met by requirements management. This course will explain the internal and external drivers of requirements management as well as address the other mega-trends. The aim is to identify and understand the specific tasks, methods and quality criteria of requirements management. Furthermore, the need for industry-specific adaptation within the basic requirements management process flow is of major importance. Finally, this course will offer critical reflection, taking into consideration the limiting framework conditions when applying requirements management.

Course Outcomes

On successful completion, students will be able to

- understand the drivers and the importance of requirements management.
- name the essential tasks and functions of requirements management as well as describe their meaning.
- explain the different methods of requirements management.
- define quality criteria for good requirements management and identify requirements smells.
- explain the process of requirements management and derive industry-specific needs.

Contents

1. Basics and Drivers of Requirements Management
 - 1.1 Introduction
 - 1.2 Definition of Requirements and Management
 - 1.3 Requirements Management as an Answer to the VUCA World
 - 1.4 External and Internal Drivers for Requirements Management
 - 1.5 Project Management and Requirements Management
2. Classification and Terms of Requirements Management
 - 2.1 Requirements Management in Relation to Requirements Engineering
 - 2.2 Requirements Management in Relation to Business Analytics

- 2.3 From Customer Needs to the Specification of Requirements
- 2.4 The Specification Sheet and its Significance
- 2.5 The Importance of Functional Specifications and Technical Concept
3. Requirements Management Tasks
 - 3.1 Management and Control of Requirements
 - 3.2 Administration of Requirements
 - 3.3 Risk Management
 - 3.4 Implementation Management
 - 3.5 Modification Management
4. Methods and Quality of Requirements Management
 - 4.1 Scoping
 - 4.2 Requirements Analysis and Requirements Specification
 - 4.3 Requirements Modeling and Review
 - 4.4 Quality Criteria of Requirements Management
 - 4.5 Identification of Requirements Smells
5. Process and Industry-Specific Needs of Requirements Management
 - 5.1 Basic Process of Requirements Management
 - 5.2 Specifications for Projects in Mechanical and Plant Engineering
 - 5.3 Specification for Projects in Civil Engineering
 - 5.4 Specifications for Projects in the Social Sector
 - 5.5 Specifications for Projects in the Software Sector
6. Critical Reflection
 - 6.1 Costs/Benefits of Requirements Management
 - 6.2 Requirements Management and Agility—A Contradiction?
 - 6.3 Limits of Requirements Management

Management of IT Services and Architecture

Course Code: MWIT02-01_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

IT service management is an approach to align and understand a company's IT as a service provider and supporter of operational and business processes. Here, the focus is on quality management and handling of daily operations. In addition to specific IT projects, e.g., the development of an IT system or the introduction of standard software, strategic management must be used for the organization-wide IT infrastructure. The task of IT architecture management is the strategic alignment of the IT infrastructure with the organization's business and IT strategy. This course provides concepts, methods, procedures and models for the tasks within the scope of IT architecture management.

Course Outcomes

On successful completion, students will be able to

- name, explain and distinguish the basic principles of IT strategy, IT governance and IT architecture management.
- explain and differentiate between the typical activities of IT architecture management, their interrelationships and their dependencies.
- explain the fundamentals and challenges of IT service management.
- describe the motivation and structure of the IT Infrastructure Library (ITIL), explain the main elements and locate specific activities in the service lifecycle.

Contents

1. IT Service Management Basics and Terms
 - 1.1 IT Services
 - 1.2 IT Service Management
 - 1.3 ITSM Frameworks
2. ITIL 4 - Basics and Four Dimensions
 - 2.1 Stakeholders, Services and Service Management
 - 2.2 Value Contribution of IT
 - 2.3 Four Dimensions Model
3. ITIL 4 - Service Value System
 - 3.1 Basics and Overview

- 3.2 Inputs, Outcome and Governance
- 3.3 The Service Value Chain
- 3.4 Continual Improvement
- 4. ITIL 4 - Principles
 - 4.1 Overview
 - 4.2 Value Orientation
 - 4.3 Iterative Procedure and Feedback
 - 4.4 Establish Collaboration and Visibility
 - 4.5 Optimize and Automate
- 5. ITIL 4 - Practices
 - 5.1 Overview
 - 5.2 General Management Practices
 - 5.3 Service Management Practices
 - 5.4 Technical Practices
- 6. IT Architecture Management Basics and Terms
 - 6.1 IT Enterprise Architecture
 - 6.2 Goals of Enterprise Architecture Management
 - 6.3 Processes in the Management of IT Enterprise Architectures

Module Contents

Digital Transformation in Healthcare

- Terms, concepts and examples of digitalization in the health and social care sector
- Design approaches for digitalization projects
- Ethical consideration of digitalization processes
- Challenges and risks of digital transformations

Seminar: Digital Transformation in Healthcare

This course will take a critical look at current topics and trends related to the digitalization of processes in medicine and nursing.

Learning Outcomes

Digital Transformation in Healthcare

On successful completion, students will be able to

- explain the basic terms and concepts of digitalization.
- understand the principles and modes of action of digital transformations.
- describe current technologies and digitalization processes in medicine and nursing.
- develop their own ideas and design approaches for digitalization projects.
- determine the ethical problems of digital transformations.
- assess the challenges and risks of digitalization processes.

Seminar: Digital Transformation in Healthcare

On successful completion, students will be able to

- evaluate a digitization issue from different points of view or perspectives.
- implement a systematic literature search according to scientific principles.
- write a scientific paper according to formal and methodological criteria.
- identify various, current issues of digital transformation in medicine and nursing.
- contrast the different effects and changes caused by digitization processes in medicine and nursing.

Course Description

In the current context of demographic change, rising healthcare costs, and the limited availability of healthcare resources, digital transformation in healthcare presents new opportunities and challenges. This course provides an overview of crucial digital technologies and their application in the healthcare sector, simultaneously considering leading legal and societal initiatives shaping the transformation of healthcare systems. The introduction provides the theoretical foundations and the overview of terms and concepts of digital transformation, shedding light on current difficulties in healthcare systems that are driving digital innovation. This is followed by an examination of the "digital health" phenomenon and its disruptive impact on patients, physicians, and their relationships. Digital transformation is linked with certain technologies such as artificial intelligence (AI), blockchain, and quantum technologies (QT). To assess the value and implications of these technologies for healthcare, this course provides an essential understanding of their key concepts and mechanisms of work. Digital technologies have a transformative effect on healthcare, with both positive and negative implications. Thus, a set of ethics applicable to digital health is urgently needed to shape the digital transformation process, minimizing its risks and enhancing its benefits. This course provides theoretical ethical foundations and introduces a practical ethical framework for evaluating digital health interventions. Finally, the course examines the main risks and challenges related to digital transformation in healthcare, such as unreliable AI, threats to data security, and data privacy, providing an overview of legal and societal strategies to govern digital technologies.

Course Outcomes

On successful completion, students will be able to

- explain the basic terms and concepts of digitalization.
- understand the principles and modes of action of digital transformations.
- describe current technologies and digitalization processes in medicine and nursing.
- develop their own ideas and design approaches for digitalization projects.
- determine the ethical problems of digital transformations.
- assess the challenges and risks of digitalization processes.

Contents

1. Foundations of Digital Transformation in Healthcare
 - 1.1 Current Challenges of Healthcare Systems
 - 1.2 Digitization, Digitalization, and Digital Transformation

- 1.3 Potential of Digital Technologies in Healthcare
2. Digital Health
 - 2.1 A Brief History of Digital Health
 - 2.2 Digital Health as a Paradigm Shift in Traditional Healthcare
 - 2.3 Empowerment Through Digital Health: Patients
 - 2.4 Empowerment Through Digital Health: Physicians
 - 2.5 The Patient–Physician Relationship in the Digital Health Era: It’s Complicated
3. Technologies in Digital Health
 - 3.1 Artificial Intelligence
 - 3.2 Blockchain
 - 3.3 Quantum Technologies
4. Ethics in Digital Health
 - 4.1 Ethics: Terms and Concepts
 - 4.2 Theoretical Approaches to Normative Ethics
 - 4.3 Methods for the Ethical Evaluation of Digital Health
 - 4.4 Ethics and Soft Law: European Ethics Guidelines for Trustworthy Artificial Intelligence
5. Risks and Challenges of Digital Health
 - 5.1 Risks of Digital Health
 - 5.2 Are Soft Laws Enough?
 - 5.3 From Ethics to Legislation

Seminar: Digital Transformation in Healthcare

Course Code: DLMGWDIMP02_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | None |

Course Description

This course focuses on digital transformations and trends in medicine and nursing. Technological advances in information and communication technology as well as robotics are leading to the transformation of established structures and processes in health and social care in a very short time. This also means that the familiar roles and areas of responsibility of all involved stakeholders (e.g. doctors, nursing and care staff, patients, citizens, etc.) are changing. In health and care management, the ability to critically examine innovations or new technologies in order to be able to assess their actual social, cultural and economic added value is needed. For this reason, each student prepares a written research essay in which the critical examination of digital transformation processes takes place, whereby advantages and disadvantages as well as opportunities and limitations of digital technologies and processes are recognized. In addition, this also opens up perspectives for the active design and management of digitization processes in hospitals, nursing homes and other health and social care facilities

Course Outcomes

On successful completion, students will be able to

- evaluate a digitization issue from different points of view or perspectives.
- implement a systematic literature search according to scientific principles.
- write a scientific paper according to formal and methodological criteria.
- identify various, current issues of digital transformation in medicine and nursing.
- contrast the different effects and changes caused by digitization processes in medicine and nursing.

Contents

- The digital transformation in health and social care is progressing continuously: innovative care processes are arriving in practice, new technologies and markets are arising, but new risks and problems are also emerging. This seminar addresses such current topics of digitalization in medicine and care. The seminar topics include various technologies and innovations of digitalization in health and social care (mHealth, internet of things, AI, etc.), which will be analyzed from different perspectives e.g. from an ethical, legal, social, cultural and economic point of view. Each student has to prepare a research essay on an assigned topic.

Module Contents**Big Data in Insurance**

- Background and History of Big Data and its Applications in the Insurance Industry
- Enabler of Digital Transformation in the Insurance Industry
- Application of Data Mining and Big Data Management in the Insurance Industry
- Data Analysis Methods
- Data Visualization Techniques
- Case Study: Big Data Management in the Insurance Industry

Digital Innovation in Insurance

- Digitalization, Innovation and Transformation in the Insurance Industry
- Opportunity Recognition: Identifying New Opportunities in the Marketplace
- Model Formations for Digital Insurance
- Innovation Management in the Insurance Industry
- Current Developments: Conceptual Innovations
- Case Study "Digital Innovation Management in the Insurance Industry"

Learning Outcomes

Big Data in Insurance

On successful completion, students will be able to

- explain the terms around data mining and big data.
- scope data mining and big data from other enablers of digitization.
- outline the various applications of data mining and big data in the insurance industry and evaluate their benefits in a differentiated manner, considering the five Vs (Volume, Variety, Velocity, Validity, Value) that are elementary for big data.
- name and apply the tools of data analysis and evaluation. This explicitly refers to data mining and analyzing large amounts of insurance industry data based on statistical and interdisciplinary methods.
- explain the data protection and moral implications of Big Data in the insurance industry and take them into account in their practical actions.

Digital Innovation in Insurance

On successful completion, students will be able to

- explain the terms around digitalization, innovation and transformation in the insurance industry.
- develop Digital Insurance Innovation as a model and explain it based on various characteristics.
- explain and apply innovation management and its tools.
- operate opportunity recognition in the market, considering the ever-changing game rules.
- outline current trends of Digital Innovation Management, such as conceptual innovations, and exemplarily applying them to the insurance industry.
- independently delve into a topic in the field of digital insurance innovation and present their findings in writing as part of a case study.

Big Data in Insurance

Course Code: DLMWDI01_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

In this course, students are familiarized with the framework, background and history of Big Data and its increasing relevance for the financial services industry. Based on the success factors (so-called five Vs), there is, among other things, a comprehensive elaboration of IT- and data-specific as well as data-specific legal requirements. This enables the course participants to deal with process- and product-related applications of data mining and big data management in the insurance industry and to reflect on them critically. Methods of data analysis such as supervised and unsupervised learning, deep learning as well as various techniques of data visualization enable the students to work with Big Data in the insurance industry. Using an exemplary case study, students will be able to transfer what they have learned to new situations within the VU.

Course Outcomes

On successful completion, students will be able to

- explain the terms around data mining and big data.
- scope data mining and big data from other enablers of digitization.
- outline the various applications of data mining and big data in the insurance industry and evaluate their benefits in a differentiated manner, considering the five Vs (Volume, Variety, Velocity, Validity, Value) that are elementary for big data.
- name and apply the tools of data analysis and evaluation. This explicitly refers to data mining and analyzing large amounts of insurance industry data based on statistical and interdisciplinary methods.
- explain the data protection and moral implications of Big Data in the insurance industry and take them into account in their practical actions.

Contents

1. Background and History of Big Data and Its Applications in the Insurance Industry
 - 1.1 Definitions and Scoping
 - 1.2 Characterization of Big Data based on the Five and Further “Vs”
 - 1.3 Data Privacy, Data Security and Data Integrity
2. Enabler of Digital Transformation in the Insurance Industry
 - 2.1 Digital Transformation
 - 2.2 Enabler

3. Application of Data Mining and Big Data Management in the Insurance Industry
 - 3.1 IT Architectures and Data Management
 - 3.2 Challenges and Opportunities
 - 3.3 Process Related Applications
 - 3.4 Product Related Applications
4. Data Analysis Methods
 - 4.1 Supervised and Unsupervised Learning
 - 4.2 Deep Learning
 - 4.3 Decision Trees
 - 4.4 Neural Networks
 - 4.5 Closure in Bayesian Networks
 - 4.6 Regression Analysis
 - 4.7 High Performance and Cloud Computing
 - 4.8 Predictive Modeling and Model Aggregation Methods
5. Data Visualization Techniques
 - 5.1 Principles of Data Visualization
 - 5.2 Visualization Approaches
 - 5.3 Visualization Tools
6. Case Study: Big Data Management in the Insurance Industry
 - 6.1 Adoption Process

Digital Innovation in Insurance

Course Code: DLMWDI02_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

The course will teach students the requirements of identifying opportunities that arise in the marketplace and how to develop and successfully implement appropriate digital innovations in the financial services industry. The prerequisite for this is a detailed understanding of the importance of digital innovations for the future viability of the VU. In addition, the competencies of model building for digital business models (including in the form of customer requirements and customer journey) are taught. Ways in which innovative business models can be operationalized for the insurance industry will be demonstrated. In addition, trends in the digital development of the industry will be discussed. A case study on digital innovation management in the insurance industry enables students to apply their acquired knowledge in an exemplary manner.

Course Outcomes

On successful completion, students will be able to

- explain the terms around digitalization, innovation and transformation in the insurance industry.
- develop Digital Insurance Innovation as a model and explain it based on various characteristics.
- explain and apply innovation management and its tools.
- operate opportunity recognition in the market, considering the ever-changing game rules.
- outline current trends of Digital Innovation Management, such as conceptual innovations, and exemplarily applying them to the insurance industry.
- independently delve into a topic in the field of digital insurance innovation and present their findings in writing as part of a case study.

Contents

1. Digitalization, Innovation and Transformation in the Insurance Industry
 - 1.1 Definition and Delimitation
 - 1.2 Characterization of Digital Insurance
 - 1.3 Innovations in the Digital Evolution
 - 1.4 Challenges and Opportunities of Digital Innovations
2. Opportunity Recognition: Identifying New Opportunities in the Marketplace

- 2.1 Processes of Change and Recognition of Opportunities
- 2.2 Current Situation and Recent Developments in the Insurance Industry
- 2.3 Distribution Channels
- 2.4 Regulation and Data Protection
3. Model Formations for Digital Insurance
 - 3.1 Voice of the Customer
 - 3.2 Customer Journey Analysis
 - 3.3 Corporate Digital Insurance
 - 3.4 Customer Equity and Customer Value of Digital Insurance
 - 3.5 Critical Success Factors
4. Innovation Management in the Insurance Industry
 - 4.1 Innovation Models
 - 4.2 Future Challenges for Innovations in the Insurance Industry
5. Current Developments: Conceptual Innovations
 - 5.1 The Blue Ocean Shift
 - 5.2 Network Imperative (Prosumer and Network Orchestration)
 - 5.3 Recruiting and Personnel Development in the Digital World
6. Case Study "Digital Innovation Management in the Insurance Industry"
 - 6.1 The RPA Project
 - 6.2 The Decision Template

Module Contents

User Interface and Experience

- ROI of UX design
- Role and mindset of UX design in IT projects
- The UX design process
- UX psychology: How the human mind works
- User research
- UX design basics

Project: Human Computer Interaction

In this course the students will gain practical experience in user experience design. They will conduct user testing for a given user interface and work on developing improvements. The work process and the results will become part of a portfolio.

Learning Outcomes

User Interface and Experience

On successful completion, students will be able to

- Understand what design is about and the crucial aspects of good design
- understand and define the role of the UI/UX designer within a project.
- explain the UX design process and the user-centered mindset.
- advocate the importance of UX design for IT projects.
- describe the basic methods of user research, user testing, and user-centered design.

Project: Human Computer Interaction

On successful completion, students will be able to

- evaluate the usability of a user interface.
- conduct user testing.
- understand the practical implications of putting users first.
- make small changes in existing user interfaces and recognize the situations in which a user experience designer should be consulted.

Course Description

UX design is crucial to the development of new IT services and applications and enhances the quality of the outcome. Applying UX design techniques can significantly and positively change the software development process, and good UX design is the result of effective teamwork. Within this course the students will understand the mindset, basic techniques, and impact of UX design on IT projects. They will learn how the UX design process works and the role of the UX designer within IT projects. They will also gain skills in the type of collaboration that produces the best results. Using their basic knowledge about good design, the students will know when it is appropriate that they make small changes to UIs themselves and when it is time to consult a designer.

Course Outcomes

On successful completion, students will be able to

- Understand what design is about and the crucial aspects of good design
- understand and define the role of the UI/UX designer within a project.
- explain the UX design process and the user-centered mindset.
- advocate the importance of UX design for IT projects.
- describe the basic methods of user research, user testing, and user-centered design.

Contents

1. ROI of UX design
 - 1.1 Efficacy
 - 1.2 Efficiency
 - 1.3 The impact of design on use errors
2. Role and Mindset of UX design in IT projects
 - 2.1 The role of UX design: the UX designer
 - 2.2 The UX mindset: putting the user first
3. The UX design Process
 - 3.1 In a waterfall process environment
 - 3.2 In an agile process environment
4. UX Psychology: How the Human Mind Works

- 4.1 Perceptual psychology
- 4.2 Information processing
- 4.3 Decision-making
- 4.4 Situation awareness
- 4.5 Errors
5. User Research
 - 5.1 The benefit of user research
 - 5.2 Basic research techniques
 - 5.3 User testing
6. UX design Basics
 - 6.1 Interaction design
 - 6.2 Information architecture
 - 6.3 Screen design
 - 6.4 Graphic design
 - 6.5 Rules of good design

Course Description

In this course the students will gain practical experience in user experience design. They will set up and conduct a user testing for a given user interface and develop improvements. The work process and the results will become part of a portfolio.

Course Outcomes

On successful completion, students will be able to

- evaluate the usability of a user interface.
- conduct user testing.
- understand the practical implications of putting users first.
- make small changes in existing user interfaces and recognize the situations in which a user experience designer should be consulted.

Contents

- User experience design focusses on the needs of users. Within this portfolio project the students put into practice basic techniques which lead to good user-centered design. They learn how to test the user experience and usability of an application by conducting user tests, and they also learn how to develop and test ideas for improvement. Students will finish this course having gained practical experience working within the mindset of putting users first.

Agile Software Development Techniques and Methods

- Features and Principles of Agility
- Agility in Small Teams with Scrum
- Agile Portfolio and Project Management
- Agile Requirements and IT Architecture Management
- Agile Testing
- Agile Delivery and Deployment

Project: Agile Software Development Techniques and Methods

The goal of the project is the execution of an agile project based on agile methods such as Scrum or KANBAN and documentation of the process and its results. The focus should be on the agile execution - including the standards of the chosen methodology but also focusing on the defined and created artifacts.

Learning Outcomes

Agile Software Development Techniques and Methods

On successful completion, students will be able to

- analyze and assess problems and risks of industrial software development and their consequences for development processes.
- know and understand the basic principles of agile software engineering.
- analyze practical scenarios and independently apply suitable methods and tools of agile software engineering.

Project: Agile Software Development Techniques and Methods

On successful completion, students will be able to

- independently apply the basic principles of agile methodologies in software engineering in smaller projects.
- independently analyze and evaluate the advantages and disadvantages of agile software engineering in practical scenarios.

Agile Software Development Techniques and Methods

Course Code: DLMIWNF01_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

Agile software development means simplifying software processes by concentrating on the main activities and implementing them with pragmatic principles of software engineering. This course provides an overview of the topic and differentiates agile software development from plan-driven development processes. In addition, the course teaches which mixture of techniques and procedures from agile and plan-driven software development is best suited for which situations.

Course Outcomes

On successful completion, students will be able to

- analyze and assess problems and risks of industrial software development and their consequences for development processes.
- know and understand the basic principles of agile software engineering.
- analyze practical scenarios and independently apply suitable methods and tools of agile software engineering.

Contents

1. Features and Principles of Agility
 - 1.1 Features and Challenges of Software Projects
 - 1.2 Classification of Uncertainty
 - 1.3 Comparison of Agile and Classic Software Development
 - 1.4 Principles of Agility
2. Agility in Small Teams with Scrum
 - 2.1 Basics and General Setup with Scrum
 - 2.2 Central Management Artifact: Product Backlog
 - 2.3 Other Management Artifacts
3. Agile Portfolio and Project Management
 - 3.1 Planning Levels in Agile Project Management
 - 3.2 Agile Portfolio Management
 - 3.3 Organization of Several Teams in One Project
 - 3.4 Product and Release Planning

4. Agile Requirements and IT Architecture Management
 - 4.1 Requirements Engineering in Agile Projects
 - 4.2 Architecture Management in Agile Projects
5. Agile Testing
 - 5.1 Basics and Requirements for the QA Organization
 - 5.2 Testing Levels and Agility
 - 5.3 Test Automation
6. Agile Delivery and Deployment
 - 6.1 Basics and Continuous Delivery Pipeline
 - 6.2 Continuous Build and Continuous Integration
 - 6.3 Acceptance Tests, Load Tests and Continuous Deployment

Project: Agile Software Development Techniques and Methods

Course Code: DLMIWNF02_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

In this course, students acquire a deeper understanding of the learned techniques and methods of agile software development by applying them in a small project. In consultation with the tutor, students select a topic for their project from the provided topic catalog, carry out the project using agile techniques and methods, and describe the project and their experiences in a 12-15-page project report.

Course Outcomes

On successful completion, students will be able to

- independently apply the basic principles of agile methodologies in software engineering in smaller projects.
- independently analyze and evaluate the advantages and disadvantages of agile software engineering in practical scenarios.

Contents

- An up-to-date catalog of topics provided in the module's online platform offers the basis of the module's content and can be supplemented or updated by the course instructor.

Module Contents**E-Commerce I**

- Basics of e-business and e-commerce
- Forms of e-commerce
- Strategic options in e-commerce
- Development of e-commerce strategies
- Measurement of success and success factors in e-commerce
- Risk benefit in e-commerce
- E-commerce in selected sectors

E-Commerce II

- Basics of online marketing and e-commerce
- web usability
- Network-based payment systems
- Legal basis
- Shop systems - tools - logistics
- Social media marketing in e-commerce
- Monitoring and analysis

Learning Outcomes

E-Commerce I

On successful completion, students will be able to

- explain the basics and theory of e-commerce.
- know analysis methods for the economic management of e-commerce.
- classify the terms e-commerce and e-business.
- explain alternative strategies and instruments of e-commerce, implement them and check their influence on success.
- work with chances and possibilities of the internet in connection with e-commerce.
- know current business models and use this knowledge to find additional distribution channels.
- analyze e-commerce from a management perspective and prepare well-founded decision documents.
- know the sectoral characteristics of e-commerce, especially how e-commerce is structured in the B2B and capital goods sector and what has to be considered in the consumer goods industry (B2C).

E-Commerce II

On successful completion, students will be able to

- assess the potential of an online shop to successfully sell products and services over the Internet.
- know the conceptual, technical and legal aspects of e-commerce
- describe important prerequisites for success in e-commerce such as product range presentation, checkout and payment processes, conversion rate, etc.
- know selection criteria for shop systems and know the most important ones (Hybris, Magento etc.)
- explain current and future challenges, so that they can implement e-shop and e-commerce projects themselves.

E-Commerce I

Course Code: MWEC01-01_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

This course addresses the topic of e-commerce. In addition to basic technical terms, concepts, business models and players, the opportunities and risks of electronic commerce within market-related and legal frameworks are also introduced. Based on this, the possible strategic options in e-commerce are presented in detail, on the basis of which students can derive their own e-commerce strategy.

Course Outcomes

On successful completion, students will be able to

- explain the basics and theory of e-commerce.
- know analysis methods for the economic management of e-commerce.
- classify the terms e-commerce and e-business.
- explain alternative strategies and instruments of e-commerce, implement them and check their influence on success.
- work with chances and possibilities of the internet in connection with e-commerce.
- know current business models and use this knowledge to find additional distribution channels.
- analyze e-commerce from a management perspective and prepare well-founded decision documents.
- know the sectoral characteristics of e-commerce, especially how e-commerce is structured in the B2B and capital goods sector and what has to be considered in the consumer goods industry (B2C).

Contents

1. Basics of E-Business and E-Commerce
 - 1.1 Definition of Terms, Limitations and Links to Other Units
 - 1.2 Mobile Commerce
 - 1.1 Trends and Opportunities
 - 1.2 Economic Framework Conditions in E-Commerce
 - 1.3 Value Creation and Business Models
 - 1.4 Actors/Market Participants and Business Relations
2. Forms of E-Commerce
 - 2.1 Types of E-Commerce Operations

- 2.2 Innovative Forms of Interactive E-Commerce
3. Strategic Options in E-Commerce
 - 3.1 Product Range Policy
 - 3.2 Pricing Policy
 - 3.3 Distribution Policy
 - 3.4 Communication Policy
 - 3.5 IT System Landscape and Internal Organization of E-Commerce
 - 3.6 Customer Loyalty, Trust and Reputation
4. Development of an E-Commerce Strategy
 - 4.1 Conceptual Framework
 - 4.2 Target Planning
 - 4.3 E-Business Analysis
 - 4.4 E-Business Strategy Formulation
 - 4.5 E-Business Strategy Implementation and Strategy Audit
5. Success Measurement and Success Factors in E-Commerce
 - 5.1 Success Measurements in E-Commerce
 - 5.2 Success Factors in E-Commerce
6. Opportunities and Risks in E-Commerce
 - 6.1 Legal Risks in E-Commerce (B2C)
 - 6.2 Opportunities and Risks for Pure Players
 - 6.3 Opportunities and Risks for Multi-Channel Players
7. E-Commerce in Selected Sectors
 - 7.1 E-Commerce in the Consumer Goods Sector (B2C) - E-Shop
 - 7.2 E-Commerce in the Capital Goods Sector (B2C) - E-Procurement

E-Commerce II

Course Code: MWEC02-01_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

This course expands and deepens the understanding of electronic commerce with elements of operational marketing, especially brand communication and interactive product/service and pricing, complemented by in-depth aspects of the growing importance of payment systems and mobile commerce systems. Based on the understanding of online customer behavior, participants discuss online advertising, pricing and communication, as well as PR activities, for example in the area of social networks. Another focus is on the technical requirements for successful e-commerce, such as usability, selection of shop and payment systems. The course program is supplemented by legal framework conditions and possibilities for customer integration. After completing this course, students will have a deeper understanding of marketing implications of e-commerce.

Course Outcomes

On successful completion, students will be able to

- assess the potential of an online shop to successfully sell products and services over the Internet.
- know the conceptual, technical and legal aspects of e-commerce
- describe important prerequisites for success in e-commerce such as product range presentation, checkout and payment processes, conversion rate, etc.
- know selection criteria for shop systems and know the most important ones (Hybris, Magento etc.)
- explain current and future challenges, so that they can implement e-shop and e-commerce projects themselves.

Contents

1. Basics of Online Marketing and E-Commerce
 - 1.1 Behavior of Online Customers
 - 1.2 Forms of Online Marketing
 - 1.3 Importance, Function and Impact of Online Marketing in E-Commerce
 - 1.4 Online Sales Channels, Mobile Marketing and Apps
 - 1.5 Implementation: Decision Criteria, Specifications and Project Management
2. Web Usability

- 2.1 Criteria of Good Web Usability
- 2.2 Barrier-Free Design and Responsive Design
- 2.3 Search Engine Optimization and Content Marketing
3. Network-Based Payment Systems
 - 3.1 Criteria for Web-Based Payment Systems
 - 3.2 Prepaid Systems, Pay-Now Systems and Pay-Later Systems
 - 3.3 Mobile Payment and Scoring
4. Legal Basis
 - 4.1 Legal Aspects of Ordering and Delivery Processes
 - 4.2 General Terms and Conditions, Commercial Law and Right of Withdrawal
 - 4.3 Image Rights, Trademark Protection and Data Privacy
 - 4.4 Liability of the Shop and Website Operator
5. Shop Systems - Tools - Logistics
 - 5.1 Success Factors and Selection Criteria of a Good Online Shop
 - 5.2 Seal of Approval/Certification
 - 5.3 Range of Goods and Ordering Process
 - 5.4 Processing and Logistics
 - 5.5 Collection and Receivables Management
6. Social Media Marketing in E-Commerce
 - 6.1 Cross-Media Marketing of Online Shops
 - 6.2 Customer Retention and Achievement of Reach
 - 6.3 Conflict Management in Social Networks
 - 6.4 Social Media Advertising and Advertising Networks
7. Monitoring and Analysis
 - 7.1 Measuring Success: Goals, Methods and Funds
 - 7.2 Targeting and KPI Definitions
 - 7.3 Web Controlling
 - 7.4 Visitor Analysis

Module Contents

Global Supply Chain Management

- Value networks - motives, typologies, goals
- Directions of impact of SCM strategies

Supply Chain Risk Management and Controlling

- SCM instruments
- Controlling systems in value networks
- Risk management in value networks

Learning Outcomes

Global Supply Chain Management

On successful completion, students will be able to

- specify the goals and tasks of supply chain management and how it differs from pure logistics management.
- specify the tools and instruments for designing SCM.
- list possible measures to avoid obstacles in the implementation and operation of supply chains.
- assess the potential impact of coordinating collaborations on supply chain management.
- name the basic supply, disposal and recycling strategies and indicate their contents.
- indicate the motives for quality management in SCM and the methods and instruments used.
- assess which business software can support and control the functions of the supply chain.

Supply Chain Risk Management and Controlling

On successful completion, students will be able to

- assess tasks of the controlling department and evaluate problems in implementation of controlling systems in supply chains.
- assess the significance of key figures in supply chain controlling and know how these are used.
- reflect on instruments of SC controlling and determine combinations of classical and innovative controlling instruments.
- determine when SCM software is used in controlling and what is required for their implementation.
- explain the tools of controlling and apply them in practice.
- name and explain options that influence the success of a supply chain, why risk management is carried out within supply chains and compatible strategies for supply chains.
- understand the organizational design with System Dynamics and the use in the supply chain management.

Global Supply Chain Management

Course Code: MWCH01_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

A problem-centered understanding of global value networks requires knowledge of their motives and goals. Furthermore, in view of the apparent diversity, it seems particularly useful to systematize these networks in certain typologies. On the basis of such systematizations it is then possible to systematize the spectrum of strategically relevant questions and design options in the field of SCM in a differentiated form. In addition, this also makes it possible to present the instrumental categories of SCM that are particularly relevant in this context.

Course Outcomes

On successful completion, students will be able to

- specify the goals and tasks of supply chain management and how it differs from pure logistics management.
- specify the tools and instruments for designing SCM.
- list possible measures to avoid obstacles in the implementation and operation of supply chains.
- assess the potential impact of coordinating collaborations on supply chain management.
- name the basic supply, disposal and recycling strategies and indicate their contents.
- indicate the motives for quality management in SCM and the methods and instruments used.
- assess which business software can support and control the functions of the supply chain.

Contents

1. Motives and Effects of Logistics Value Networks
 - 1.1 What does Supply Chain Management mean?
 - 1.2 What is logistics management?
 - 1.3 Service providers in the supply chain
 - 1.4 Importance of Supply Chain Management
2. Typologies of SCM and design models
 - 2.1 Supply chain strategy
 - 2.2 Instruments for supply chain strategies
 - 2.3 Inventory Reduction in Warehouse Management
 - 2.4 Freight cost reduction within the framework of the transport cost policy

- 2.5 Efficient Replenishment
- 3. Problem-oriented concepts and corresponding management concepts
 - 3.1 Problems in the supply chain
 - 3.2 Interfaces in the Supply Chain
 - 3.3 The Bullwhip Effect
 - 3.4 Collaborative Planning, Forecasting and Replenishment (CPFR)
- 4. Tasks and goals of the SCM
 - 4.1 Tasks in Supply Chain Management
 - 4.2 Goals of Supply Chain Management
 - 4.3 Sustainable Supply Chain Management (SSCM)
- 5. Cooperation and coordination
 - 5.1 The Corporate Strategy
 - 5.2 Sensible corporate strategies: Instruments and Methods
 - 5.3 Strategic alliances in the context of supply chain management
 - 5.4 Requirements for successful cooperation
 - 5.5 Bundling of activities and process adjustments in cooperations
- 6. Supply, disposal and recycling strategies
 - 6.1 Supply strategies
 - 6.2 Disposal strategies
 - 6.3 Recycling, reuse/recycling and the corresponding strategies
- 7. Quality assurance
 - 7.1 Quality management systems
 - 7.2 Quality Assurance in Supply Chain Management
 - 7.3 Methods in quality management
 - 7.4 Instruments in organizational design
- 8. Information retrieval
 - 8.1 Information Technology in Supply Chain Management
 - 8.2 Business Software
 - 8.3 The Balanced Scorecard as a control instrument

Supply Chain Risk Management and Controlling

Course Code: MWCH02_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

Global value networks prove to be particularly dynamic and sometimes fragile constructions. This observation draws attention to two important aspects of SCM: On the one hand, the need to develop an effective and efficient controlling system for such supply chains. The controlling information generated via key figure systems can make important contributions to the stabilization and optimization of the value-added network. On the other hand, to the necessity of a systematic risk management, with the focus on early identification and future prospects.

Course Outcomes

On successful completion, students will be able to

- assess tasks of the controlling department and evaluate problems in implementation of controlling systems in supply chains.
- assess the significance of key figures in supply chain controlling and know how these are used.
- reflect on instruments of SC controlling and determine combinations of classical and innovative controlling instruments.
- determine when SCM software is used in controlling and what is required for their implementation.
- explain the tools of controlling and apply them in practice.
- name and explain options that influence the success of a supply chain, why risk management is carried out within supply chains and compatible strategies for supply chains.
- understand the organizational design with System Dynamics and the use in the supply chain management.

Contents

1. Basics of controlling in and of supply chains
 - 1.1 Conceptual design of controlling in supply chain management systems
 - 1.2 The importance of controlling in the supply chain
 - 1.3 Cost Tracking
 - 1.4 Different types of supply chain controlling
2. Key figure systems in the supply chain
 - 2.1 Meaning of key figures
 - 2.1 Types of key figures in the supply chain

- 2.2 Visualization of key figures
- 3. Instruments in Supply Chain Controlling
 - 3.1 SCOR models as control instruments
 - 3.2 From traditional to innovative instruments
- 4. Controlling the Supply Chain in Connection with Information Technology
 - 4.1 ERP Systems
 - 4.2 CRM and SCM Systems
 - 4.3 Case study for the implementation of an SCM system
 - 4.4 Success Factors for the Use of SCM Software
- 5. Tools of Controlling in the Supply Chain
 - 5.1 Activity-Based Costing
 - 5.2 Benchmarking
- 6. Risk Management in the Supply Chain
 - 6.1 Risks in the Supply Chain
 - 6.2 Sources of risk in the supply chain
 - 6.3 Risks and Business Success
- 7. Risk policy strategies in the supply chain
 - 7.1 Risk Management within the Supply Chain
 - 7.2 Risk Analysis
 - 7.3 Risk Assessment
 - 7.4 Risk provisioning
- 8. Organizational design through systems thinking and simulation approaches
 - 8.1 Fundamentals of organizational design
 - 8.2 System Dynamics: System thinking and simulation
 - 8.3 Active Data Warehousing as a technological approach for supply chain controlling and risk management

Module Contents

Global Branding

- Positioning of brands
- Branding
- International brand management
- Brand Controlling
- Measurement of brand status and brand equity

Customer Relationship Marketing

- Concept and basics of Customer Relationship Marketing (CRM)
- Customer Relationship Strategies
- Customer acquisition, customer retention and customer recovery
- Electronic Customer Relationship Marketing (eCRM)
- Operational and analytical CRM processes

Learning Outcomes

Global Branding

On successful completion, students will be able to

- identify and understand the key challenges for international brands
- recognize the current strategy of a brand.
- analyze the brand equity of a brand.
- identify the factors that could lead to the increase or loss of consumer-based brand equity.
- develop well-founded ideas for future design options for a brand strategy.

Customer Relationship Marketing

On successful completion, students will be able to

- explain procedures for customer value-oriented analysis of strategic customer portfolios.
- understand the planning, implementation and control of value-oriented customer relationship strategies
- decide whether customer relationships should be systematically developed, deepened or actively terminated, taking into account the company, customer and competitive situation
- understand the high importance of the relational benefits, their brand- and personal determining factors as well as their value-enhancing character for the company.
- organize the structures and processes of relationship marketing with the help of modern business development in such a way that the contribution to value creation in the company is maximized.

Global Branding

Course Code: MWMA01_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

Strong brands create a strong appeal to customers, employees, stakeholders and investors and increase the commitment of employees to the company. They create sustainable value. The management of national and international brands is therefore at the heart of market-oriented corporate management. At a time when products, prices and distribution are becoming more and more similar worldwide, the brand is becoming increasingly important for creating and expanding long-term, profitable customer relationships. Global growth in international markets poses particular challenges for the brand management of companies.

Course Outcomes

On successful completion, students will be able to

- identify and understand the key challenges for international brands
- recognize the current strategy of a brand.
- analyze the brand equity of a brand.
- identify the factors that could lead to the increase or loss of consumer-based brand equity.
- develop well-founded ideas for future design options for a brand strategy.

Contents

1. Necessity and Importance of Brand Management
 - 1.1 What Exactly is a Brand?
 - 1.2 General Conditions on National and International Markets
 - 1.3 Relevance of Brands for Customers
 - 1.4 Relevance of Brands for Companies
2. Goal of Brand Management
 - 2.1 Brand Equity as a Control Parameter for the Definition of Brand Objectives
 - 2.2 The Brand Steering Wheel for Brand Identity Development
 - 2.3 Developing the Personality of a Brand
3. Positioning of Brands
 - 3.1 What is Brand Positioning?
 - 3.2 Different Positioning Goals for Brands

- 3.3 Repositioning of Brands
- 3.4 Implementation of the Desired Brand Position
- 3.5 The Characteristics of Brand Globalization
4. Branding of Products
 - 4.1 Defining the Brand Name
 - 4.2 Developing the Trademark
 - 4.3 Adapting the Product and Packaging Design
 - 4.4 Creating the Brand Look
 - 4.5 Knowing and Applying Trademark Rights
5. Application of the Brand Elements in the Marketing Mix
 - 5.1 Designing Brand Communication
 - 5.2 Integrating Brand Communication
 - 5.3 Balancing the Marketing Mix
6. Strategic Brand Management and Brand Types
 - 6.1 Creating Mono, Family, and Umbrella Brands
 - 6.2 Management of Brand Portfolios and Brand Architectures
 - 6.3 Brand Alliances
7. Special Features of Brand Management
 - 7.1 Brand Management in Capital Goods Markets
 - 7.2 Trademarks
 - 7.3 Personal Branding
 - 7.4 Employer Branding
8. International Brand Management
 - 8.1 Market Entry Strategies
 - 8.2 Product Standardization and Adaptation of Brand Elements
 - 8.3 The Image of the Country of Origin
9. Brand Controlling
 - 9.1 Systematics of Trademark Controlling
 - 9.2 Measuring Central Control Variables
 - 9.3 Qualitative Measurement Methods
10. Measurement of Brand Status and Brand Equity
 - 10.1 Reasons for Brand Value Measurement

10.2 Diagnostic Measurements of Brand Status

10.3 Evaluative Measurements of Brand Equity

Customer Relationship Marketing

Course Code: MWMA02_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

The ability of a company to permanently bind customers to its products and/or services through systematic relationship marketing and to continuously increase customer lifetime value is one of the most value-adding activities in business practice. Customer relationship marketing comprises the development, intensification and securing of lasting and profitable customer relationships. With this understanding, the course provides basic orientation knowledge that is essential for understanding the complex CRM approach. In addition to a comprehensive explanation of the essential terms and interrelationships, management concepts are presented which can be used to design the individual phases of the customer relationship in a profitable and customer-oriented manner.

Course Outcomes

On successful completion, students will be able to

- explain procedures for customer value-oriented analysis of strategic customer portfolios.
- understand the planning, implementation and control of value-oriented customer relationship strategies
- decide whether customer relationships should be systematically developed, deepened or actively terminated, taking into account the company, customer and competitive situation
- understand the high importance of the relational benefits, their brand- and personal determining factors as well as their value-enhancing character for the company.
- organize the structures and processes of relationship marketing with the help of modern business development in such a way that the contribution to value creation in the company is maximized.

Contents

1. Begriff und Grundlagen des Customer-Relationship-Managements (CRM)
 - 1.1 Konzept und Begriff des CRMs
 - 1.2 Bedeutung des CRMs für das Unternehmen
 - 1.3 Kundenbeziehungszyklus und Erfolgskette der Kundenbindung
 - 1.4 Strukturen und Prozesse
2. Kundenbeziehungsstrategien
 - 2.1 Determinanten der Kundenbindung

- 2.2 Verhaltenswirkung beim Kunden
- 2.3 Ermittlung des Kundenwerts
- 3. Kundengewinnung
 - 3.1 Strategien der Kundenakquisition
 - 3.2 Instrumente der Neukundengewinnung
 - 3.3 Neukundenmanagement
- 4. Kundenbindung
 - 4.1 Kundenbindungsmanagement
 - 4.2 Kundenprogramme und andere Kundenbindungsinstrumente
 - 4.3 Beschwerdemanagement
- 5. Kundenrückgewinnung
 - 5.1 Rückgewinnungsmanagement
 - 5.2 Analyse der Abwanderung
 - 5.3 Instrumente der Kundenrückgewinnung
- 6. Operative und analytische CRM-Prozesse
 - 6.1 IT-Systeme im CRM
 - 6.2 Operatives CRM: Kampagnenmanagement und Leadmanagement
 - 6.3 Analytisches CRM: Datenverarbeitung und Datenanalyse
 - 6.4 Social CRM
- 7. CRM in ausgewählten Sektoren
 - 7.1 CRM im Konsumgüterbereich
 - 7.2 CRM im Investitionsgüterbereich
 - 7.3 CRM im Dienstleistungssektor

Module Contents**Introduction to Cloud Computing and Serverless Computing**

- Cloud Computing Basics
- Service and Deployment Models for Cloud Computing
- Security and Privacy in the Cloud
- Cloud Computing Provider
- Typical Business Applications in the Cloud

Project: Cloud Computing

Identification of a use case, ideation, design and development of a custom cloud application, that runs on a cloud provider such as Amazon AWS or Microsoft Azure.

Learning Outcomes**Introduction to Cloud Computing and Serverless Computing**

On successful completion, students will be able to

- know and understand definitions and categorizations of cloud computing,
- describe the underlying technologies that enable cloud computing,
- explain and evaluate service models of the cloud,
- understand and assess security risks of cloud solutions for enterprises,
- differentiate between cloud providers on the market and compare their services,
- evaluate business applications in the cloud.

Project: Cloud Computing

On successful completion, students will be able to

- plan, implement and document a cloud based development project,
- identify a suitable cloud service provider and assess their available services for deployment of a recipe-based cloud architecture,
- identify and evaluate typical problems in different project phases of cloud solution development by using appropriate methods,
- answer and evaluate business-relevant questions for evaluating a cloud solution.

Introduction to Cloud Computing and Serverless Computing

Course Code: DLMWIWCC01_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

Cloud computing stands for technical services, software products and infrastructures that can be called up at any time and are provided decentrally via the Internet. They cover the increasing requirements of the digital corporate world with scalable and flexible solutions. The aim of this course is therefore to teach basic concepts as well as service and deployment models of cloud computing. The course enables students to identify and evaluate suitable use cases in the business world for cloud solutions. The course first reviews basic cloud computing terminology and classifications. Then it describes necessary technology that have made cloud computing possible. Afterwards, opportunities and risks of using cloud solutions are reflected and evaluated. Based on this, typical cloud service models are discussed and essential security concepts for cloud solutions are presented. After an overview of central players in the cloud market, typical use cases in the business world are shown. Additionally to the technical aspects, this course also provides a basic understanding of the use and usability of cloud solutions in the business environment.

Course Outcomes

On successful completion, students will be able to

- know and understand definitions and categorizations of cloud computing,
- describe the underlying technologies that enable cloud computing,
- explain and evaluate service models of the cloud,
- understand and assess security risks of cloud solutions for enterprises,
- differentiate between cloud providers on the market and compare their services,
- evaluate business applications in the cloud.

Contents

1. Cloud Technologies Basics
 - 1.1 Definition and Categories of Cloud Computing
 - 1.2 History and Evolution of Cloud Computing and its Technology
 - 1.3 Distinguishing Cloud Computing from related Concepts (Grid Computing, ASP, etc.)
 - 1.4 Opportunities and Risks of using Cloud Computing

2. Technologies enabling Cloud Computing
 - 2.1 Internet/Web 2.0
 - 2.2 Data Center
 - 2.3 Virtualization
 - 2.4 Containerization
3. Service Models in the Cloud
 - 3.1 Infrastructure as a Service (IaaS)
 - 3.2 Platform as a Service (PaaS)
 - 3.3 Software as a Service (SaaS)
 - 3.4 Function as a Service (FaaS).
4. Operation Models for Cloud Computing
 - 4.1 Public Cloud
 - 4.2 Private Cloud
 - 4.3 Community Cloud
 - 4.4 Hybrid Cloud
5. Cloud Security and Privacy
 - 5.1 Typical Security Risks of Applications, Interfaces and Data
 - 5.2 Best Practices for Cloud Encryption and Security Architecture
 - 5.3 Aspects of Data Protection
6. Cloud Provider
 - 6.1 Overview of the Global Market of Cloud Providers
 - 6.2 Provider Example of the "Big-4" (AWS, IBM, Google and Microsoft)
7. Business Use Cases and Application Examples
 - 7.1 Business Drivers for Cloud Computing
 - 7.2 Typical Application Examples (Data Analytics, ERP Solutions, IOT, Blockchain, and others)

Project: Cloud Computing

Course Code: DLMWIWCC02_E

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | DLMWIWCC01_E |

Course Description

In a world of digital enterprises, cloud computing plays a crucial role in the design of modern, scalable and flexible enterprise solutions. The potential is huge: Moving the company's own infrastructure to the cloud, hosting complex platform and software solutions in the cloud or provide simple and cost-effective services using serverless architectures are some examples of applied Cloud Computing. The aim of this course is to identify a real life use case for cloud computing in the context of an organization and to develop an appropriate cloud-based application prototype. The focus lays on the design and implementation using existing cloud service providers. Furthermore business-critical issues, such as feasibility, scalability, security and costs, are also to be evaluated and documented.

Course Outcomes

On successful completion, students will be able to

- plan, implement and document a cloud based development project,
- identify a suitable cloud service provider and assess their available services for deployment of a recipe-based cloud architecture,
- identify and evaluate typical problems in different project phases of cloud solution development by using appropriate methods,
- answer and evaluate business-relevant questions for evaluating a cloud solution.

Contents

- In the Project: Cloud Computing, students will demonstrate the knowledge, skills and competencies to identify, design and develop a cloud-based application prototype for a virtual enterprise. Students will develop ideas and proposals for a solution based on a given problem or an independently identified problem. Based on the selection of a suitable provider, such as Amazon AWS, a specification and design of a proof-of-concept solution is developed and documented. The documentation also considers the evaluation of aspects such as security and scalability.

On successful completion, students will be able to

- identify use cases and evaluate the performance of data-driven approaches.
- understand how domain specific knowledge for a particular application context is required to identify objectives and value propositions for data science use cases.
- appreciate the role and necessity for business-centric model evaluation apposite to the respective area of application.
- comprehend how data are pre-processed in preparation for analysis.
- develop typologies for data and ontologies for knowledge representation.
- decide for appropriate mathematical algorithms to utilize data analysis for a given task.
- understand the value, applicability, and limitations of artificial intelligence for data analysis.

Artificial Intelligence

On successful completion, students will be able to

- remember the historical developments in the field of artificial intelligence.
- analyze the different application areas of artificial intelligence.
- comprehend expert systems.
- apply Prolog to simple expert systems.
- comprehend the brain and cognitive processes from a neuro-scientific point of view.
- understand modern developments in artificial intelligence.

Data Science

Course Code: DLMBDSA01

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

The course provides the framework to create value from data. After an introduction the course covers how to identify suitable use cases and evaluate the performance of data-driven methods. In an interdisciplinary approach, the requirements from a specific application domain need to be understood and transferred to the technological understanding to identify the objectives and value proposition of a Data Science project. The course covers techniques for the technical processing of data and then introduces advanced mathematical techniques and selected methods from artificial intelligence that are used to analyze data and make predictions.

Course Outcomes

On successful completion, students will be able to

- identify use cases and evaluate the performance of data-driven approaches.
- understand how domain specific knowledge for a particular application context is required to identify objectives and value propositions for data science use cases.
- appreciate the role and necessity for business-centric model evaluation apposite to the respective area of application.
- comprehend how data are pre-processed in preparation for analysis.
- develop typologies for data and ontologies for knowledge representation.
- decide for appropriate mathematical algorithms to utilize data analysis for a given task.
- understand the value, applicability, and limitations of artificial intelligence for data analysis.

Contents

1. Introduction to Data Science
 - 1.1 Overview of Data Science
 - 1.2 Terms and Definitions
 - 1.3 Applications & Notable Examples
 - 1.4 Sources of Data
 - 1.5 Structured, Unstructured, Streaming
 - 1.6 Typical Data Sources and their Data Type
 - 1.7 The 4 V's of Data: Volume, Variety, Velocity, Veracity
 - 1.8 Introduction to Probability Theory
 - 1.9 What Are Probabilities and Probability Distributions

- 1.10 Introduction to Bayesian Statistics
- 1.11 Relation to Data Science: Prediction as a Probability
- 2. Use Cases and Performance Evaluation
 - 2.1 Identification of Use Cases for Data Science
 - 2.2 Identifying Data Science Use Cases
 - 2.3 From Prediction to Decision: Generating Value from Data Science
 - 2.4 Evaluation of Predictions
 - 2.5 Overview of Relevant Metrics
 - 2.6 Business-centric Evaluation: the Role of KPIs
 - 2.7 Cognitive Biases and Decision-making Fallacies
- 3. Pre-Processing of Data
 - 3.1 Transmission of Data
 - 3.2 Data Quality and Cleansing of Data
 - 3.3 Transformation of Data (Normalization, Aggregation)
 - 3.4 Reduction of Data Dimensionality
 - 3.5 Data Visualisation
- 4. Processing of Data
 - 4.1 Stages of Data Processing
 - 4.2 Methods and Types of Data Processing
 - 4.3 Output Formats of Processed Data
- 5. Selected Mathematical Techniques
 - 5.1 Linear Regression
 - 5.2 Principal Component Analysis
 - 5.3 Clustering
 - 5.4 Time-series Forecasting
 - 5.5 Overview of Further Approaches
- 6. Selected Artificial Intelligence Techniques
 - 6.1 Support Vector Machines
 - 6.2 Neural Networks and Deep Learning
 - 6.3 Feed-forward Networks
 - 6.4 Recurrent Networks and Memory Cells
 - 6.5 Convolutional Networks
 - 6.6 Reinforcement Learning

6.7 Overview of Further Approaches

Artificial Intelligence

Course Code: DLMAIAI01

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

The quest for artificial intelligence has captured humanity's interest for many decades and has been an active research area since the 1960s. This course will give a detailed overview of the historical developments, successes, and set-backs in AI, as well as the development and use of expert systems in early AI systems. In order to understand cognitive processes, the course will give a brief overview of the biological brain and (human) cognitive processes and then focus on the development of modern AI systems fueled by recent developments in hard- and software. Particular focus will be given to discussion of the development of "narrow AI" systems for specific use cases vs. the creation of general artificial intelligence. The course will give an overview of a wide range of potential application areas in artificial intelligence, including industry sectors such as autonomous driving and mobility, medicine, finance, retail, and manufacturing.

Course Outcomes

On successful completion, students will be able to

- remember the historical developments in the field of artificial intelligence.
- analyze the different application areas of artificial intelligence.
- comprehend expert systems.
- apply Prolog to simple expert systems.
- comprehend the brain and cognitive processes from a neuro-scientific point of view.
- understand modern developments in artificial intelligence.

Contents

1. History of AI
 - 1.1 Historical Developments
 - 1.2 AI Winter
 - 1.3 Notable Advances in AI
2. Expert Systems
 - 2.1 Overview Over Expert Systems
 - 2.2 Introduction to Prolog
3. Neuroscience
 - 3.1 The (Human) Brain

3.2 Cognitive Processes

4. Modern AI Systems

4.1 Recent Developments in Hard- and Software

4.2 Narrow vs General AI

4.3 NLP and Computer Vision

5. AI Application Areas

5.1 Autonomous Vehicles & Mobility

5.2 Personalized Medicine

5.3 FinTech

5.4 Retail & Industry

Salesforce Administrator and Service Cloud Consultant

Using the learning platform Trailhead students will learn to administer the Salesforce platform. At the end of the course the students will be able to manage the Salesforce service cloud. This course is the preparation for the Salesforce Administrator Certification and Salesforce Service Cloud Certification.

Salesforce Sales Cloud Consultant

Using the learning platform Trailhead students will learn how to manage sales processes with Salesforce platform. At the end of the course the students will be able to manage the Salesforce sales cloud. This course prepares for the Salesforce Sales Cloud Consultant Certification.

Learning Outcomes

Salesforce Administrator and Service Cloud Consultant

On successful completion, students will be able to

- define what Salesforce and customer relationship management is.
- describe and compare the different options for importing and exporting data in Salesforce.
- create reports and visualize key business metrics in real-time in Salesforce.
- setup customer service with Salesforce service cloud.
- lead a customer service team in the digital era.
- define service cloud goals and metrics.

Salesforce Sales Cloud Consultant

On successful completion, students will be able to

- setup sales management with Salesforce sales cloud.
- lead a sales team in the digital era.
- create digital engagement on multiple channels.
- define sales cloud goals and metrics.
- deploy sales processes for gathering competitive insights.

Salesforce Administrator and Service Cloud Consultant

Course Code: DLMSFCS01

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

Salesforce is the most used software solution for customer relationship management worldwide. Using the learning platform Trailhead students will learn independently the fundamentals of Salesforce. The course explains how to administrate Salesforce and how to create processes to help supporting teams become more efficient and manage large data volumes within Salesforce. This course prepares students for the Salesforce Administrator Certification and Salesforce Service Cloud Certification.

Course Outcomes

On successful completion, students will be able to

- define what Salesforce and customer relationship management is.
- describe and compare the different options for importing and exporting data in Salesforce.
- create reports and visualize key business metrics in real-time in Salesforce.
- setup customer service with Salesforce service cloud.
- lead a customer service team in the digital era.
- define service cloud goals and metrics.

Contents

- The content on the learning platform focuses on the features and functionality used to maintain a Salesforce implementation. The content provides general knowledge of the features available to end users and the configuration options available to a Salesforce Administrator. Furthermore, the content enables to perform administrative functions using current Salesforce features design solutions using the Service Cloud functionality and to lead the implementation of these solutions within a customer organization.

Salesforce Sales Cloud Consultant

Course Code: DLMSFCS02

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

This course facilitates key aspects of setting up sales management with Salesforce sales cloud on the learning platform Trailhead. The course describes how to implement Salesforce sales cloud and manage it. It enables to make better business decisions based on customer data and to create a sales metrics strategy. The course shows how to create processes to help sales teams become more efficient and manage large data volumes within Salesforce. This course prepares students for the Salesforce Sales Cloud Consultant Certification.

Course Outcomes

On successful completion, students will be able to

- setup sales management with Salesforce sales cloud.
- lead a sales team in the digital era.
- create digital engagement on multiple channels.
- define sales cloud goals and metrics.
- deploy sales processes for gathering competitive insights.

Contents

- The content on the learning platform focuses on designing and deploying solutions that support sales teams and sales processes using Salesforce applications. The content enables to design solutions using the Salesforce sales cloud functionality and to lead the implementation of these solutions within an organization.

Salesforce Platform App Builder

Using the learning platform Trailhead students will learn the fundamentals of Salesforce. At the end of the course, the students will be able to design, build and deploy custom applications. This course prepares for the Salesforce Platform App Builder Certification.

Salesforce Platform Developer

Using the learning platform Trailhead students will learn how to develop own applications, built from various parts of the Salesforce platform. At the end of the course the students will be able to use Apex, JavaScript, Visualforce and basic Lightning components. This course prepares for the Salesforce Platform Developer I and JavaScript Developer I Certification.

Learning Outcomes

Salesforce Platform App Builder

On successful completion, students will be able to

- define what Salesforce and customer relationship management is.
- design the data model, user interface and business logic for custom applications.
- customize applications for mobile use.
- design reports and dashboards.
- manage application security and deploy custom applications.

Salesforce Platform Developer

On successful completion, students will be able to

- develop own applications using Apex and basic Lightning components.
- write SOSL, SOQL and DML statements.
- use Visualforce to build custom user interfaces for mobile and web apps.
- build reusable, performant components that follow modern web standards.
- use JavaScript to handle user interactions.
- use the built-in testing framework to test Apex and Visualforce.

Salesforce Platform App Builder

Course Code: DLMSFDS01

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

Salesforce is the most used software solution for customer relationship management worldwide. This solution can be customized and personalized for the needs of customers, partners and employees. Using the learning platform Trailhead, students will learn independently the fundamentals of Salesforce and the development of customized application. This course prepares students for the Salesforce Platform App Builder Certification.

Course Outcomes

On successful completion, students will be able to

- define what Salesforce and customer relationship management is.
- design the data model, user interface and business logic for custom applications.
- customize applications for mobile use.
- design reports and dashboards.
- manage application security and deploy custom applications.

Contents

- The content on the learning platform focuses on the features and functionality to design, build and deploy custom applications. The content also provides knowledge to define business logic and process automation declaratively. Furthermore, the design and management of the correct data models and the customization of applications for individual needs is included in this course. Thus, the content of this course enables to automate repetitive tasks and to optimize processes in customer organizations.

Salesforce Platform Developer

Course Code: DLMSFDS02

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

The Salesforce platform not only forms the foundation of core Salesforce products like Sales Cloud and Service Cloud, but it is also possible to build own functionality and own applications. Using the learning platform Trailhead, students will learn how to use the programmatic pillars of the Salesforce platform: Lightning components, Apex and Visualforce. This course prepares students for the Salesforce Platform Developer I and JavaScript Developer I Certification.

Course Outcomes

On successful completion, students will be able to

- develop own applications using Apex and basic Lightning components.
- write SOSL, SOQL and DML statements.
- use Visualforce to build custom user interfaces for mobile and web apps.
- build reusable, performant components that follow modern web standards.
- use JavaScript to handle user interactions.
- use the built-in testing framework to test Apex and Visualforce.

Contents

- The content on the learning platform focuses on the development of own functionality and own applications, built from various parts of the Salesforce platform. The content enables to use the programmatic elements Lightning components, Apex and Visualforce. Furthermore, knowledge is provided for data modeling, process automation, user interface design, testing and deployment. Thus, the content of this course enables to extend Salesforce by individual applications to cover the needs in customer organizations.

Project: AI Excellence with Creative Prompting Techniques

In this module, students delve into the world of generative AI applications, creating AI-generated content such as text, images, and videos. They learn to design, analyze, and evaluate different prompting techniques in these systems and apply them within their respective fields of study.

Learning Outcomes**Artificial Intelligence**

On successful completion, students will be able to

- remember the historical developments in the field of artificial intelligence.
- analyze the different application areas of artificial intelligence.
- comprehend expert systems.
- apply Prolog to simple expert systems.
- comprehend the brain and cognitive processes from a neuro-scientific point of view.
- understand modern developments in artificial intelligence.

Project: AI Excellence with Creative Prompting Techniques

On successful completion, students will be able to

- comprehend and implement various prompting techniques in generative AI applications.
- analyze, assess, and combine different prompt techniques for various expected AI outputs.
- implement ethical considerations into the design and execution of various generative AI applications.
- design, implement, and refine effective prompts and their combinations for real-world scenarios through various hands-on exercises.
- showcase creative and innovative thinking and reasoning in the application of advanced prompting techniques to solve multidimensional problems in their specialized area of study.

This course will give a detailed overview of the historical developments, successes, and set-backs in AI, as well as the development and use of expert systems in early AI systems. In order to understand cognitive processes, the course will give a brief overview of the biological brain and (human) cognitive processes and then focus on the development of modern AI systems fueled by recent developments in hard- and software. Particular focus will be given to discussion of the development of "narrow AI" systems for specific use cases vs. the creation of general artificial intelligence. The course will give an overview of a wide range of potential application areas in artificial intelligence, including industry sectors such as autonomous driving and mobility, medicine, finance, retail, and manufacturing.

Course Outcomes

On successful completion, students will be able to

- remember the historical developments in the field of artificial intelligence.
- analyze the different application areas of artificial intelligence.
- comprehend expert systems.
- apply Prolog to simple expert systems.
- comprehend the brain and cognitive processes from a neuro-scientific point of view.
- understand modern developments in artificial intelligence.

Contents

1. History of AI
 - 1.1 Historical Developments
 - 1.2 AI Winter
 - 1.3 Notable Advances in AI
2. Expert Systems
 - 2.1 Overview Over Expert Systems
 - 2.2 Introduction to Prolog
3. Neuroscience
 - 3.1 The (Human) Brain

3.2 Cognitive Processes

4. Modern AI Systems

4.1 Recent Developments in Hard- and Software

4.2 Narrow vs General AI

4.3 NLP and Computer Vision

5. AI Application Areas

5.1 Autonomous Vehicles & Mobility

5.2 Personalized Medicine

5.3 FinTech

5.4 Retail & Industry

Project: AI Excellence with Creative Prompting Techniques

Course Code: DLMPAIECPT01

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|----|------------------------|
| MA | English | | 5 | none |

Course Description

In this course, students explore the exciting world of prompting in various generative AI applications. They involve themselves in hands-on exercises that combine various prompting techniques to create new AI-generated content, including text, images, and videos. Through these exercises, students learn how to effectively use, analyze, combine, and assess these systems within their specialized fields of study.

Course Outcomes

On successful completion, students will be able to

- comprehend and implement various prompting techniques in generative AI applications.
- analyze, assess, and combine different prompt techniques for various expected AI outputs.
- implement ethical considerations into the design and execution of various generative AI applications.
- design, implement, and refine effective prompts and their combinations for real-world scenarios through various hands-on exercises.
- showcase creative and innovative thinking and reasoning in the application of advanced prompting techniques to solve multidimensional problems in their specialized area of study.

Contents

- In this course, students engage in a practical application of a generative AI use case by choosing from the options provided in the extensive supplementary guide. The course presents practical examples as study materials and exercises with both individual and combined prompting techniques for open-source text, image, and video generation use cases. The exercises are crafted to inspire and lead students in executing their distinct generative AI use case work and provide guidance on describing the use case and selecting a mixture of prompting techniques. Additionally, students are led to critically evaluate the design, implementation, and the outcomes from both technical and ethical perspectives.

Master Thesis

Course Code: DLMMTHES01

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|------|--|
| MA | English | | 13.5 | See current study and exam regulations (SPO) |

Course Description

The aim and purpose of the Master's thesis is to successfully apply the subject-specific and methodological competencies acquired during the course of study in the form of an academic dissertation with a thematic reference to the major field of study. The content of the Master's thesis can be a practical-empirical or theoretical-scientific problem. Students should prove that they can independently analyse a selected problem with scientific methods, critically evaluate it and work out proposed solutions under the subject-methodological guidance of an academic supervisor. The topic to be chosen by the student from the respective field of study should not only prove the acquired scientific competences, but should also deepen and round off the academic knowledge of the student in order to optimally align his professional abilities and skills with the needs of the future field of activity.

Course Outcomes

On successful completion, students will be able to

- work on a problem from their major field of study by applying the specialist and methodological skills they have acquired during their studies.
- analyse selected tasks with scientific methods, critically evaluate them and develop appropriate solutions under the guidance of an academic supervisor.
- record and analyse existing (research) literature appropriate to the topic of the Master's thesis.
- prepare a detailed written elaboration in compliance with scientific methods.

Contents

- Within the framework of the Master's thesis, the problem as well as the scientific research goal must be clearly emphasized. The work must reflect the current state of knowledge of the topic to be examined by means of an appropriate literature analysis. The student must prove his ability to use the acquired knowledge theoretically and/or empirically in the form of an independent and problem-solution-oriented application.

Colloquium

Course Code: DLMMTHES02

| Study Level | Language of Instruction and Examination | Contact Hours | CP | Admission Requirements |
|-------------|---|---------------|-----|--|
| MA | English | | 1.5 | See current study and exam regulations (SPO) |

Course Description

The colloquium will take place after submission of the Master's thesis. This is done at the invitation of the experts. During the colloquium, the students must prove that they have fully independently produced the content and results of the written work. The content of the colloquium is a presentation of the most important work contents and research results by the student, and the answering of questions by the experts.

Course Outcomes

On successful completion, students will be able to

- present a problem from their field of study under consideration of academic presentation and communication techniques.
- reflect on the scientific and methodological approach chosen in the Master's thesis.
- actively answer subject-related questions from subject experts (experts of the Master's thesis).

Contents

- The colloquium includes a presentation of the most important results of the Master's thesis, followed by the student answering the reviewers' technical questions.
