## Thermal Adhesive

8349TFM is a 2-part, flame retardant, thermally conductive epoxy adhesive. It is a dark grey, smooth, thixotropic paste that cures to form a hard, durable polymer that is thermally conductive, yet electrically insulating.

This thermal adhesive is most often used to bond heatsinks to CPUs, LEDs and other electronics components.

For a shorter working time, use 8329TFF. For a longer working time, use 8329TFS.

## Features & Benefits

High thermal conductivity

Flame retardant—meet UL 94V-0

1:1 mix ratio

High dimensional stability

Provides strong electrical insulation

Excellent compressive and tensile strength

Bonds well to a wide variety of substances

Strong resistance to humidity, salt water, mild bases, and aliphatic hydrocarbons

SVHC-free

Part #	Packaging	Net Vol.	Net Wt.
8349TFM-45ML	2 Jar Kit	45 mL	73.2 g
8349TFM-200ML	2 Can Kit	200 mL	325 g

## Storage and Handling

Store between 16 and 27 °C in a dry area, away from sunlight (see SDS). To maximize shelf life, recap product firmly when not in use.

## Cure Instructions

Allow to cure at room temperature for 16 hours, or cure the adhesive in an oven at one of these time/temperature options:

Temperature	65 °C	80 °C
Time	20 min	10 min

## Application Instructions

Read the product SDS for more detailed instructions before using this product.

## Recommended Preparation

Clean the substrate with Isopropyl Alcohol, MG #824, so the surface is free of oils, dust, and other residues.

## Can or Jar

1. Stir each part individually to re-incorporate material that may have separated during storage.
2. Measure 1 part by weight of A.
3. Measure 1 part by weight of B.
4. Thoroughly mix parts A and B together.
5. Apply adhesive to the application area.
