

2006 Staticide® Static Sentry

Topical anti-stat in aerosol can

For decades, people have relied on ACL Staticide® topical anti-stats for maximum control of static electricity in the office, laboratories, institutions, and manufacturing. Staticide® Static Sentry uses the same Staticide® surfactants in an aerosol can for easy application and convenience.

Staticide® Static Sentry is ideal for eliminating charge generation on both porous and non-porous materials. Inhibiting tribo-generation has a multitude of benefits including minimizing system errors and downtime for machinery, preventing dust attraction on plastic, and removing static on garments.

Packaged in a special can, the Staticide® Static Sentry can operate at different angles to allow for horizontal spraying.

The formula does not contain substances on the REACH SvHC list or RoHS Directive 2002/95/EC.

Directions:

Shake well. Test substrate for compatibility prior to use. Hold can 6" - 10" from the item's surface and spray lightly and evenly. The aerosol uses "all way around" technology, allowing the user to spray items from a variety of angles.

Spray directly on porous surfaces, such as carpets, clothing, and upholstery. Spot test on delicate fabrics or material. Spray on the outside of garments. Spray between layered garments starting from the outer layer first.

Spray on non-porous surfaces such as equipment, plastic furniture, floors, walls, etc. Allow to dry.

Intended for industrial and commercial use.

Read Safety Data Sheet before using

Product# 2006: 12oz (340g) aerosol can; 12 per case

Note: This formula is available in non-aerosol liquid (water-based) as Heavy Duty Staticide® (#2005, #2002).

Ideal for the following applications:

- Manufacturing and assembly
- Plastic film and office equipment
- Laminate flooring and carpeting
- Protective packaging and carrying trays
- Smocks and ESD protective clothing

FEATURES:

- ✦ Instantly eliminates static charge in less than 2 seconds
- ✦ Resistance: 10^9 - 10^{10} ohms
- ✦ Meets MIL-B-81705, Federal Test Standard 101
- ✦ No tribocharging; prevents dust attraction
- ✦ Safe to use on plastics and fabrics
- ✦ Flammable
- ✦ Made in USA
