

DataView Release Notes – Version 3.63.0006

Released 2023-09-29

Version 3.63.0006

New Features

- Added support for the new NEC 220.87 Load Study Report
- Added support for new instrument models PEL 52 for reporting
- Added support for Cloud services like OneDrive, Google Drive, DropBox, etc... for the DataView documents folder by using the Default Directories screen
- Added the ability to select the path to Download folder in the Default Directories screen
- Added a new screen to the installer program to show user how much hard driver space is available and how much drive space DataView will take to install the application
- Added a new warning screen to the installer to show user if there is not enough space to install the application to the selected drive
- Added updated Help -> About screen and splash screen with new branding

Bug Fixes

- Fixed help file issues where the help file would not launch, received an error, the wrong help file page opened, text corrections or added missing text
- Fixed issue with the Quick Start screen showing additional text and with the box around the buttons at the top of the screen
- Fixed issue with the application update process connecting to web site for the application update
- Fixed issue to add the ability to open the PowerPad IV control panel from the Select Instrument screen
- Fixed issue with the Ground Tester Transfer report having repeated worksheets and added Rho to the correct worksheets
- Fixed issue when opening a control panel from DataView and showing incorrect instrument models
