

Get the Brady printer advantage

Safety and facility identification printers

Get the Brady printer advantage

You know that having the right identification in the right place keeps your facility safer, more efficient and more compliant. But take a look at the signs and labels in your facility:

- Are they handwritten?
- Do they fall off faster than expected?
- Do you have to wait for a label delivery before you get the identification up where you need it?
- Do you have to use an overly complicated printer with software that isn't quite compatible to create your sign or label?

If you answered yes to any of these questions, **you're ready for the Brady printer advantage.**

Whether you're looking for GHS labels, arc flash labels, pipe markers or other workplace visuals, Brady provides a complete line of on-demand printing solutions that are designed to save you time. **And unlike competitive offerings, every part of our printing solutions are designed to keep you running more efficiently. Here's how:**

Faster printing

No need to send artwork to a vendor and wait up to seven days — create and print your label with your custom words, languages and logos when you need it.

Less waste

The only complete solution on the market that includes labels, printers and software with print smart technology that work together to get from start to print in 30 seconds without any resizing, recalibrating or waste.

Full facility applications

You get more than 300 material options that are designed to last in even the toughest environments and meet the highest quality and testing standards.

300+

Integrated into your workflow

When adding a piece of equipment to your facility, you want to make sure that it not only does the work you need, but also that it doesn't make a huge impact on your workflow. With Brady, you get a variety of printer options so you have the flexibility to get the tool that best fits your application needs and workflow.

Stand-alone printers

Ideal for multiple-user and network-free printing

While you have the option to do your label creation on a computer, stand-alone printers have a built-in touchscreen, keyboard and intuitive design wizards so you can easily walk up, create and print without having to be connected to your network. These printers also provide multicolor printing options.

Peripheral printers

Ideal for single-user printing

These compact printers require a desktop or laptop computer and easily fit into your tight areas so you can maximize your workspace to complete your single-color printing tasks.

Inkjet printers

Ideal for full-color printing

Like the peripheral printers, our inkjet printers need a desktop or laptop computer to complete identification tasks, but boast the power of full-color, high-resolution print quality so you can add custom images to your identification.

Compare and contrast

While all of our printers can complete identification tasks in a variety of areas throughout your facility, some printers work better for certain tasks. Use the chart below to see which printers are the best suggested options for your application.

		Stand-Alone Printers				Peripheral Printer	Inkjet Printers	
		S3100	BBP35	BBP37	BBP85	i3300	J2000	J5000
