THE NEXT GENERATION OF DISPLAY

**DTEN IS YOUR CABLE-FREE MEETING SOLUTION**

## DTEN 70" WIRELESS INTERACTIVE DISPLAY

DTen cable-free touch screen display solution lets you wirelessly share a device's content on the 70" interactive display. Super slim design and zero parallax touch feeling let you touch images directly on the screen.

## CABLE-FREE MEETING ROOM

The power cable for the interactive display unit is the only cable required, which is why the DTen offers completely wireless connectivity with your PC or Mac. There's no software required to operate the multi-touch screen and no Wi-Fi set up required. You have 2-way control between the DTen touchscreen display and your Mac or PC with one simple click. Meaning you can give your presentation in front of the large touch screen instead of behind your laptop.

## WRITING AND TOUCH

**Write and Erase as naturally as putting the pencil to a piece of paper.**

Annotate on anything and erase with eraser. DTen also features finger and pen whiteboard writing with virtually zero latency. 10-touch point recognition enriches gestures like two-finger anywhere annotation.

## DTEN NOTE

### Up and running in 3 seconds

We designed the most intuitive interactive solution for our users: use pen to write, use fingers to move or select, and magically use real eraser to erase. Focus on your ideas, not on how to use the machine.

### Canvas with no border limit

Simply write on the available screen. Design workflows, brainstorm, create. Then move to a fresh, new section on the screen with two fingers.

### Save as PDF

No need to take pictures after your discussion any more. DTen Note saves your work as a PDF so you can easily send it to others.

## DTEN SHARE – MIRROR PC/MAC WITH ONE CLICK

### No WiFi Setup. No Software Installation

Maximize your meeting time by covering the essentials instead of wasting time with setup and installation. DTen Share lets you share anything quickly and easily without the frustration of getting your equipment to work.

### Dedicated WiFi Network – Fast and Secure

DTen's built-in WiFi provides a dedicated network for DTen Share. It has private bandwidth, and is a fast and secure connection. Only those with a DTen dongle can access this network.

### No Need to Join Network. No WiFi Setup

DTen Share connects the interactive multi-touch screen display to a provided dongle. There's no setup or installation required. Simply plug the dongle in your PC or Mac and it automatically connects for you.

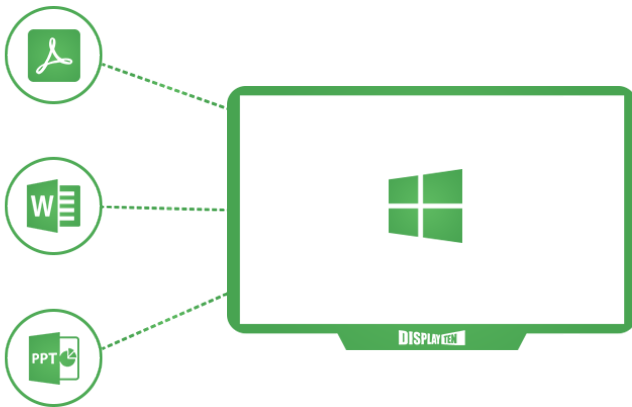

vs.

## TWO-WAY RESPONSIVE CONTROL

You get two-way control between your device and the DTen interactive touch screen display. Whether you're using a PowerPoint presentation or some other file on your computer, you can control what's on the screen from the large interactive display. No need to walk back and forth from your laptop to the display screen.

## OPTIONAL PC MODULE

You can transform your DTen wireless interactive display into a powerful Windows PC with the addition of a PC Module. Video conferencing of your choice and every PC feature you may like.

## OUTDOOR FULL-ANGLE ANTI-SUNLIGHT

Use in Normal Daylight with No Problem. Recognize up to 10 touch points with precision and speed. Multi-touch without broken lines.

# MOBILE VERSION COMING SOON! iOS & Android
