Concrete Curing

With the ACR SRP6 Data Logger

Producers of pre-cast concrete products are using the ACR SRP6 to monitor the concrete curing maturation process. In the past they had to rely on educated guess work or the expensive and time consuming cone-test.Using the SRP6 the process can be monitored and recorded and viewed graphically on any PC, utilizing ACR software. The process can even be monitored in real-time.

Another data-logging solution from ACR Systems.
