Dukane Camera 106 Digital Document Camera

Super High Resolution Images

View high resolution images on your computer monitor, and also project them onto a large screen. The Dukane Camera 106 provides images via a USB cable that plugs into your computer. Instantly you have the ability to view, capture, annotate, create movies, and share images. Simply connect the 6ft. USB cable and you're in operation. No other connection is required, the camera is also powered by the USB cable.

The Camera 106 provides High Definition full color images of 1280x960 resolution. It is completely self adjusting so the user merely has to point the camera head. It automatically views objects in bright sunlight or low levels. It can also focus on objects with a 50 times magnification or look at the room for distant learning applications. It can image the texture of fabric or the moon. With its long flexible 20" neck and rugged sturdy base, the Camera 106 can be easily positioned to view a variety of objects. For rapid image positioning, the head also rotates 180° on the neck.

Special Applied Vision software for the PC or MAC is provided on CD. The software allows the capture of images or a sequence for video streaming. You can annotate, magnify areas, edit, view files in various formats, send e-mail images, obtain time laps sequences, or create a movie. Capture and display scenes in the classroom. Look at graphics, laboratory experiments, test images, groups of images, or other objects with this amazing camera. A 28mm microscope adapter is also included. This camera is an ideal partner to an ImagePro data video projector.
