-------------------------------	-------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------

The PMR1 pocket extension mirror is an adjustable mirror for inspecting nameplates, hardware, or anything else hidden around the corner. It extends to almost two feet to give you easy access in close quarters.

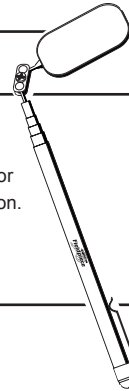

Features

- Telescopes between 5 1/4" and 21 3/4".
- Clips to your pocket just like a pen.
- Pivot control with adjustable tension screw.
- Omnidirectional ball joints for precise mirror positioning.
- 2" x 1" mirror size.

Operator's Guide

ADJUSTING BALL JOINT FRICTION

If you find the mirror not staying in place or too stiff to move, adjust the ball joint friction. Tighten or loosen tension screw until you have the desired mirror movement.

More telescopic tools from Fieldpiece

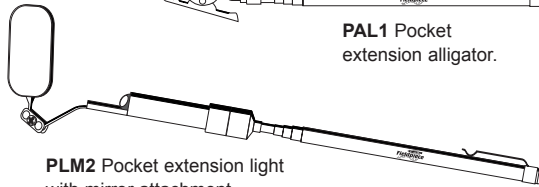

PMG1 Pocket extension magnet.

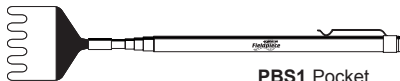

PAL1 Pocket extension alligator.

PLM2 Pocket extension light with mirror attachment.

PBS1 Pocket extension claw.
