

## Instrument Security Procedures

### Models:

Fluke 561

### Product Name:

Noncontact thermometer

### Instrument Description:

Noncontact thermometer

### Memory Description:

This product uses an MSP430F413 Flash memory chip from Texas Instruments. Calibration constants for the unit, stored in the chip, are generated when the unit is sent through its calibration process. These constants are fundamental to the operation of the unit. Data collected during operation of the unit is lost once the unit returns to its standby state.

### Memory Cleaning Instructions:

There is no saved memory.
