8421-51
8422-51

MEMORY HiLOGGER

HIOKI E. E. CORPORATION

Contents

Introduction

- This manual is a quick reference source with examples for the 8420-51, 8421-51, 8422-51 MEMORY HiLOGGER for measurement purposes.
  For more detailed description of operations, refer to the Instruction Manual. In particular, before operating the instrument, be sure to read carefully and understand the Safety Notes and Chapter 2 "Measurement Preparations" (page 21) in the Instruction Manual.
- Refer to the Instruction Manual and the Communications/ Wave Viewer Instruction Manual provided with this instrument.

Safety Notes

The following symbols in this manual indicate the relative impor-
tance of cautions and warnings.

⚠ DANGER	Indicates that incorrect operation presents an extreme hazard that could result in serious injury or death to the user.
⚠ WARNING	Indicates that incorrect operation presents an extreme hazard that could result in serious injury or death to the user.
⚠ CAUTION	Indicates that incorrect operation presents a possibility of injury to the user or damage to the instrument.
NOTE	Indicates advisory items related to performance or correct operation of the instrument.

Other Symbols

🚫	Indicates the prohibited action.
❖	Indicates the reference.

Identification of Controls and Indicators

1

1.1 Identification of Controls and Indicators
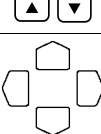

Front Panel

This is the 8420-51.

Buttons Operations

SET UP	Displays the Status Screen.
CH SET	Displays the Channel Screen.
WAVE	Displays the Waveform Screen, and selects the display format of the Waveform Screen.
PRINT	Prints measurement data stored in memory; while measuring, starts and stops real-time printing.
COPY	Prints the screen (or creates a screen image file); while measuring, prints the most recently logged data value.
FEED	Feeds recording paper while pressed.
MONIT	Displays the Monitor Screen.
CARD	Displays the File Screen (for loading and saving measurement data).
▲ ▼	Select and accept settings.
⬠ ⬡	Move the blinking cursor up, down, left and right.
⏪ SCROLL/CURSOR ⏩	Scroll waveforms, move A-B cursors and search for event markers.
SEL	Switches between scrolling waveforms, moving A-B cursors and searching for event markers.
CH	Displays the Channel Setup Window on the Waveform Screen, for entering settings.
CH▲	Changes the setting channel to the previous channel.
CH▼	Changes the setting channel to the next channel.
▲ RANGE ▼	Selects the range for each channel.
▲ POSN ▼	Selects the zero position for each channel.
▼ TIME/DIV ▲	Sets the time per division on the horizontal axis.
START /MARK	Starts measurement; while measuring, the LED above the button is lit.
STOP	Pressing this button twice stops measurement.

Upper Panel

PC Card Slot
A PC Card can be inserted here.

Eject button
Pressing this button ejects the PC Card.

Pulse Probe Connector (PULSE)
These are the pulse input terminals, for connecting the 9641CONNECTION CABLE.
10BASE-T Ethernet Connector
The 9642 LAN CABLE can be connected here.

RS-232C Connector
The 9612 RS-232C CABLE or 9721 RS-232C CABLE can be connected here.

Lower Panel

AC Adapter Connector
The AC adapter can be connected here.

Power Switch (POWER)
Turns the power on and off.

Contrast Adjustment Knob (CONTRAST)
Adjusts display contrast.
External Trigger Terminal (EXT TRIG)
External trigger source input.

Trigger Output Terminal (TRIG OUT)
Trigger signals are output at these terminals.

GND Terminal
This is the signal ground for use with the trigger terminal.

Right Panel

Analog Input Terminal Block
These are the analog input terminals.
The 8420-51 has 8 input channels, the 8421-51 has 16 input channels, and the 8422-51 has 32 input channels.
Bottom Panel
Battery Compartment
Contains the 9447 BATTERY PACK.

Display Screen and Setting Items

2

This chapter describes the major screens of the Memory HiLogger and parameters to be set on each screen.

2.1 Status Screen

Set the recording interval.
❖ See Section 4.2.

Set the recording period. The recording period is restricted, depending on the measurement channel settings.
❖ See Section 4.4.

Set the measurement channels on or off (input settings). Only those channels enabled here can be set in the channel screen.
❖ See Section 4.5.

Make the digital filter setting.
❖ See Section 4.7.

Measurement Examples $\quad$ *3*

3.1 Voltage Measurement

In the explanation below, we measure AC voltage fluctuations for a one-week period using an AC transducer (0~10 VDC rms value output for 0~150 VAC) as an example. Monitor voltage fluctuations for a one-week period by measuring the output voltage every minute.

Settings:
Voltage is input to Channel 1.
Recording interval: 1 min., Time axis: 1 hour, Recording period: 7 days
Data will be saved onto a PC card in real time.

Transducer

Memory HiLogger

AC Adapter

Input Cables

Instrument and Accessories Required for Measurement
• Memory HiLogger
• AC adapter
• PC card
• Input cables
• Flat blade screwdriver

⚠️ **DANGER**
- **To avoid the danger of electric shock, never connect the power line to which the measurement cable is connected to this unit while the power line is live.**
- **Never apply more than 30 Vrms AC or 60 VDC between analog inputs, or between analog inputs and chassis ground.**

1. Make sure the instrument is OFF.

2. Connect the AC adapter to the instrument.

3. Plug the AC adapter into the power outlet.
❖See Section 2.1 "Connecting Power" (page 21) of Instruction Manual.
4. Insert the PC card.
❖See Section 7 "Saving Measurement Data" (page 113) of Instruction Manual.
5. Remove the terminal board cover.
6. Using the supplied flat blade screwdriver, connect the measurement cables to channel 1 on the terminal board.
Be sure that the polarity of the cable connection is correct.

❖See Section 2.2 "Connecting Measurement Cables" (page 25) of Instruction Manual.

            P1□□□□P4
Auto Save (Binary(Real) [AUTO    ]
Save Mode     Normal    Full
```

Select "**Binary (Real)**."

NOTE   If a file name has already been entered, the file is automatically saved with that name. For continuous saving, a number is appended to the file name.
❖See Section 14 "Text Entry Procedure" (page 225) of Instruction Manual.
If no file name has been entered, default file naming is used ([AUTO, AUTO0001], etc.)
❖See Section 7.5 "Automatic Data Saving" (page 133) of Instruction Manual.

Set the Save Mode to "Normal" and "Full."

Move the blinking cursor to the position shown.

```
Auto Save  Binary(Real) [AUTO    ]
Save Mode       (Normal)   Full
```

Select "**Normal**."

Move the blinking cursor to the position shown.

```
Auto Save  Binary(Real) [AUTO    ]
Save Mode       Normal    Full

Digital Filter            OFF
```

Select "**Full**."

NOTE   One file is created for each measurement session. When the PC card is full, saving ends.
❖See Section 7.5 "Automatic Data Saving" (page 133) of Instruction Manual.

Set the digital filter to "60 Hz."

Move the blinking cursor to the position shown.

```
Auto Save  Binary(Real) [AUTO    ]
Save Mode          Normal     Full

Digital Filter              60Hz
```

Select "**60 Hz**."

NOTE A digital filter can be used on analog channels to remove noise in the input signals.
The longer the recording interval is, the larger the noise reduction effect becomes; this ensures highly accurate measurement with little scatter.
Set the filter to 50Hz in areas where the supply frequency is 50Hz.

Display the Analog Channel Screen.

CH SET

Display the Analog Channel Screen for channel 1.

```

Enter the following:
A: +0.0000E+00 → +0.0000E+00
B: +1.0000E+01 → +1.5000E+02
❖ See Section 5.4 "Setting Scaling" (page 86) of Instruction Manual.
Upper limit value: 150 V, Lower limit value: 0 V

NOTE

• Setting the scaling to correspond to the transducer conversion ratio allows the measurement values to be read off directly.
• With the origin Posn setting at "0%" the range from 0 to 150 V is displayed.

10. Press the ⌜START/MARK⌝ key to start measurement.

The Waveform Screen is displayed.
Press the ⌜STOP⌝ key twice to abandon measurement while it is in progress.

11. Measurement ends when seven days has elapsed.

3.2 Temperature Measurement Using a Thermocouple (K)

Measure indoor temperature changes using a thermocouple. Observe temperature changes by measuring the temperature every second.

Settings:
Temperature is input to Channel 1.
Recording interval: 1 sec., Time axis: 1 min., Recording period: Continuous
Data is viewed on the screen of the Memory HiLogger after measurement is complete.

Thermocouple (K)

AC Adapter
Memory HiLogger

Instrument and Accessories Required for Measurement
• Memory HiLogger
• AC adapter
• Thermocouple (K)
• Flat blade screwdriver

NOTE   Because data is saved to the internal memory, a PC card is not used. When the measurement extends over a long period, we recommend you save data to a PC card in real time to avoid data being lost in the event of a power outage.

⚠ **WARNING** | **To avoid the danger of electric shock, never connect the power line to which the thermocouple is connected to this unit while the power line is live.**

1. Make sure the instrument is OFF.

2. Connect the AC adapter to the instrument.

3. Plug the AC adapter into the power outlet.
❖See Section 2.1 "Connecting Power" (page 21) of Instruction Manual.
4. Remove the terminal board cover.

5. Using the supplied flat blade screwdriver, connect the thermocouple (K) to channel 1 on the terminal board.
Be sure that the polarity of the cable connection is correct.

❖See Section 2.2 "Connecting Measurement Cables" (page 25) of Instruction Manual.

8422-51
Recommended Lead Wire
Wire diameter : 0.32 mm
Wire stripping length : 5 mm

5 mm

**6.** Replace the terminal board cover, to protect the terminal board, and for safety. If the input terminals are exposed to a strong wind, this can upset the thermal balance of the input unit, and cause incorrect readings.

7. Attach the thermocouple (K) to the object whose temperature is to be measured.

8. Turns on the power switch.

❖See Section 2.3 "Powering On/Off" (page 31) of Instruction Manual.

9. Set the parameters of this instrument.

❖See Section 6 "Waveform Screen" (page 99) of Instruction Manual.

3.3 Integrating the Pulse Output from a Power Meter

Prepare a watt-hour meter capable of outputting 50,000 pulses/kWh pulse and capture pulses from the meter to measure the integrated watt-hour for a one-month (30-day) period. Observe the integrated watt-hours for a one-month period by measuring the output pulses of the watt-hour meter every 30 minutes.

Settings:
Pulse is input to Pulse Channel 1 (P1).
Recording interval: 30 min., Time axis: 1 day, Recording period: 30 days

Instrument and Accessories Required for Measurement
• Memory HiLogger
• AC adapter
• PC card
• Input cables
• Flat blade screwdriver
• 9641 CONNECTION CABLE

⚠️ **WARNING**

To avoid the danger of electric shock, never connect the power line to which the measurement cable is connected to this unit while the power line is live.
1. Make sure the instrument is OFF.

2. Connect the AC adapter to the instrument.

3. Plug the AC adapter into the power outlet.
   ❖See Section 2.1 "Connecting Power" (page 21) of Instruction Manual.

4. Insert the PC card.
   ❖See Section 7 "Saving Measurement Data" (page 113) of Instruction Manual.

5. Remove the terminal board cover.

6. Connect the 9641 CONNECTION CABLE to this instrument.
The 9461 CONNECTION CABLE is terminated as follows.

Ends of the 9641 CONNECTION CABLE

P1 White (H)
P1 Red (L)

P2 Yellow (H)
P2 Black (L)

P3 Green (H)
P3 Blue (L)

P4 Gray (H)
P4 Brown (L)

Shield
(connect to instrument ground)

❖See Section 2.2.3 "Connecting the 9641 CONNECTION CABLE (for pulse input)"
(page 29) of Instruction Manual.

7. Connect the 9641 CONNECTION CABLE to the pulse output terminals
of the power meter.
For details of connections, refer to the instructions supplied with the
power meter, and take great care that the connections are correct.

For P1, the white lead is high, and the red lead is low.

8. Turns on the power switch.

❖See Section 2.3 "Powering On/Off" (page 31) of Instruction Manual.

9. Set the parameters of this instrument.

Move the blinking cursor to the position shown.

```
┌Scaling───────────────────TYPE 1┐
│ P1   OFF  ᵖᵤ [c      ] ⊷ ↵      │
│ 1 pulse  =[000001.00 ][c      ] │
│ 1[c     ]=[000001.00 ]pulse     │
└─────────────────────────────────┘
```

Set the display format to "**ENG**."
Move the blinking cursor to the position shown.

```
┌Scaling───────────────────TYPE 2┐
│ P1   ENG  ᵖᵤ [c      ] ⊷ ↵      │
│ 1 pulse  =[000001.00 ][c      ] │
│ 1[c     ]=[000001.00 ]pulse     │
└─────────────────────────────────┘
```

Set the scaling method to "**TYPE 2**."
Move the blinking cursor to the position shown.

```
┌Scaling───────────────────TYPE 2┐
│ P1   ENG  ᵖᵤ [kWh      ↰ ↵      │
│ 1 pulse  =[000001.00 ][kWh    ] │
└─────────────────────────────────┘
```

Set the scaling unit to "**kWh**."
Move the blinking cursor to the position shown.

```
┌Scaling───────────────────TYPE 2┐
│ P1   ENG  ᵖᵤ [kWh    ] ⊷ ↵      │
│ 1 pulse  =[000020.00u][kWh    ] │
│ 1[kWh   ]=[000050.00k]pulse     │
└─────────────────────────────────┘
```

Enter the following:
1 [kWh] = [50000.00] pulse
❖ See Section 5.4 "Setting Scaling" (page 86) of Instruction Manual.
Upper limit value: 50,000 kWh, Lower limit value: 0
NOTE

When scaling is selected, measurements will be read directly in kWh units.

10. Press the [START/MARK] key to start measurement.

Press the [STOP] key twice to abandon measurement while it is in progress.

11. Measurement ends when a month has elapsed.
