

# **POWER QUALITY ANALYZER PW3198**

Power Measuring Instruments

Record and Analyze Power Supply Problems Simultaneously with a Single Unit

# The New World Standard for Power Quality Analysis

205 Westwood Ave Long Branch, NJ 07740 1-877-742-TEST (8378) Fax: (732) 222-7088 salesteam@Tequipment.NET

### **Never Miss the Moment**

- Detect power supply problems and perform onsite troubleshooting
- Do preventive maintenance to avert accidents by managing the power quality

### **CAT IV-600V Safety Standard**

- Meets the CAT IV safety rating required to check an incoming power line
- Safe enough to measure up to 6,000Vpeak of transient overvoltage

#### **Easy Setup** Function with PRESETS

- Just select the measurement course, wiring, and clamps
- Automatic one-step setup based on measurement conditions

### Compliant with New International Standards

- International power quality measurement standard IEC 61000-4-30 Edition 2 Class A
- High precision with a basic voltage measurement accuracy of 0.1%

HIOKI company overview, new products, environmental considerations and other information are available on our website.

The number of power supply problems is increasing as power systems are becoming more and more complicated - all due to the rising use of power electronics devices plus a growing installed base of large systems and distributed power supplies. The quickest way to approach these problems is to understand the situation quickly and accurately. The PW3198 Power Quality Analyzer is ready to effectively solve your power supply problems.

# **Troubleshooting**

- ✓ Understand the actual power situation at the site where the problem is occurring (e.g., the equipment malfunction, failure, reset, overheating, or burning damage).
- ✓ Ideal for troubleshooting solar and wind power generation systems, EV charge stations, smart grids, tooling machines, OA equipment (e.g., computers, printers, and UPS), medical equipment, server rooms, and electrical equipment (e.g., transformers and phase-advancing capacitors).

# Field Survey and Preventive Maintenance

- ✓ Perform long-term measurements of the power quality and study problems that are difficult to detect or that occur intermittently.
- Maintain electrical equipment and check the operation of solar and wind power generation systems.
- Manage the parameters with a control set point, such as a voltage fluctuation, flicker, and harmonic voltage.

# Power (Load) Survey

Study the power consumption and confirm system capacity before adding load.

# Advanced Features for Safe, Simple, and Accurate Measurements

#### International Standard IEC61000-4-30 Edition 2 Class A

Class A is defined in the international standard IEC61000-4-30, which specifies compatibility with power quality parameters, accuracy, and standards to enable comparison and discussion of the measurement results of different measuring instruments.

The PW3198 is compliant with the latest IEC61000-4-30 Edition 2 Class A standard. The instrument can perform measurements in accordance with the standard, including continuous gapless calculation, methods to detect events such as dip, swell, and instantaneous power failure, and time synchronization using the optional GPS box.

### CAT IV-600V Safety

The PW3198 is compliant with the measurement category CAT IV - 600V and can also safely test the incoming lines for both single-phase and three-phase power supplies.

### Easy to set up - Just select the measurement course and the PW3198 will do the rest

Simply choose the course based on the measurement objective and the necessary configurations will be set automatically.

U Events	Record voltage and frequency and detect errors simultaneously.
Standard Power Quality	Record voltage, current, frequency, and harmonic, and detect errors simultaneously.
Inrush current	Measure the inrush current.
Recording	Record only the TIME PLOT Data but do not detect errors.
EN50160	Perform measurements in accordance with EN50160.

### Highly Accurate, Broadband, Wide Dynamic Range Makes for Reliable Measurements

# Voltage Measurement Range Transient overvoltage Line-to-line voltage (3P4W) Line-to-line voltage (1P2W, 1P3W, 3P3W) Phase voltage (1P2W, 1P3W, 3P4W) 1300V

Both low and high voltages can be measured in a single range.

#### Voltage Frequency Range

Wide range from DC voltage to 700 kHz

#### Basic Measurement Accuracy (50/60 Hz)

Voltage	±0.1% of nominal voltage
Current	±0.2% rdg. ±0.1% f.s. + Clamp-on sensor accuracy
Power	±0.2% rdg. ±0.1% f.s. + Clamp-on sensor accuracy

World's highest level of basic measurement accuracy. Extremely accurate voltage measurement without the need to switch ranges.

## Transient Overvoltage

Transient overvoltage can also be measured in a range between the maximum 6,000 V and minimum 1 µs (2 MS/s).

#### High-order Harmonic

The PW3198 is the first power quality analyzer that can measure the high-order harmonic component of up to 80 kHz.

# PW3198 Never Misses the Moment a Power Supply Failure Occurs

The PW3198 can measure all waveforms of power, harmonic, and error events simultaneously. When a problem occurs with the equipment or system on your site, the PW3198 will help you detect the cause of the problem early and solve it quickly. You can depend on the PW3198 to monitor all aspects of your power supplies.

# Measure All Parameters at the Same Time

#### Acquire the Information You Need Quickly by Switching Pages (RMS Value)

Just connect to the measurement line, and the PW3198 will simultaneously measure all parameters, such as power and harmonic. You can then switch pages to view the needed information immediately.

#### **DMM Display**

Display parameters such as voltage, current, power, power factor, and integral power in a single window.

#### Waveform Display

Display the voltage and current waveforms on channels 1 to 4 one above the other in a single window.

-channel Waveform Display

Display the voltage and current waveforms on channels 1 to 4 individually.

#### Vector Display

Display the measured value and vector of the voltage and current of each order harmonic

Harmonic Bar Graph Display

Display the RMS value and phase angle of harmonics from the 0th order to the 50th either in a graph or as numerical values.

#### Reliably Detect Power Supply Failures (Event)

To detect power supply failures, measurement does not need to be performed multiple times under different conditions. The PW3198 can always monitor and reliably detect all power supply failures for which detection is enabled.

#### Transient Overvoltage (Impulse)

A transient overvoltage is generated by a lightning strike or a contact fault or closed contact of a circuit breaker and relay, and often causes a steep voltage change and a high voltage peak.

### Voltage Dip (Voltage Drop)

Voltage drops for a short time as a result of large inrush current generated in the load by, for example, a starting motor.

#### Interruption

The power supply stops instantaneously or for a short or long time because electrical power transmission is stopped as a result of a lightning strike, or because the circuit breaker is tripped by a power supply short circuit.

#### Frequency Fluctuations

An excessive increase or decrease of the load causes the operation of a generator to become unstable, resulting in frequency fluctuations.

#### Harmonic

Harmonic is generated by a semiconductor control device installed in the power supply of equipment, causing distortion of voltage and current waveforms.

### Voltage Swell (Voltage Rise)

A voltage swell is generated by a lightning strike or a heavily loaded power line being opened or closed, causing the voltage to rise instantaneously

#### Inrush Current

A large current flows instantaneously at the moment electrical equipment, a motor, or similar devices are nowered on

#### High-order Harmonic

Voltage and current waveforms are distorted by noise components generated by a semiconductor control device or the like installed in the power supply of electronic equipment.

#### Unbalance

An increase or decrease in the load connected to each phase of the three-phase power supply or an unbalanced operation of equipment and devices causes the load of a particular phase to become heavy so that voltage and current waveforms are distorted, voltage drops, or negative phase sequence voltage is generated.

# Simultaneous Recording of TIME PLOT Data and Event Waveforms

#### **TIME PLOT Data**

### **TIME PLOT Recording of All Parameters**

The PW3198 can simultaneously record 8,000 or more parameters, such as voltage, current, power, power factor, frequency, integral power, harmonic, and flicker, at the specified recording interval. The PW3198 never fails to capture the peak because it performs calculations continuously and records the maximum, minimum, and average values within the recording interval.

### **Event Waveforms**

### Capture up to 55,000 Instantaneous Waveforms of Power Supply Failures

The PW3198 can record up to 1,000 instantaneous waveforms of power supply failures (up to 55,000 when repeat recording is set to ON) while performing TIME PLOT recording.

#### vent List

This list records instantaneous waveforms of power supply failures (events), such as a voltage drop or inrush current, along with the time or other information. Events are always monitored, regardless of the recording interval of the TIME PLOT recording.

#### Event Waveform

The PW3198 lets you view the instantaneous waveform (200 ms) of a power supply failure in the window.

# Analyze Recorded Data with a PC Using Application Software 9624-50 PQA-HiVIEW PRO

Use Model 9624-50 PQA-HiVIEW PRO (version 2.00 or later) with a PC to analyze the data collected by the PW3198.

#### **Viewer Function**

Display and analyze the data recorded by the PW3198 POWER QUALITY ANALYZER.

#### **Report Creation Function**

Automatically and effortlessly create rich reports for compliance and record management.

**Transient Waveform Window** 

Voltage/current RMS value fluctuation graph, harmonic fluctuation graph, inter-harmonics fluctuation graph, flicker graph, integral power graph, demand graph, total harmonic voltage/current distortion rate list, EN50160 window (Overview, Harmonic, Measurement Results Category), worst case, transient waveform maximum/minimum value list, all event waveforms/detailed list, and setup list

#### **Print Examples**

Inrush Current Event Graph Window

TIME PLOT Recording of Parameters

Harmonics TIME PLOT Window

EN50160

### **Other Functions**

#### **CSV Conversion of Measurement Data**

Convert data in the range specified in the TIME PLOT window into CSV format and then save for further processing. The 9624-50 can also convert event waveforms into CSV format. Open CSV data using any commercially available spreadsheet software for advanced data management and analysis.

#### Even Analyze Data Recorded with Models 3196 and 3197 PQAs

Data recorded with the HIOKI 3196 and 3197 Power Quality Analyzers can also be analyzed

#### **Download Measurement Data via USB/LAN**

Data in the SD card inserted in the PW3198 can be downloaded to a PC via USB or LAN.

#### **EN50160 Display Function**

EN50160 is a power quality standard for the EU. In this mode, evaluate and analyze power quality in accordance with the standard. You can display the Overview, Harmonic, and Measurement Results Category windows.

#### 9624-50 Specifications

Delivery media	CD-R
Operating environment	AT-compatible PC
OS	WindowsXP, WindowsVista(32-bit), Windows7(32/64-bit)
Memory	512 MB or more

# 444

## Useful Functions for a Wide Variety of Applications

#### Large Capacity Recording with SD Card

Data is recorded to a large capacity SD card. The data can be transferred to a PC and analyzed using dedicated application software. If your PC is not equipped with an SD card slot, simply connect a USB cable between the PW3198 and the PC. The PC will then recognize the SD card as removable media.

Repeat record	Recording period
OFF	Max. 35 days Reference value: ALL DATA (all items recorded), repeat recording OFF, and TIME PLOT interval 1 minute or longer)
ON	Max. 55 weeks (about 1 year) Reference value: ALL DATA (all items recorded), repeat recording ON (1 week x 55 times), and TIME PLOT interval 10 minutes or longer)

### Remote Measurement Using HTTP Server Function

You can use any Internet browser to remotely operate the PW3198, plus download the data stored in the SD card using dedicated software (LAN access required).

Conduct off-site remote control with a tablet PC using a wireless LAN router

#### **GPS Time Synchronization**

The PW9005 GPS BOX lets you synchronize the clock on the PW3198 to the UTC standard time. Eliminate time differences between multiple PQAs and correctly analyze measurement data taken by several instruments.

#### Simultaneously Measure Three-phase Lines and Grounding Wire

Apart from the main measurement line, you can also measure the AC/DC voltage on another line using Channel 4.

#### Yes! Simultaneously!

- Measure the primary and secondary sides of UPS
- •Two-line voltage analysis
- •Measure three-phase lines and grounding wire
- Measure neutral lines to detect short circuits
- •Measure the input and output of a DC-AC converter for solar power generation

#### An Assortment of Clamp-on Sensors Covers a Broad Range of Measurements

Model 9694 (5A) sensor has been added to the existing CLAMP ON SENSOR offerings: Models 9660 (100A), 9661 (500A), 9669 (1000A), and 9667 (5000A). You can also use a 9657-10 or 9675 CLAMP ON LEAK SENSOR to measure leakage currents in the milliampere range.

#### **Backup and Recovery from Power Failure**

The PW3198 uses the new large capacity BATTERY PACK Z1003, enabling continuous measurement for three hours even if a power failure occurs. In addition, a power failure processing function restarts measurement automatically even if the power is cut off completely during measurement.

### **Other Measurement Applications**

#### Flicker measurement

Measure flicker in conformance with IEC 61000-4-15 Ed2.

#### Phase voltage check for $\Delta$ connection

Use the  $\Delta$ -Y and Y- $\Delta$  conversion function to measure phase voltage using a virtual neutral point.

#### 400 Hz line measurement

Measure at a power line frequency of 50/60 Hz as well as 400 Hz.

# **Power Quality Survey Applications**

#### The power supply of the office equipment sometimes shuts down

Survey Objective
The power supply of a printer at the office shuts down even though it is not operated. Equipment other than the printer can also sometimes perform a reset unexpectedly.

Measurement Method
Setup is very easy. Just install the PW3198 on the site, and measure the voltage, current, and power. To troubleshoot, just select the clamp-on sensor and wiring, and then select the

Voltage Fluctuation Graph

#### nalysis Report

No failure occurred during the measurement period, but a periodic voltage drop was confirmed. The voltage drop may have been caused by the periodic start and operation of the electrical equipment connected to the power supply line. Equipment, such as a laser printer, copier, and electrical heater, may start themselves periodically due to residual heat. An instantaneous voltage drop is likely to have been caused by inrush current from equipment that consumes a large amount of power.

#### Medical equipment malfunctions

Survey Objective
Replacing the equipment with a new one by the service provider did not improve the malfunction. A survey of the power supply was required to clarify the cause.

Measurement Method Select the "U Events" course in the PW3198 in the same way as with the office equipment example.

Voltage and Current Waveforms at the Time Voltage Dip Occurs

#### nalysis Report

Alt was determined that a voltage dip (voltage drop) occurred and impacted the operation of the equipment. If a voltage dip occurs every day on a regular basis, the probable cause is the start of a large air-conditioning unit, pump, heater, or similar equipment.

### Surveying a Solar Power Generation System

# Survey Objective

- Maintain a solar power generation system and check its operation (verify the power quality)
- Troubleshoot (impact on the peripheral equipment, operation shutdown, etc.)

### easurement Method

Set up the PW3198 on the site and measure the voltage, current, and power. To survey the power quality, select the "Standard power quality measurement" course in the PRESETS menu. To

measure the DC voltage, connect channel 4 to the primary

#### Connection Example

Example of Voltage Waveforms at the Time of Line Switching

Analysis Report

All parameters can be recorded simultaneously with a single measurement.

- Identify changes in the output voltage of the power conditioner
- Presence or absence of the occurrence of a transient overvoltage
- Frequency fluctuation important for system interconnection
- Identify changes in the harmonic voltage and current included in the output
- · Power, integral power, etc.

**9667** 500A AC / 5000A AC (selectable),

φ254mm (10"), Cord length: Sensor to circuit: 2m (6.56ft) Circuit to connector: 1m (3.28ft), or AC ADAPTER 9445-02/03 (sold separately)

9290-10 9290-10 CT ratio 10:1, AC1000A, φ55mm(2.17"), 80(3.15")×20(0.79")mm busbar, Cord length : 3m(9.84ft)

#### **CLAMP ON LEAK SENSOR** (Leak Current)

**9657-10** 10A AC, φ40mm(1.57") Cord length: 3m(9.84ft)

**9675** 10A AC, φ30mm(1.18"), Cord length : 3m(9.84ft)

9660 100A AC, φ15mm(0.59")

Cord length: 3m(9.84ft)

WIRING ADAPTER PW9000 For 3P3W WIRING

WIRING ADAPTER PW9001 For 3P4W WIRING

MAGNETIC ADAPTER 9804-01 (red)

MAGNETIC ADAPTER 9804-02 (black) Magnetic tip for use with the standard Voltage Cord L1000 (generally compatible with M6 pan screws)

Red and black adapters sold separately. Purchase the quantity and color appropriate for your application. (Example: 3P3W - 3 adapters; 3P4W - 4 adapters)

**GRABBER CLIP** 9243

For use with the standard Voltage Cord L1000

#### PQA-HiVIEW PRO 9624-50

Use Model 9624-50 PQA-HiVIEW PRO (version 2.00 or later) with a PC to analyze the data collected by the PW3198.

Reduce voltage cords for easy wiring

CARRYING CASE C1001 Soft case

CARRYING CASE C1002 Hard case

### **Bundled accessories**

Voltage Cord L1000 8 cords, approx. 3 m each: 1 each red, yellow, blue, and gray plus 4 black; 8 alligator clips: 1 each red,

AC ADAPTER Z1002 Power supply for the PW3198 100V AC to 240V AC

SD MEMORY CARD 2GB Z4001

IMPORTANT

BATTERY PACK Z1003 (Ni-MH, 7.2 V/4500 mAh)
