

The First Underwater Classroom Camera

After hearing from a group of teachers that wanted a Video Flex[®] camera that could operate safely underwater, Ken-A-Vision[®] created the Aqua Flex. This camera works well in fresh or salt water classroom aquariums or in the field. The Aqua Flex is the perfect way to show your students a fish eye view of the world.

KNOWLEDGE THROUGH VISION

Visualize the Underwater World

With the Aqua Flex Camera you can show your classroom the underwater world. Inside the classroom, show your students a close-up view of fish scales or the algae growing on the side of the tank without harming either. Study fish habits and habitats.

With the optional battery pack and USB adapter you can bring your Aqua Flex with you on nature trails. Show your students what it really looks like under all that algae or where a frog lives. See what is really under the dock or in the reeds and cattails.
