

RoomView Connected™ Overview

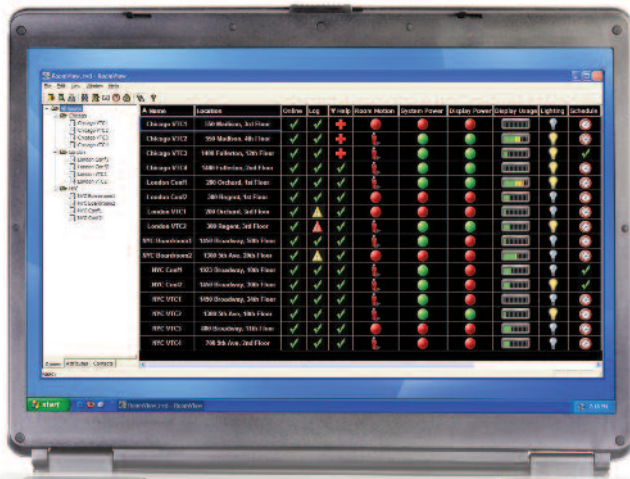

Crestron is the world leader of AV control systems, and award-winning RoomView software is the most mature, open program available. Crestron control capabilities are embedded inside the latest Ethernet connected DLP projectors, enabling direct control and communication from RoomView software without any additional hardware, programming or configuration.

RoomView Connected projectors provide simple, reliable web-based control of installed classroom projectors; remotely monitor, manage and control projectors from any computer or laptop on the LAN; instantly send tech support request from any classroom; monitor lamp life and projector status; schedule shutdown of all projectors; broadcast messaging for emergencies and daily announcements.

- > Connect stand alone projector to the managed network – at no additional cost and no additional hardware
- > Brand agnostic – works with a variety of popular brands of DLP projectors. You are not locked into any brand or model projector with RoomView
- > Simply connect DLP projector to the LAN via standard Ethernet connection; download FREE RoomView Express software from the Crestron website. Instantly monitor, manage and control any RoomView Connected DLP projector from any laptop or computer
- > Simple, intuitive projector control from the classroom computer or just by connecting a laptop to the network. Easily turn the projector on/off, select the video or computer to display and adjust volume
- > No system configuration or programming is required
- > Manage and control up to 250 projectors with RoomView Express Software. RoomView Server Edition of software will support unlimited rooms and projectors, across multiple campuses or around the world
- > Easily add Crestron room controllers to integrate other AV devices, lights, shades and thermostats. RoomView provides an infinitely scalable platform on which to build
- > Advanced automation features deliver enhanced energy and cost savings. Turn off all projectors at a pre-set time; add occupancy sensors to automatically turn off devices and lights when the room is vacant
- > Robust reporting provides important data for intelligent resource management and purchasing decisions
- > Remote AV Help Desk functionality increases operational efficiencies – faster tech support response times; fewer classroom interruptions and less down time; plan and schedule routine maintenance

- > RoomView detects when a projector is disconnected or goes off-line, and automatically sends an alert message

- > Broadcast messaging for increased emergency preparedness - Create and store instructions, safety protocols, and images which can be displayed from RoomView Connected DLP projectors in any or all rooms. Customized directions can be projected on a room by room basis, and emergency procedures can be reviewed and evaluated

Value proposition for teachers:

- > Ease of use – intuitive web based user interface
- > Instant remote help desk support
- > Simple, reliable emergency messaging

Value proposition for administrators:

- > Built-in and Free; no added line item in budget
- > Low cost of ownership – mature, reliable program. More effective and efficient use of staff and other resources
- > Reports lead to better planning and technology purchasing and resource management decisions
- > Emergency preparedness
- > Energy savings

Value proposition for IT managers

- > Remote and centralized management and control of technology resources
- > No system installation, configuration or programming
- > Change projectors without any setup
- > Standardized technology and support for every room
- > Automatic alert messages
