\*4. Subject to change depending on sales area. \*5. File format determined through Set-up Software.

## How Electronic Copyboards Work

Write directly on the board with common dry-erase markers.

Use the electronic copyboard just as you would use a whiteboard. Write directly on the surface, draw diagrams, take notes, brain storm. When the surface is full, you have the options of printing your work or storing it electronically, or simply continuing your writing to the next surface without losing your current work or your train of thought!

Just push a button to scroll the sheet while printing or saving your work.

A copyboard works like a large image scanner. With the push of a button the copyboard surface scrolls around to the back while being scanned for printing or saving. The M-115 has four writing surfaces and a projection screen surface. The M-111 and the M-5 have two writing surfaces.

Direct on-board printing is quick and convenient. Choose either Color or Black & White Prints.

Print your work directly from the board and share it with your audience, freeing them from taking notes and allowing them to concentrate on the meeting. Save time and eliminate errors when everyone possesses exact copies of what was written on the board. The M-115 and M-111 print in color or black and white, and support compatible InkJet and Laser printers (See compatibility) While the M-5 does not support an on-board printer, you may print from your computer once you have saved your digital files.

## Simple Operation

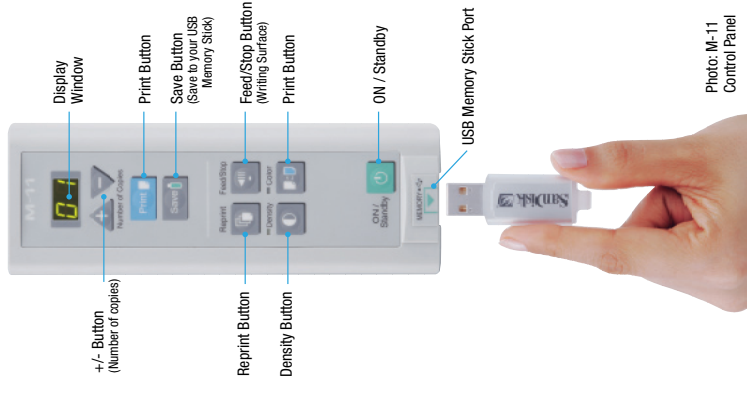

Photo: M-11 Control Panel

Save your work digitally. You can save to portable media or directly to your PC through a USB connection.

The writing on the board is saved as image data. Once saved to your computer it is easily viewed with common image viewing and editing applications. With digital image files you can attach your meeting notes to e-mail or insert them into office documents.

Using a portable media card you can save your data without hooking up to a computer. The M-115 and the M-111 use a USB Memory Stick. The M-5 uses a CompactFlash™ CF Card.
