How to import images from QOMO document cameras into Smart Notebook software
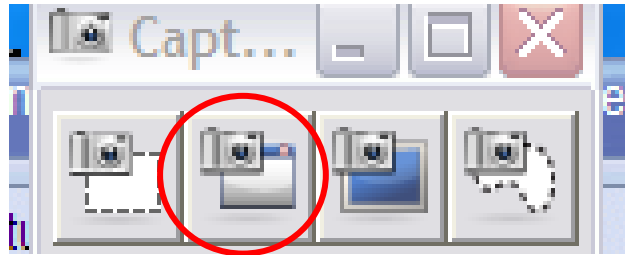

RESOLUTION

Smart Notebook software has the ability to capture screen image. QOMO's document cameras all come with VideoCap software allowing users to capture document camera image to PC. In order to import images from QOMO document cameras into Smart Notebook, one can use the VideoCap software as the source for the Smart Notebook's screen capture feature.

Procedures:

1) If QOMO video capture software software has not been installed, install QOMO video capture software (VideoCap) using the installation file on the product CD or from www.qomo.com

2) Connect QOMO document camera to PC with provided USB cable

3) Launch Smart Notebook

4) From Smart Notebook tool bar, select "Screen Capture" icon:

5) Notebook Screen Capture Tool bar pops up

6) Click the second button of the Screen Capture Toolbar to capture image from a window. Move the cursor into the QOMO VideoCap preview window and left click

7) The image on the VideoCap (image from the QOMO document camera) will be transferred to the current page of the Smart Notebook software

8) To import more images, the VideoCap software can remain open along with the Smart Notebook Screen Capture tool bar. It only takes two clicks to import the subsequent image from VideoCap to Smart Notebook.
