
The complete solution for three-phase 1000 Amp power analysis.

The PK314 complete system includes the following:

- PowerSight® Energy Analyzer [PS3000]
- Four 1 to 1000 Amp Current Probes [HA1000]
- Hard-Shell Carrying Case [CAS3]
- Deluxe Voltage Leads
- PowerSight Manager Software (PSM)
- Serial communications cable
- DC wall charger

Time-Tested Champion

PowerSight® can perform a 47-day unmanned load study that includes 53 summary parameters in each record (4540 records at 15-minute intervals yields 47 days). If you are more ambitious, and take the time to configure fewer log parameters, you can log up to 65,535 records! These capabilities will save you time and money by being able to log longer between updates and having more information available in the log for later analysis.

The HA1000 current probes offer superior linearity, phase shift, and frequency accuracy to insure your power readings and waveforms are accurate over a wide dynamic range and in the presence of high harmonic loads.

This complete system has all you need for complete source and load analysis of 3-phase (and single phase) circuits in any configuration with currents up to 1000 amps and voltage up to 600 volts. All complete systems come with our powerful and easy-to-use **PSM** (PowerSight Manager) software.

Availability

The PK314 is available for immediate purchase from Summit Technology Inc. To order, specify **PK314**. If only three HA1000 Current probes are needed, order the PK313.
