

# 550

## Digital Pocket Thermometer

### ***POCKET SIZED PRECISION***

■ New ergonomically designed head

■ Water resistant

■ Select a color for each application

■ Features include

- -58° to 571°F
- MIN/MAX
- Data Hold
- Auto power off

# 550 • Digital Thermometer

The 550 is housed in a protective sleeve that serves as a pocket clip and thermometer stand. Remove the stem from the sleeve to use. The stem can be slipped into the loop (built into the metal clip) to offer additional support or to insulate the operator from the measured substance. For best results when measuring liquids or permeable solids, insert at least half of the probe stem into the measured substance.

**Caution:** When measuring above 300°F, do not insert stem into substance beyond crimp.

## OPERATION:

- On/Off:** Powers instrument on or off.
- MIN/MAX:** Displays the minimum (1st press) or the maximum (2nd press) temperature recorded since the thermometer was turned on. The thermometer returns to real-time temperature readings in approximately three seconds.
- Hold:** Locks the present temperature on the screen while "HOLD" flashes in the corner. Press HOLD again to resume real-time measurement.

## GENERAL:

The thermometer automatically turns off after approximately one hour to extend battery life. Replace battery immediately when the low battery icon appears on the LCD. Maximum temperature range for plastic case is 14° to 122°F.

## Specifications

Temperature Range:	-58° to 571°F
Accuracy:	±1.8°F in the range -22°F to 302°F otherwise ±4°F
Resolution:	±0.1°F for -19.04 to 199.9 otherwise ±1°F from 200 to 300
Update Rate:	Approximately 1 second
Certification:	CE and NSF listed
Battery:	AB13, (SR44W)
Warranty:	Three year limited
