Remote Network Operation

When connected to a Local Area Network (LAN) by means of the RJ-45 connector,

the projector can be controlled remotely through a Web browser or by any of the clients (PCs connected to the LAN) on the LAN. The projector can also be accessed outside the LAN, provided a firewall is configured accordingly.

PC for Remote Projector

Using a Static IP Address

Set the IP Setting to **Static IP Address** if you want the projector to have a **permanent** IP address.

The following screens may vary depending on the operating system you are using.

From the **Local**

Area Connection

Properties

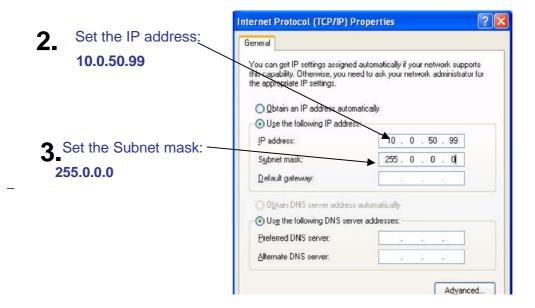

window, open the

Internet Protocol

(TCP/IP)

Properties

window.

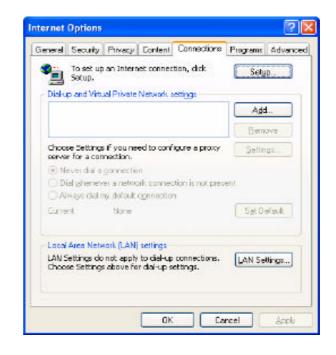

4. Click OK.

To prevent
messages being
filtered
between the
remote

PC and the projector, disable the proxy server in your Web browser.

From the Internet Options window, click LAN Settings...

In the Local Area
Network (LAN)
Settings window,
make sure the
Proxy server
check box is not
checked. Click OK.

2. Enter the address

of the projector in the address bar of your browser (internet explore or Firefox) and click go http://10.0.50.10

The **Remote** page opens.

The Remote Interface Overview

The following shows the remote interface main screens.

Remote

This screen shows the current status of the projector.

Remote-2

This screen is used to control the projector.

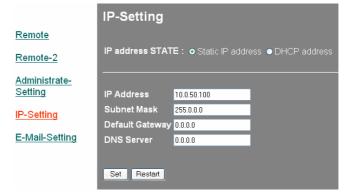

Administrator Settings

This screen allows the administrator to set a password and limit connections to the projector.

IP Settings

This screen allows the IP address to be set for static or DHCP.

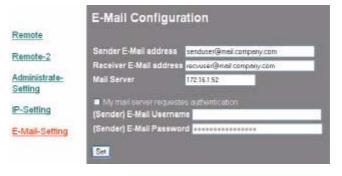

E-mail Settings

Status messages for the Projector can be emailed to the administrator or any other address.

Some servers require a sender address, otherwise the email is blocked. So in most cases the **Sender** and **Receiver** addresses will be the same.

The projector automatically emails status messages, such as IP address, and Power state as shown below to the **Receiver** address. The projector cannot receive e-mails.

Setting up Remote Operation

You should know some or all of the following address settings:

- IP Address
- Subnet Mask
- Default Gateway
- DNS Server
- E-mail addresss for remote PC
- Password (if required) for remote PC
- Outgoing server (SMTP) for remote PC

Important:

Using a proxy server for your LAN may filter messages from the projector. Disable the proxy server to prevent this.

The factory default IP address for the projector is **DHCP on**. If this address has been changed, you can find the current IP address in the OSD Status of the projector.

Using the DHCP Address Settings

Set the IP Setting to DHCP if you are using a DHCP server that will assign an IP address to the projector.

Enter the address of the projector in the address bar of gemote-2 your browser:

http://10.0.50.10

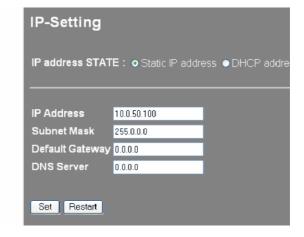

Enter the address of Remote

Administrate-Setting

IP-Setting

The **Remote**page opens.

E-Mail-Setting

- 2. Click IP Settings.
- Check the DHCP
 Address
 button and click
 Set.

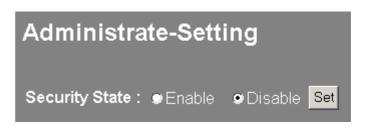

Enabling and Disabling Passwords
