

Protect Me from Dust

Filter-Free is NOT Free!

If the projectors in your classroom could talk...
they'd tell you the whole dusty truth.

Filter-free does not mean maintenance free. Here are the important facts:

- Dust still gets on the lamp and other critical components inside filter-free projectors.
- Dust reduces lamp brightness and useful lamp life in filter-free projectors.
- Dust degrades image quality in filter-free projectors.

Projectors built with 3LCD technology use filters to protect the lamp and engine from dust build-up. The result is road-tested reliable projectors with lower total cost of ownership.

Choose 3LCD technology and
protect your projector investment.
