Copyboards and projectors from PLUS link minute taking, reporting, and sharing through a CompactFlash card interface

PLUS's M Series copyboards featuring a built-in memory card slot have acquired a favorable reputation since their release. Benefits of the memory card function can be further expanded by the U4-136 digital projector with an internal CF card slot. Now you can download your hand-written meeting notes from the M Series to a CF card, and project them as-is from the U4-136.

Store minutes and sketches digitally!

M Series copyboard (The image above is the M-10S.)

No PC necessary.
Store information as-is on CF card.

The M Series from PLUS is the only copyboard with a built-in CFA-compliant memory card slot, and lets you save the information written in four colors onto a CF card in PNG format. Board operations are easy---just press MEMORY button on the board panel to store the data. It is no longer necessary to bring a PC into a meeting and to connect it to the board.

Share with more people via projector!

The digitally saved data can be reproduced as-is from the U4-136 later in other meetings, multiplying the opportunities to share the information. Moreover, the audience can see the data on a large screen, in color, and in details including your scribbled notes---advantages that prepared minutes cannot offer.

The U4-136 is compatible with a CompactFlash Type I card. Please see our website for details

Combine M Series and U4-136 for maximum efficiency.
