## Product Notice

### Products affected:

PACE 1003

### Background:

Mechanical changes have been made that has added an additional port to the back panel of the PACE 1003

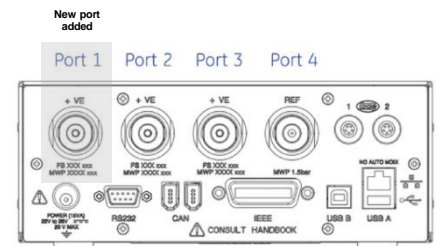

### Clarification:

Whilst the total limit of the number of sensors that can be accommodated in a PACE 1003 remains at 3, this change now makes it possible to offer 3 gauge sensors as an option, due to having the additional port that can be used as a reference for the gauge sensors.

The PACE 1000 specsheet is currently being updated to reflect this change.

For further details please refer to the latest Sales Order Specification document (S0087 rev D) for details on available combinations for the PACE 1000 range

### Actions:

Please communicate this Product Notice with your customers, channel partners for clarification.

Our Application Engineers are available to support and answer any questions.

Please let me know if I can clarify this further.

Best Regards,

### Chris Roberts
