Smoke Gage Kit

Complete Kit, Includes 10 Components

Easy-to-Use Smoke Gage Kit enables you to quickly balance maximum CO₂ with minimum smoke for clean, efficient combustion. Simply take an actual sample of the smoke being tested and compare it to the standards on the smoke chart included. Just 10 full strokes of the pump produces an accurate test sample. Complete testing instructions are included.

Model 920, Smoke Gage Kit

Popular with professional heating engineers, the Model 920 Smoke Gage Kit includes these quality components:

- (1) Dwyer® Smoke Gage Pump
Fast working; the first known unit to conform with ASTM D-2156-XX standards for testing smoke density in flue gases from burning distillate fuels. Filter paper clamps instantly into pump inlet.
- (2) Hole Plugs
Packet of 20 to fill awl holes.
- (3) Smoke Chart
For easy comparison with samples taken. Laminated plastic, wipes clean.
- (4) Awl
Pierces smoke pipe for thermometer and sampling tubes. Large, comfortable plastic handle.
- (5) Smoke Gage Filter Paper
An exclusive, time-saving Dwyer development. Roll of filter paper is contained in dispenser box, kept clean and convenient.
- (6) Metal Terminal Tube
8-1/2" long, heavy gauge brass.
- (7) How-to-Use Instructions
Simple with step-by-step illustrations.
- (8) Rubber Tubing
Flexible, long-lived.
- (9) Spring Holders
A superior design for holding thermometer and sampling tubes.
- (10) Kit Case
Tough, durable, one piece high density polyethylene with living hinge and clasp. Foam liner protects contents.
