LONER®

High Performance Soldering Station

### Product Features

- Our newest advanced station with precise temperature control that delivers rapid heat-up and recovery times
- Innovative direct tip-to-heater design provides quicker recovery and better sensing as well as more accurate and stable temperatures at the tip
- New and modern illuminated design for better visibility and to better indicate power on/off
- Innovative handle design makes tip change quicker and easier
- Illuminated temperature graduation markings
- Easy to maintain and calibrate with external calibration access
- Modular sponge tray
- Accepts a wide variety of tips
- RoHS compliant & ESD safe
- 18 month warranty

## Package Contents

- 971e** Temperature Controlled Soldering Station includes XP375 Tip
- PD528** Tool Pod
- SH235** Modular Sponge Tray with RS200 Round Cleaning Sponge
- WP556** WIGAPRY® Mini Screwdriver and Calibration Aid Tool

**Warning:** Do not hit or tap the soldering tool. The ceramic heater element may break

## Tip Care

1. Set desired temperature. Blinking Temperature Regulation Indicator means Tool is ready.
2. TIN the Tip. (apply solder)
3. Do not rub, bend or reshape the Tip.
4. Always clean the Tip by wiping it against the moist **RS200\*** Sponge or **EA439** Dry Tip Cleaner and RE-TIN as needed with the **LT-1** Tip Tinner and Cleaner.

## Temperature Calibration

1. Turn on power and set Temperature Control Knob to 400°F (205°C).
2. Using a clean and well tinned Tip, apply a small amount of solder on the Tip, just enough to form a bead on top of the Tip.
3. Place the center of the thermocouple wire of the **SDS100** on top of the bead.
4. Again, apply a small amount of solder on the center of the thermo-couple wire, just enough to embed the center.
5. Adjust LO-Temp Calibration Pot so the Meter will read 400°F (205°C).
6. Set Temperature Control Knob to 800°F (427°C).
7. Adjust Hi-Temp Calibration Pot so the Meter will read 800°F (427°C).

## MS412

Digital Temperature Measurement System

For a quicker calibration for more than one station try using the **TP475** Temperature Probe

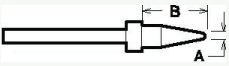

\* To avoid transferring debris back to your clean tip make sure you replaces the **RS200** sponge frequently.

# Changing Tip

- IMPORTANT:** Make sure your tool is cool.
- Do not twist or wiggle Tip
- Loosen RCS71 Collar by turning it counter-clockwise.
- Remove old Soldering Tip.
- Insert new Tip.
- Tighten RCS71 Collar. (should be “finger” tight only)

**WARNING:** Do not use the soldering tool if soldering tip is loose. This will cause the heater element to break.

### Tool Pod Maintenance

#### Replace SC581 Solder Collector

1. Hold Thermal Housing (1A) firm and turn Front Housing (1C) counter-clockwise and pull it apart.
2. Remove used Solder Debris Collector (1B) and replace with a new one.
3. Reassemble (1A) to (1C) (for correct fit line up tabs to slots)

\*14 (Ring) and 15 (Bushing Lens) must be installed on 30 (Tool Cord) before 29 (Cable Tie) is installed to make loop.

\*18 (Panel Pot) is included when you order 17 (Circuit Board Assembly)
