**DESIGN STORY**

Sena™ & Sena™ EX  
Monitor Arms

At Fellowes, we believe that the personal pursuit of meaningful work requires a workspace that balances engineering excellence, responsive design, and engaging aesthetics.

Monitor arms are one of the most direct and consequential interfaces of workplace comfort. We saw an opportunity to reimagine monitor arms from the ground up, with dynamic elegance built into every component.

The result of that process is Sena™: a sophisticated range of monitor arms, expertly crafted to perform effortlessly.

**Dynamic elegance is not typically a phrase used to describe monitor arms, but we thought it should be.**

Fellowes Industrial Design Team

## Ergonomic Fidelity

Sena™ was designed to provide a versatile and ergonomic workspace, easily configurable to accommodate users regardless of height, desk configuration, or monitor placement preferences. The key to achieving this started by giving the arm up to 12.6 inches of dynamic height adjustability, so screens could be easily adjusted to the perfect position whether sitting or standing. Versatility is maintained across axes, where users can adjust the height, depth, and diagonal position with fingertip sensitivity.

And because workspace needs are as varied as the people that use them, Sena™ features 39 different configurations across different mount, color, and gas spring vs. fixed arm options.

## Precise Positioning

When it comes to maximizing user comfort and multi-screen functionality, Fellowes understands even micro-adjustments can create a noticeable impact. The proprietary Sena™ Slider allows screens to be positioned side by side, gapless, and level—creating a seamless and ergonomically superior viewing experience.

## Surprising Utility

Modern work involves greater movement and cross-device connectivity than ever before, so developing a faster, easier charging system was a priority. Our solution to this challenge is Flexcharge: a desktop charging hub designed specifically for Sena™. Flexcharge integrates with the base of Sena™, providing immediate access to 2 USB Fast Charge ports and Qi wireless charging. Now, it's easier than ever to stay connected while on the move.

## Expressive Form

As with all Fellowes innovations, the finished product must invite engagement, exude sophistication, and reflect the same thoughtfulness that drives the engineering process. Beautiful and functional—from the inside out.

The unmistakable structural character is marked by angled surfaces and an ascending stance, reinvigorating perceptions of how a monitor arm can enliven a workspace. The signature "Splice" design transforms construction components into an iconic, defining visual theme.

## Purposeful Presence

Sena™ not only reimagines how a monitor arm can facilitate productive work, but enriches it through human-centered design. Modern in appearance, robust in performance, Sena™ makes any desk a productive space for comfortable, meaningful work.
