#### General

The FLIR GF77 is a groundbreaking uncooled optical gas imaging camera with interchangeable lens options that allow you to detect methane, sulfur hexafluoride (SF6), ethylene, and other gas emissions. Capable of gas visualization and radiometric temperature measurement, the FLIR GF77 is an ideal inspection tool for electric power utilities, oil and natural gas operations, chemical/manufacturing facilities, the food, and agriculture industry, and first responders. The FLIR GF77 is compatible with two lens types: the FLIR GF77-LR lens is spectrally filtered for methane and other industry gases, while the FLIR GF77-HR lens is filtered for SF6, ammonia, and more.

Based on the award-winning design of the FLIR T-series platform, the FLIR GF77 offers a vibrant, 4-inch touchscreen LCD, 180 degree rotating optical block, and eyepiece for convenience in direct sunlight. This affordable solution offers the benefit of built in thermographic calibrations and the flexibility to visualize multiple gases by simply changing lenses.
