

Splicer V-Groove Cleaning Kit & Carrying Case

FiberFox has combined its recommended fusion splicer v-groove cleaning products into a single kit for effortless ordering and convenience. The kit combines items required to identify and remove easily the contaminants that can degrade overall splicing performance.

Environmental contamination, such as dust, dirt, and fiber coating debris, as well as, the silica deposits generated during the fusion process eventually find their way to the surface of the v-groove. This contamination will offset the fibers and degrade performance. To solve cleaning needs, FiberFox offers the **Splicer V-Groove Cleaning Kit & Carrying Case**. This kit includes the highest quality tools into an affordable and effective inspection and cleaning solution for any fusion splicer. Small and lightweight, it can be carried separately in its own carrying case

FiberFox's commitment to excellence includes items as small, but crucial, as the cleaning formulas and tools we offer to our customers. Only the best performing cleaning formulas tested are offered as FiberFox consumable products. That's the reason many technicians and installers trust that our various consumables including fiber optic cleaning supplies and tools are the very best in the industry.
