

## Rapport Glass Wall - Basic Series

Model No: GWA XXX-XXXX

### OVERVIEW

The new Rapport Basic Series Glass Wall panel system is engineered to incorporate the best qualities of magnetic glass markerboards with a modular full wall whiteboard ensemble.

### GLASS PANELS

The marker board system comes in a range of standard sizes from 4' x 12' up to 8' x 24' in combinations of 4, 6, and 8 foot long panels. Panels are made of 0.15" thick, tempered glass and are available in gloss white, gloss black, low-iron white, red, orange, yellow, green, blue, purple and navy colors. These glass panels are backed with 20 Ga steel to allow for the attachment of rare earth magnets.

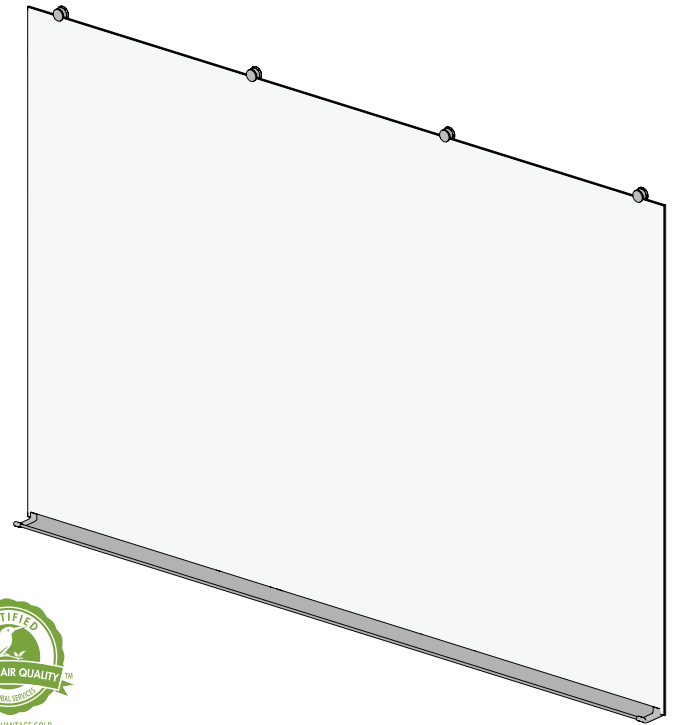

### MOUNTS

Silver finish wall mounts come standard with gloss white, gloss black, and hierarchy colored boards. The mounts are made up of a 1" diameter machined stainless steel cap attached with an M6 x 9mm stem to a 1" diameter cast zinc board support. This assembly is attached to a stamped sheetmetal back plate with two M4 x 6mm countersunk screws. A foam adhesive covers one screw at panel interface. Each mount is attached to the wall with a M5 x 34mm phillips pan head screw and comes with masonry and drywall anchors. A set of four mounts come with boards 47.24" x 47.24" and smaller, a set of 6 mounts for 47.24" x 70.87" boards, and a set of eight mounts for 47.24" x 94.49" boards.

Low-iron white boards come standard with two concealed Z bars that engage with two punched clips on the back of the markerboards. Z bars are 16 Ga aluminum bars of varying length attached to the wall with M5 x 34mm pan head screws. Masonry and drywall anchors are included.

### BLADE TRAY

The anodized aluminum tray extends nearly the full length of the wall, leaving a panel overhang of 0.5" on either end for 12 ft trays and under and 1.0" overhang for longer walls. The tray extends 2.83" from the wall with 2.0" of usable tray surface and a 0.5" deep slot for holding panels. Tray is mounted directly to wall with #10 x 1 1/4" phillips truss head screws. Screws are driven through back of tray into studs or into anchors provided. Trays come as single piece extrusion up to 12 ft or in two pieces for longer walls that are spliced together using a single 1/8" steel roll pin, two 14 gauge stainless steel joiner plates and four M6 x 5mm set screws. Joiner plates are inserted through bottom and back channels built into tray extrusion. M6 x 10mm allen drive, nylon tip adjuster screws are threaded into joiner plates and through tray bottom to allow height adjustments to be made for individual panels along wall.

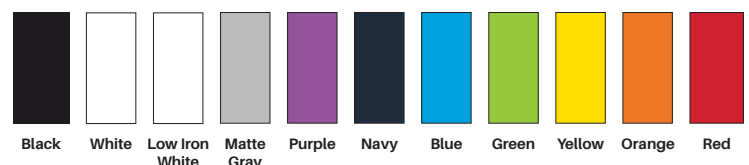

### OPTIONS / ACCESSORIES

Mounting standoffs with a brass finish are available for purchase separately. See Liso and Fluent Glass Walls for other glass panel styling options.

### COMPLIANCE

Glass is Indoor Advantage Gold certified.
