

Indexing Pry Bars and Standard Pry Bars

SPEED

Push button indexing head allows you to easily change the head position, maximizing the leverage point to get the job done.

STRENGTH

All pry bars are designed to meet or exceed ASME specifications.

ACCESS

Head indexible through 180°, with 14 locking positions for unmatched access.

GearWrench® Pry Bars are ideal for engine repositioning and placement, aligning steel components, and repositioning equipment. There are two ranges of pry bars to meet the different requirements of users. The premium pry bars with indexing heads offer the most versatility and adjustable access. They are available in sizes from 8" to 33" with regular handles and as a 29" and 48" version with an extending handle. The Acetate handle pry bars have a fixed angled tip for access and leverage and a special formulation handle that gives greater resistance to cold temperatures and to drops. They are available in sizes from 8" to 36".

Access

- Head indexes through 180° for optimized leverage point
- 14 locking positions for unmatched access

Strength

- Exceeds ASME specifications

Speed

- Push button indexing head for quick head angle adjustment

Additional Features:

- Grooved profile adds traction on 24" and 33" and extendable pry bars
- 29" and 48" with push button to adjust reach
- Collapses to easily store in a tool box
- Push button adjustment

Angled Tip Pry Bars

Access

- Angled tip for increased leverage and access

Strength

- Meets ASME performance specifications

Additional Features:

- Black phosphate coated shaft to reduce corrosion
- Comfortable ergonomic handle for greater leverage
- Acetate handle with special formulation for greater resistance to cold temperatures and drops
