Kanomax Group

Since our inception 60 years ago, Kanomax has been the most promising manufacturer of a broad range of precision measuring instruments for fluid mechanics research, environmental, aerosol research, particle measurement, and customized system applications. As a company that prides itself in technology, product quality, and service, we have been enjoying an unsurpassed reputation in the industrial and academic fields.

Global Network

Our direct subsidiaries and Kanomax’s affiliates and well-trained distributors worldwide are there to provide the most efficient support and service for you. Our global network is always listening to the voice of customers, like you, in order to keep providing the best measurement solutions possible.

- Kanomax Holdings Inc. (New York, NY)
- Kanomax Corporation (Osaka, Japan)
- Kanomax Instrument Shenyang Inc. (China)
- Shenyang Kano Scientific Instrument Co., Ltd (China)
- Kanomax USA Inc. (Andover, NJ)
- Kanomax Japan Inc. (Osaka-Tokyo-Nagoya, Japan)
- MSI. TOKYO (Tokyo, Japan)

ISO Certification

Kanomax is an ISO 9001/ISO14001 certified company. Kanomax management and production procedures adhere to these international quality standards.

Calibration facility ensures accuracy and repeatability

Kanomax fully understands service is an essential part of the total solution provided to our valued customers. Having already established a worldwide service network, we continuously strive to improve our support services.

For reliable measurements it is recommended that all instruments be calibrated on an annual basis. This ensures ongoing credibility and accuracy. Our calibration laboratory in New Jersey maintains the most accurate wind tunnel of its kind. Kanomax provides the highest quality of service available with a quick turnaround time. Our service specialists are well trained and will calibrate your instruments to the highest standards.

Our lab certifies Kanomax product to NIST standards.

Anemomaster™ Lite

Palm-size and feather-weight standard hot-wire Anemometer

- Compact and lightweight
- Easy replacement of probe without recalibration
- Data Hold function
- Includes probe with 59 in (150 cm) cable, extension rod, 4 pcs. AA batteries, carrying case, and NIST Certificate

Anemomaster™ Professional & Standard

Telescopic, articulating probe is designed for HVAC testing and balancing applications

- Simultaneous display of temperature and airflow or air velocity
- Telescopic, articulating probe
- Data HOLD function, record and recall MAX/MIN/AVG
- Store up to 1,500 measurements
- Data processing software allows real-time measuring and downloading data to PC
- Complete with telescopic probe with 79 in (200 cm) cable, Data processing software, USB cable, AC adapter, 6 pcs. AA batteries, carrying case, and NIST Certificate

Climomaster™ Series

Multi-function hot-wire Anemometer with detachable compatible probes

- Simultaneously measures and displays air velocity, flow rate, humidity, temperature, and differential pressure
- 6 interchangeable probes are available for various applications
- Smart probe technology: easy probe replacement without recalibration of the main unit
- Data HOLD function, record and recall MAX/MIN/AVG
- Store up to 20,000 measurements
- Data processing software allows real-time measuring and downloading of data to PC
- Includes probe, 79 in (200 cm) probe cable, 6 pcs. AA batteries, carrying case, and NIST Certificate

Anemomaster™ Model 6810 Series

Rotating Vane Anemometer with High Accuracy from 40 to 7800 fpm

- 2 sizes of vane heads are available for users' applications
- Industrial grade enclosure and metal vane probe
- Data HOLD, record and recall MAX/MIN
- Complete with metal vane sensor (choice of 2.75" or 1.00" diameter) with 5 ft long cable, extension rod with handle grip, flexible extension rod, 3 pcs. AA batteries, carrying case, and NIST Certificate

Climomaster™ Model 6501 Series

Multi-function hot-wire anemometer with detachable compatible probes

Features:

- Simultaneously measures and displays air velocity, flow rate, humidity, temperature, and differential pressure
- Airflow rate calculation based on registered duct size
- Now equipped with an automatic atmospheric pressure compensation function for precise airflow measurement
- Store up to 20,000 measurements
- 8 interchangeable probes are available for various applications
- Smart probe technology: easy probe replacement without recalibration of the main unit
- Includes probe, 79 in (200cm) probe connection cable, 6 pcs. AA batteries, carrying case, and NIST Certificate

Optional data processing software allows real-time measuring and downloading data to your PC

Anemomaster™ Professional & Standard

Multi-function hot-wire Anemometer with telescopic, articulating probe

Features:

- Simultaneous display of temperature and airflow or air velocity
- Telescopic probe measures air velocity and temperature in air ducts, vents, and small openings
- Data HOLD function, Record and recall MAX/MIN/AVG
- Store up to 1,500 measurements (Professional only)
- Data processing software allows real-time measuring and downloading data to your PC (professional only)
- Includes telescopic probe with 79 in (200 cm) cable, Data processing software (Professional only), USB cable (Professional only), AC adapter, 6 pcs. AA batteries, carrying case and NIST Certificate

Telescopic probe is designed for HVAC testing and balancing applications

Applications:

- HVAC Testing
- Facility Maintenance
- Critical Environment Certification
- IAQ Investigation

Theory of thermal (hot-wire) type Anemomaster™

The air velocity sensor is heated and temperature elevated (relative to the surrounding air) by means of control electronics. The temperature compensation sensor senses the ambient, or surrounding air temperature, and forces the velocity sensor to stay at a constant overheat above the ambient. The circuit forces the voltage to be equal by means of an operational amplifier. Air flowing past the sensor tends to cool the sensor, thus driving down its resistance. The amplifier responds by immediately delivering more power to the circuit to maintain voltage equilibrium. Delivered power is converted into electrical signals to display.

Anemomaster™ LITE

Palm-size and feather-weight standard hot-wire Anemometer

Features:

- Compact and lightweight
- Display switchable in m/s or ft/min (FPM) for air velocity and °F and °C for air temperature
- Easy replacement of probe without recalibration
- Average measurements over 1 or 5 seconds for air velocity
- Data Hold function
- 4 pcs. AA batteries, extension rod, carrying case and NIST Certificate

Anemomaster™ Vane Model 6810 Series

Rotating Vane Digital Anemometer

Features:

- High Accuracy from 40 to 7800 feet per minute
- 2 sizes of vane heads are available for users' applications
- Industrial grade enclosure and metal vane probe
- Large display with backlight
- Data HOLD, Record and recall MAX/MIN
- Includes metal vane sensor (choice of 2.75" or 1.00" diameter) with 5 ft long cable, extension rod with handle grip, flexible extension rod, 3 pcs. AA batteries, carrying case, and NIST-traceable calibration certificate

Vane Air Velocity Transmitters

Features:

- Transmitters specially designed for monitoring the Indoor Air Quality in the air conditioning, heating, and ventilation industries.
- Three versions available:
AT400: Air Velocity Transmitter
TAT420: Air Velocity & Temperature Transmitter
THT500: Temperature-Humidity Transmitter
- Three separate power supplies 110 VAC 50/60 Hz, 220 VAC 50/60 Hz, and 10-30 VDC
- Three concurrent outputs for each measurement: 0-1 VDC, 0-5 VDC, and 4-20 mA DC
- Temperature Range -4 to 212°F (-20 to 100°C)

TABmaster™ Capture Hood

A solution for airflow testing and balancing

The new Kanomax TABmaster™ is the perfect tool for accurate supply and return airflow measurements. Interchangeable hoods make it easy to sample the air for any duct size. The unit is lightweight and easy to handle. The full color screen can be tilted so it's always at the optimal viewing angle regardless of height.

Features:

- 23 to 2500 cfm (40 to 4250 m3/h) range
- Simultaneously measures and displays air flow, temperature and humidity
- Displays the direction of the airflow
- Store up to 8,000 measurements
- Advanced storage feature allows you to store multiple measurements under a single ID#
- Built-in back pressure compensation ensures accuracy for large volumetric flow measurements
- Removable handheld micromanometer with Bluetooth® wireless capability (Model 6715)
- Includes: standard hood, carrying case, AA batteries, PC communication cable, data processing software, user manual, and calibration certificate

Applications:

- HVAC testing, adjusting and balancing
- Air volumetric flow measurements through registers, diffusers and grilles
- Direct readout at supply and return airflow
- Air velocity measurement in the duct
- Check filter fouling by measuring differential pressure

Portable stand extends up to 6.5' from top to base

The Bluetooth® feature can send data to any Android-based device

Micromanometer

Smart micrometer for TAB professionals

Handheld micromanometer with Bluetooth® wireless capability takes airflow and pressure readings with a pitot tube or the optional velocity matrix. The matrix is a cross shaped grid, similar to the one in the base of the capture hood, that makes it possible to take face velocity readings and average velocity readings at multiple points simultaneously. The Bluetooth® feature can send data to your smartphone or any Android-based device.

Specifications	
Model	6700
Air Velocity Ranges	0.15 to 40 m/s (with Pitot tube) 0.15 to 15 m/s (with Velocity Matrix)
Accuracy	±3% of readings ±0.05m/s
Pressure Ranges	-2500 to 2500 Pa
Accuracy	±0.25% of readings ±1Pa
Temperature Ranges	0 to 50°C
Accuracy	+/- 1% of reading +1°C
Relative Humidity Ranges	0 to 100%RH
Accuracy	±3%RH (10~90%RH)
Interface	USB, Bluetooth®
Datalogging	8000 measurements
Power Supply	4 x AA Batteries or AC Adapter

Pitot tubes and Velocity Matrix are available from Kanomax

Pitot Tube

Stainless Steel Construction Pitot Tubes

The unique ellipsoidal nose form results in exceptional accuracy, insensitivity to errors in alignment and elimination of the need for calibration curves. Constructed from stainless steel, tubes can be as small as 2.3 mm in diameter yet scaled up to 4 m in length.

Features:

- Totally compatible with manometers, pressure gauges and pressure transmitters
- Ideal for measurement of air velocity in hostile environments
- Integral thermocouple for combined pressure and temperature sensing
- Can be used in permanent position when fitted with gland
- S-Type for limited access and adverse conditions

Flow Grids

For Accurate In-Duct Volume Flow Measurements

Kanomax flow grids produce averaged total and sub-static pressures signals to generate an enhanced velocity pressure signal, outside the duct wall, that directly relates to the volume flow, providing accurate and reliable outputs where other flow measuring devices are found to be unsatisfactory. Works directly with Micro-manometers, pressure transducers, Magnahelic gauges, and pressure activated alarm switches. These are ideal for ventilation monitoring for LEEDS and many other facility management monitoring applications.

Features:

- Sizes from 4.0" (100mm) diameter to 10 ft.(3.0 meters) square
- Uncertainty of flow measurement is within +/- 1.0%
- High temperature systems up to 850°C are available
- Stainless steel grade 321 tube supplied as standard, other grades of steel or alloys are available upon request

Standard Sizes

Rectangular Grids		
Type A 6.4mm (1/4") diameter tube	Manifold length (mm)	100 to 450
	Pressure Tube length (mm)	150 to 450
Type B 12.7mm (1/2") diameter tube	Manifold length (mm)	250 to 650
	Pressure Tube length (mm)	350 to 1200
Type C 25.4mm (1") diameter tube	Manifold length (mm)	750 to 1000
	Pressure Tube length (mm)	800 to 2000

Radial Grids		
Type A 6.4mm (1/4") diameter tube	Diameter (mm)	100 to 500
Type B 12.7mm (1/2") diameter tube	Diameter (mm)	500 to 1100
Type C 25.4mm (1") diameter tube	Diameter (mm)	1100 to 2500

X Flow Grids

For Accurate In-Duct Volume Flow Measurements

X flowgrids will give useful and reliable readings in a wide variety of in-duct locations often where other flow rate measuring devices are found to be unsatisfactory or difficult to install. The low cost design consists of two tubes mounted diagonally through the cross section of the duct. They generate an averaged signal for both the total and sub-static (X) or static (UX) pressure along the length of each tube to generate a differential pressure signal that directly relates to volume flow.

Features:

- Economical method of measuring volume flow within a duct
- Uncertainty of volume or mass flow measurement within +/- 5.0%
- Stainless steel grade 321 tube supplied as standard
- High temperature systems up to 850°C (continuous) available
- Differential pressure correlation/correction factor:

UX version: 1.0 correlation ;
X version: 2.0 amplified correlation

Anemomaster™ Model 6162

High Temperature Anemometer

Features:

- Air velocity and temperature measurements in 932°F (500°C) environments
- Record and recall MAX/MIN/AVG, Timing graph display
- Store up to 999 measurements
- RS232C interface, analog output, and remote control terminal equipped
- Includes shoulder strap, AC adapter, 2 pcs. analog output cable, and 6 pcs. C cell batteries

High temperature measuring solution requires Model 6162 with one of the high temperature probes (0203, 0204 or 0205)

- The Model 0203 includes probe with 4.9 ft (1.5 m) cable, 5m probe connection cable, probe case, and NIST Certificate
- The Model 0204 includes probe with 7.6 ft (2.3 m) cable, 10m probe connection cable, probe case, and NIST Certificate
- The Model 0205 includes probe with 7.6 ft (2.3 m) cable, 10m probe connection cable, probe case, and NIST Certificate

- Easy probe replacement without recalibration of the main unit
- Selectable output options: 0 to 5 V or 4 to 20 mA

4-Channel Anemomaster™ Model 1570

Compact design 4-channel unit with compatible probes

- 10 interchangeable probes are available for various multi-channel applications
- Simultaneously measurements of 4 channels of air velocity
- Software allows real-time measurements of air velocity and airflow in 4 channels
- The Model 1570 includes data processing software, RS232C cable, power cable, and 2 pcs. fuse

Multi-Channel Anemomaster™ Model 1550 / 1560

Up to 320 points multi-measurements system with a variety of probes

- System can be scaled up with modules and probes
- 3 types of probes are available
- 4 types of modules are available
- The chassis may be cascaded up to 5 units via RS232C

Indoor Comfort

Comfort is very subjective and will vary from one individual to the next, but ASHRAE Standard 55 provides guidelines for a "comfort zone" that most people will feel comfortable in. This comfort zone is derived from both temperature and humidity and varies depending on the season. See the chart to the right for details. The 2211 IAQ Monitor from Kanomax can measure both parameters simultaneously indicating if changes are needed to make a building's occupants comfortable.

The monitor can also check CO2 levels and determine the rate of exchange, or the percentage of outside air, being introduced to a building per ASHRAE Standard 62. Controlling the rate of exchange with the HVAC system is critical to ensuring occupant well-being. Too much CO2 build-up can cause lethargy and make it difficult for individuals to concentrate. Too much outside air may also be harmful if it's introducing external pollutants to the environment.

The 2211 is a great tool for IAQ investigation and spot checks to ensure an indoor environment remains within desired levels to maintain occupant health and comfort. The ability to measure all of these parameters in a single instrument simplifies the labor involved and eliminates the need to purchase and learn multiple instruments.

Gasmaster Handheld Gas Monitors

CO, CO₂, Ammonia, Ozone, VOC etc. More than 20 gases

Features:

- Simultaneous measurements of gas concentration, temperature, and humidity
- Model 2710 is simple, easy-to-use, low-cost monitor
- Model 2750 has data logging function and USB interface for PC communication
- The gas monitor is fully compatible with all gas sensors

Handheld Odor Monitor

Highly Sensitive, 3 Models for Various Applications

Handheld Odor Meter is the most popular simplified tool for odor analysis, which indicates the relative strength and odor classification numerically by comparing the odor gas and purified air.

Features:

- Numerical value for relative strength of smell
- Numerical value for classification of smell
- Handheld Odor meter is ideal for Before and After applications, such as air purification and cleaning service.
- Real-time sampling mode displays odor change continuously
- Memory sampling mode saves data based on the selected sampling rate. (up to 32732 data, 511 files)
- Battery operated with 7 hrs continuous usage

Applications:

OMX-SRM

- Finding odor source at factories, incinerator, plants, or effluent treatment facility

OMX-ADM

- Evaluation for deodorizing at hospitals or nursing homes
- Suitable for putrid odor such as ammonia

OMX-TDM

- TVOC measurement for monitoring IAQ condition

Dif-Kit Tracer Gas Hardware

Professional Fume Hood Diagnostic Tools

The ANSI/ASHRAE 110 test is a method of testing the performance of laboratory fume hoods. The Kanomax Dif-Kit is ideal for use in performing the Tracer Gas test in accordance with the ANSI/ASHRAE Standard 110-1995. Kanomax also offers alternative tracer gas systems due to concerns to prevent greenhouse gas emissions.

Features:

- Diffuser is made to the design and specifications of Standard drawing #110-83M
- The internal critical orifice ensures a flow rate of 4 liters per minute. Other orifice sizes can be inserted
- Alternative tracer gas systems are available - SF₆, NO₂, or FM-200 (HFC-227)
- Thermal anemometer for face velocity testing
- Commercial fog machine for flow visualization

Sound and Vibration Meters

Sound Level Meter Model 4431

Precision Sound Level Meter with 0-dB Function

The new Kanomax sound level meter is designed to be compact, lightweight and easy to use. It complies with the type 2 ANSI S1.4 1983 standard, and has an innovative, unique 0-dB feature that eliminates the self-noise of the microphone. This technology extends the lower limit of the measurement range to lower than 0 dB-SPL.

Features:

- Lightweight and compact design
- Equipped with highly sensitive electret condenser microphone
- Large 4 digit display with 0.1 dB resolution with backlighting and analog bar graph
- Add additional functions with the program cards
- Includes SD card for data storage, windshield, carrying case, AA batteries, hand strap, and calibration certificate

Optional program cards give you the flexibility to add additional functions as needed

Sound Calibrator

Sound Calibrator Model AC2127 implements stable and high-precision calibration by its feedback control function with temperature compensation.

Calibrator Specifications	
Model	AC2127
Microphone sizes	1 inch and 1/2 inch (1/2 inch microphone adapter is included)
Sound Pressure Level	94dB (+/-0.3dB)
Frequency Level	1000Hz (+/-0.1%)
Standards	IEC 60942: 2003 Class 1 JIS C1515: 2004 Class 1
Power Supply	2 x AA Batteries
Size & Weight	W4.3" x H2.9" x D1.8", Approx 0.3 lb. (150g)

Pistonphone

Model AC2124A is a standard sound source, which emits 124dB-SPL pure sine tone at 250Hz for calibration of sound level meter. This is used for precise calibration of sound level meter provided with 1-inch, 1/2-inch and 1/4-inch condenser microphones.

Pistonphone Specifications	
Model	AC2124A
Sound Pressure Level	124dB
Accuracy	+/- 0.2dB
Frequency	250Hz (+/- 2%)
Power Supply	4 x AA Batteries
Size & Weight	1.5" x 8.8", Approx 1.7 lb. (800g)

Sound Measurement Microphones

Features:

- Wide frequency range: wide range of measurement from low-frequency to ultrasonic frequency (1Hz to 200 kHz) is possible.
- Wide dynamic range: measurement of high sound pressure level up to 170dB is possible.
- Preamplifier integrated microphone: it is also possible to connect directly to an analyzer by using a BNC cable.
- High sensitivity and certain measurement: it is possible to connect directly to analyzer such as an FFT and is easy to measure with low sound pressure levels.

Preamplifier integrated microphone

The preamplifier integrated microphone is compatible with IEPE (Integrated Electronic Piezoelectric Microphone) and can be connected directly to an FFT analyzer or other analyzers, enabling measurements with a highly accurate resolution at low cost. Long-term stability is accomplished by an accelerated aging process under 360°C.

Vibration Meter Model 4200

Compact, Easy-to-Use Vibration Meter

The new Kanomax vibration meter is designed to be compact, lightweight and easy to use. The magnetic accelerometer attaches easily to machinery for increased accuracy and precise operation. It's the perfect tool to diagnosis problematic vibrations with your industrial machinery or manufactured products.

Features:

- Compact size maximizes technician mobility
- Magnetic accelerometer increases measuring accuracy and ease-of-use
- Includes meter, accelerometer with cable and magnet, contact pin, 2 x AAA batteries, carrying case, and Calibration Certificate

Vibration Monitoring System

Model ACCM-393 is a system to monitor vibration of machinery and other applications. It can quickly detect abnormal vibration condition and provide alarm signal. CM-393 is ideal for continuous vibration monitoring at power plants or production facilities. Either of 2 measurement modes, acceleration or displacement, can be easily selected on the front panel.

Includes storage case, 1 x acceleration pickup with built-in amplifier (Model 7828), pickup cable, and pickup cover.

Specifications

Model		ACCM-393

Dust Monitors

Piezobalance Dust Monitor Model 3521 / 3522

- Measures PM 10, Respirable, or PM 2.5 particle matters
- Real-time measurements of dust concentration
- Data logging up to 500 measurements
- Simple cleaning mechanism for easy maintenance
- Complete with data processing software, RS232C cable, cleaning kit, Ni-MH battery pack, AC adapter, carrying case, and calibration certificate

Digital Dust Monitor Model 3443

- Measures PM 10 particle matters
- Compact and Lightweight unit
- Analog output controls other devices
- Data logging up to 100,000 measurements
- PC interface with USB and software for downloading data to your PC
- Complete with rubber protector, shoulder strap, data processing software, USB cable, AC adapter, 2 pcs. LCD protective sheet, rubber cap, 2 pcs. filter, and calibration certificate

Piezobalance Dust Monitor Model 3521/3522

Optimal Tool for Monitoring Oil Mist

Features:

- Measures PM 10, Respirable, or PM 2.5 particle matters, such as dust, oil mist, fumes, and soot
- Real-time measurements of dust concentration
- Data logging up to 500 measurements and data may be reviewed on screen or printed
- PC interface with RS232C and software for downloading data to your PC
- Easy operation and requires no special training
- Simple cleaning mechanism for easy maintenance

Dust Measuring Methods

■ Piezobalance Method

An air sample enters the system, it travels through the impactor, which captures and removes larger particulates away from the sample. Smaller particulates become electrically charged and deposited on the piezo-crystal. The total mass of the deposited particulates affects the piezo-crystal's frequency. Since the change in frequency is proportional to the mass of the particulates, the actual weight of the particulates is obtained.

Since some particle matters such as oil mist absorb lasers, the Piezobalance dust monitor would be ideal (the light scattering method would not give correct measurements).

Applications:

- Monitoring milling operation
- Monitoring honing
- Monitoring boring operation

Monitoring Milling Operation

■ Light Scattering Method

When a laser hits particle matter, light scattering occurs. A dust monitor collects the amount of scattering light and calculates the mass concentration in proportion to the scattering light. Mass concentration is based on the density of particle matter, thus gravimetric sampling is required if the density is unknown.

Applications for light scattering dust monitor include Indoor air quality investigations, Point source monitoring, and Personal exposure monitoring.

Monitoring Welding Operation

Digital Dust Monitor Model 3443

Features:

- Measures PM 10 particle matters, such as dust, fumes, and smoke
- Real-time and long term measurements of dust concentration
- Compact and Lightweight unit
- PC interface with USB cable and software for downloading data to your PC
- Analog output controls other devices
- Data logging up to 100,000 measurements and displays MIN / MAX / AVG and Timing graph for review
- Complete with rubber protector, shoulder strap, data processing software, USB cable, AC adapter, 2 pcs. LCD protective sheet, rubber cap, 2 pcs. filter, and calibration certificate

CEGRIT Automatic Flyash Sampler

Isokinetic Sampling for Particle Emission Testing

With no moving parts, each CEGRIT sampler collects a sample from one point in the boiler duct. Operating on duct vacuum to drive its atmospheric-air ejector, the CEGRIT maintains near-isokinetic sampling to keep collecting unbiased sample as boiler load and duct vacuum vary.

Features:

- Operates continuously with no moving parts
- High efficiency sampling rate for fine pulverized dust
- Industrial construction
- Cyclone removes to facilitate periodic cleaning
- Two manometer tap points to monitor draft pressure

Applications:

- All combustion or other processes where airborne particle emission occur
- Smoke and particle emissions or grit burdens from boiler stacks
- Carbon determination in Fly ash
- Incinerator emission compliance

Particle Counters

Handheld Particle Counter Model 3887

Simple and easy-to-use, affordable handheld particle counter

- Simultaneously measures and displays 3 particle sizes
- Built-in flow sensor ensures high accuracy measurement
- Store up to 10,000 measurements
- PC interface with RS232C and software for real-time measurements and downloading data to your PC
- Complete with Isokinetic probe, zero filter, meter stand, data processing software, RS232C cable, 4 pcs. AA batteries, battery charger, AC adapter, and calibration certificate

Handheld Particle Counter Model 3886 Geo-α

Lightweight handheld particle counter with environmental sensors

- Simultaneous measurements of 5 particle sizes
- Air velocity, temperature, and humidity measurements with optional probes
- Data logging up to 500 measurements
- PC interface with RS232C and optional software for real-time monitoring with timing graph
- Includes zero filter, metal handle, 4 pcs. AA batteries, battery charger, AC adapter, and calibration certificate

Portable Particle Counter Model 3910 & 3905

Small footprint, lightweight portable particle counter available with two different flow rates

- Simultaneous measurements of 6 particle sizes
- 50.0 or 28.3 L/min flow rate
- Small footprint, Stainless enclosure
- Large touch screen LCD displays all measurements simultaneously
- Store up to 10,000 measurements
- PC software allows Remote control, Real-time measuring, and Registering map
- Complete with Quick-start guide, AC adapter, zero filter, Isokinetic probe with 79 inch (2 m) tubing, inlet nozzle, data processing software, memory card, 2 rolls of cleanroom-grade printer paper, Li-ion battery, and calibration certificate

Remote Particle Sensor with Analog Output

2-channel remote particle sensors for facility monitoring applications

Kanomax particle sensors with analog output are designed to fit into your existing monitoring system, or they can be used as a stand-alone unit to monitor a critical area when connected to an alarm or controller. The Kanomax particle sensor is available with a 1.0 CFM flowrate and also comes in two different ranges: 0.3 and 0.5 microns or 0.5 and 5.0 microns.

Features:

- Light scattering particle sensor
- 1.0 cfm flow rate (28.3 lpm)
- Analog output makes it easy to integrate into existing systems
- 0.3 or 0.5 micron sensitivity
- Compact body with stainless enclosure
- Fully compatible with the Kanomax Cleanroom Monitoring System as well as third party existing systems

Applications:

- Cleanroom Facility Monitoring
- Food Industry
- Aerospace
- Hospital Surgical Rooms

Power Supply	9 - 28V (AC adapter supplies 12V)	
Dimensions	W6.3" x H5.1" x D3.9"	
Weight	3 lbs (1.5 kg)	

Example Configuration: Shows 6 sensors connected to datalogger via the 4-20 mA output. It's easy to connect them to a datalogger or any other device that will accept an analog signal. Note that a vacuum source is required for the sensors.

Particle Sensors

Large Particle, PM and Pollen Sensors

The pollen sensor detects the particle with light scattering method, using one light emitter and two light receptors, and discriminates pollen from other particles with two factors "scattered light intensity" and "degree of polarization".

The large particle sensor is the sensor for industrial applications to detect particles sized over 10 micron. This sensor is used in production lines that dislike large particles.

"PM2.5" is known as the fine particle which is one of the cause of asthma or respiratory disease, etc. Especially, diesel soot commonly referred to as PM2.5 is suspected to raise the risk of lung cancer. Our PM sensor has a high correlation with Federal Equivalent Method (FEM) and achieves low-cost, simple installation for multipoint time-series monitoring.

Particle and Aerosol OEM Sensors

Designed for easy OEM Integration

Particle Sensor Units - Based on the light scattering method, it always detects airborne particles. Pulse output that corresponds to concentration per unit volume of particles can be obtained, with using an original detection method based on light scattered principle similar to the particle counter.

Aerosol Sensor Unit - Particulates of 0.5 microns or larger can be monitored. The aerosol sensor unit can be used to keep optimum driving of filtering equipment related to a clean room depending on actual condition of cleanliness level.

Features:

- Unique air sampling method using "heater" to generate updraft, preventing choked flow. Suction pump is not necessary.
- Stable and sensitive detection for particulates of 0.5 microns and larger can be monitored.
- Long life laser. 20,000 hours
- Compact size, low cost and easy to integrate into your original equipment.

Particle Sensor Applications:

- Air Purifier
- Air Quality Monitor
- Air Conditioner
- Ventilation
- Vacuum Cleaner

Aerosol Sensor Applications:

- Clean booth/small
- Fan Filter Unit
- Clean Unit
- Clean Room related filtration system

Particle Monitor AES-1000

Continuous Particle Monitoring for Modular Clean Room Applications

The AES-1000 particle monitoring system provides near real time stable particle measurements at low cost. Measurement covers the equivalent range of ISO class 5 through ISO class 8.

It uses a long life semiconductor laser to detect optical scatter by particles and an integral heater to provide continuous flow by thermal convection to provide a long maintenance free life.

Features:

- Stable and sensitive detection for particulates of 0.5 microns and larger.
- Easy-to-read air cleanliness level, equivalent of ISO5/ Class 100 -ISO8/Class 100,000.
- Unique air sampling method using “heater” to generate updraft, preventing choked flow. Suction pump is not necessary.
- Alarm comes on when the setting level goes beyond the required cleanliness, while monitor gives alarm signal output.
- Link to Ethernet system with purpose of monitoring at multiple locations.
- 20,000 hour long life laser.
- Compact and light, easy installation and Low cost.

Applications:

- Monitor cleanrooms
- Pharmaceutical / Semiconductor / Food Industry
- Buffer Zone Monitoring
- Indoor Air Quality

Cleanroom Monitoring System

The Kanomax Cleanroom Monitoring System (CRMS) provides an automated means to monitor and gather airborne particle counts and other parameter levels in controlled environments. The CRMS allows users to perform a variety of functions from a PC, including changing alarm settings and viewing particle count concentrations.

Features:

- Compact stainless enclosure with sensors
- Multi-parameter measurements: Particle count, Air velocity, Temperature, Humidity, and Differential pressure
- Multi-function, user-friendly monitoring software
- 1 PC system controls up to 128 sensors
- Alarm outputs: warning light, on-screen, or pager notification
- No system down-time: each sensor is replaceable for repair and recalibration

Particle Sensors

Features:

- Light scattering particle sensor
- Durable stainless enclosure is easy to sanitize during whole facility cleaning

Aerosol Particle Mass Analyzer

Portable Aerosol Mobility Spectrometer (PAMS)

Small, lightweight mobility size spectrometer

Features:

- Electrical mobility size spectrometer designed for portable, mobile, or handheld aerosol sampling applications
- Provides number-weighted diameter distribution of aerosols over the entire submicrometer range (10 to 863nm) in one scan
- Uses a non-radioactive bipolar aerosol charger to allow easy access to sampling sites with tight safety regulations
- Bipolar charger significantly reduces measurement uncertainty of larger particles in the submicrometer range
- Can be used in two modes: Single diameter count mode: to get a total count within a narrow size range or Size distribution mode: to get an automated size distribution measurement over desired size range or size resolution
- Stand-alone, battery-operated instrument; no external computer needed
- Weighs only 4.5 kg and measures 23 x 23 x 15 cm

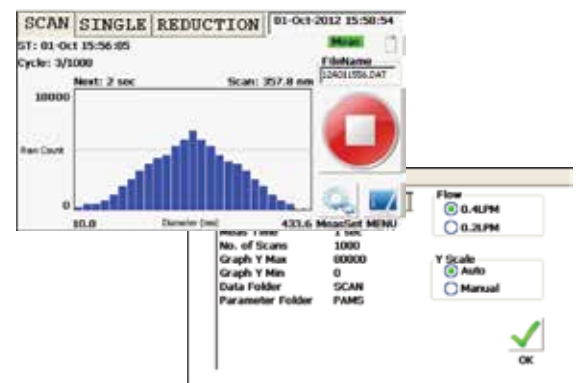

Operation:

Sampled aerosol is charge-conditioned using a non-radioactive, bipolar charger which brings the particles to steady-state charge distribution. Particles are subsequently sorted according to their electrical mobility in a differential mobility classifier (DMA). Classified particles are detected and counted downstream using a condensation particle counter (CPC).

Aerosol Particle Mass Analyzer Model APM-3601

Lightweight, Desktop Aerosol Particle Mass Analyzer

Aerosol Particle Mass Analyzer classifies particles by mass based on the balance between centrifugal force and electrostatic force. Particle size distribution measurement is normally used in order to measure nanosized particle distribution. While DMA (Differential Mobility Analyzer) classifies particles by particle size utilizing electrostatic force, APM classifies particles by mass based on entirely new classification principles. APM classifies aerosol particles of 0.01 ~ 100 femtograms. Particle density distribution can be attained by combining the APM and DMA.

Applications:

- Mass distribution measurements
- Particle density research
- Monodisperse aerosol generation

Features:

- Lightweight, Desktop Unit
- Measurement software, communication cable, extension board, extension adapter and box, and plastic case are available as options

Black Carbon Monitor Model 3130

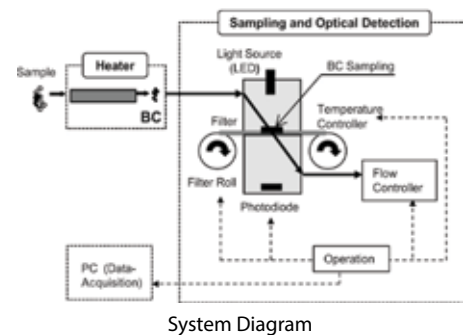

Continuous Soot Monitoring System

The Model 3130 monitors changes in transmittance across an automatically advancing quartz fiber filter tape using an LED at a 565 nm wavelength. To achieve measurements with high sensitivity and a lower detectable light absorption coefficient, the Model 3130 uses a double-convex lens and optical bundle pipes to maintain high light intensity and signal data, obtained at 1000 Hz.

Features:

- Measures black carbon concentration in the air in real time
- Preprocessing of sample air improves measurement accuracy
- Automatic filter feed enables continuous measurement for extended periods
- Advanced detection sensitivity enables measurement in low concentrated areas
- Complete with inlet heater, pump, pump controller, 2.5 µm-cut impactor, software, and power cable

Specifications	
Model	3130
Measurement Method	Light Absorption Method
Light Source	LED Wavelength 565 nm
Lowest Detection	0.05 µg/m ³ @1 min @0.8 L/min
Collection Flow Rate	0.8 L/min
Collection Filter	Fiberglass Filter (Length: 25 m)
PC Interface	USB
Power Supply	100 VAC, 6A
Dimensions	W 17" x H 8.7" x D 13.9"
Weight	37.5 lbs (17kg)

Nanosampler Model 3180

Inertial Filter for Aerosol Collection

Fiber filters utilize several mechanisms for aerosol collection such as inertial, gravitational settling, interception, and diffusion. Each collection efficiency depends on particle size and filtration velocity. Large particles are collected in a filter by inertial impaction at a high filtration velocity while small particles are removed from the air by Brownian diffusion. The Model 3180 controls its diffusion collection increasing filtration velocity, and collecting particles only by inertia.

Features:

- Particle classification as small as 0.1 µm
- 5 stages of PM10, 2.5, 1.0, 0.5, 0.1 and backup filter
- Large sample flow rate of 40 L/min
- Includes 1 box of quartz fiber filter (55mm x 100 pc.), and 5 sets of PM0.1 cartridge
- Pump unit (Vacuum pump + Rota meter with valve), PM0.1 cartridge case (1 case for 5 cartridges), Quartz fiber filter case (1 set of 20 cases), PM0.1 absorption materials (10 sets) are available

Specifications	
Model	3180
Classification Method	Inertial Collection
Classification Range	PM 10, PM 2.5, PM 1.0, PM 0.5, PM 0.1 and Backup filter
Absorption Material	Quartz Fiber Filter: PM 10, PM 2.5, PM 1.0, PM 0.5, and Backup filter SUS fiber: PM0.1
Sampling Flow Rate	40 L/min
Dimensions	∅ 3.5" x 8.3"
Weight	6.6 lbs (3 kg)

Dust Sentry

Accurate and affordable real-time outdoor particulate monitoring

The Dust Sentry provides real time, continuous particle measurement of TSP, PM10, PM2.5 or PM1 with datalogging and alarm relay outputs. Numerous integrated options including SMS and/or email notifications, weather sensors, noise and mounting equipment make the Dust Sentry a flexible base system suitable for a wide range of applications.

Features:

- Real time particle monitoring, Measures and reports data in 1 minute intervals
- Accurately measures TSP, PM10, PM2.5 or PM1
- On board data storage for up to 15 years of data
- Web-based and GSM data retrieval and alerts
- Gravimetric filter
- Option to integrate weather, wind, temp/RH sensors, and sirens
- Tough weatherproof enclosure with solar shielding for hot climates
- Quick installation and relocatable
- Datalogging and configuration software included

Cut Points Available	PM 10	PM 2.5	PM 1.0
Sample Flowrate	2.0 LPM		
Inlet	Heated		
Alarm	Relay and SMS (optional)		
Datalogging	2GB SD card (>15 years data storage)		
Reference Filter	25mm GF filter		
Outputs	RS232 & cellular IP Gateway		
Wireless Communication Options	Low power RF modem		
Environmental Operating Range	-10°C to +45°C; 10 to 95% RH (NC)		
Power Requirements	Mains (100 to 260VAC) or regulated 12VDC (10W)		
Enclosure	Lockable & weatherproof GRP cabinet IP65; 685 x 350 x 300mm (including solar shield armour & mounting brackets)		
Weight	<12kg		

Compared to reference-equivalent monitors like TEOMs and BAMs which lack sensitivity at short sampling periods, the Dust Sentry reports accurately at 1 minute intervals and has a much lower total cost of ownership (up to 5x less). In addition, the Dust Sentry is compact, re-locatable and can integrate wind and weather sensors for maximum utility.

■ Key Technology “Multi-Turn Time of Flight Mass Spectrometry”

There are four orbiting electrodes and two injection/ejection electrodes on a palm-sized optics bench. The ion source gives kinetic-energy for orbiting motion in the infinite loop. Injection and ejection electrodes are synchronized with ion source pulsing triggering. Injection electrode has to be in the on state while ions enter the analyzer, and then has to be turned off before first ion (smallest ion) returns to it. Orbiting electrodes are constant, so orbiting ion can be held until ejection electrode is ON.

Amenity Manikin System

Cabin Comfort Test Rig

Kanomax Amenity Manikin System is a solution for precise interior cabin comfort evaluation. The system measures parameters; air velocity, temperature, humidity, and radiant heat; which relate to human comfort level. One mannequin equips more than 120 sensors all over its surface and provides sophisticated measurement.

Features:

- 4 mannequins measure simultaneously; understanding the entire cabin
- Wireless connection brings easy operation
- Graphical software for both real-time measurement and data retrieval
- Excel compatible data output as well as saved graphical data for review

Vehicle Cabin Leakage Testers

Cabin Comfort Test Rig

Leakage testing is performed by pressurizing or depressurizing the vehicle cabin. The tester measures the changes in cabin pressure. The control unit consists of a manometer and pressure transducers. The manometer detects the leakage flow, which is calculated by measuring the nozzle pressure relative to static pressure. The tester controls an adjustable fan to maintain static test pressure. Five selectable inlet nozzles provide reasonable leakage flow rate measurements of 2.5 to 800 cfm.

1. The cab is pressurized (either positively or negatively)
2. Pressure will be stable, normally stable conditions are achieved quickly
3. The leakage rate is measured

Smoke Generator Model 8304

Smoke Generator for Air Flow Visualization

The Model 8304 is a smoke generator for wind tunnel testing and aerodynamics visualization. It produces vaporizing white smoke of 15 to 80L/min. Compressed air moves smoke to the comb-shaped nozzle and makes streamlines.

Nozzle

Features:

- Versatile and Portable unit
- High output, non-toxic, water-soluble smoke
- System cart, air compressor, and comb-shaped nozzle are available as options

Specifications	
Model	8304
Smoke Output	15 to 80 L/min
Smoke Particle Size	0.3 to 1.0 μm
Warm Up Time	4 minutes
Power Supply	AC100V, 550W
Dimensions	W11.8" x H13.8" x D25.6"
Weight	61.7 lbs (28 kg)

Fluid Mechanics Research Instruments

Smart LDV II

Compact LDV System

Two ion lasers from the fiber optic transceiver probe detect velocity measurement. Smart LDV System is an easy to use high quality LDV system.

Applications:

- Non-contact velocity measurements
- Wind tunnel studies
- Measurements in combustion, combustor

Features:

- Measure velocity of each bubble
- Applicable for non-conductive fluid
- Signal Processor is available for option
- Includes LDV probe with cable, Smart LDV driver, BNC-BNC cable, Interlock connector, probe support block, power cable, and probe case

Specifications

Model	Smart LDV II
Velocity Ranges	-40 to 100 m/s *Ask for above 100 m/s
Laser	Laser Diode: $\lambda = 660 \text{ nm}$, Optical power: 60 mW
Focal Distance	150, 200, 250, 300, 350, 400mm
Focal Point Size	0.13 mm x 1.3 mm
Probe Size	$\varnothing 61 \text{ mm} \times 312 \text{ mm}$
Shift Frequency	0.01 to 10 MHz (1-2-5 steps)
Signal Processing	8-bit FFT (512, 256, 128 points)
Max. Data Rate	16000 Data/sec

FLUOSTAR

Fluorescent Seeding Particles for PIV Applications

FLUOSTAR feature the outstanding emission efficiency of fluorescence, which are best suited for PIV applications. The strong orange-colored fluorescence may be even observed by sight using a 5 mW laser pointer.

Applications:

- Single-phase liquid flows
- Multi-phase flows
- Industrial large-scale flows
- Near-wall flows
- Stereo PIV

Features:

- Moderate size dispersity
- Uniform spherical shape
- Minimal photobleaching
- Minimal dye leaking
- No swelling or shrinking

Specifications

Substrate Material	Carboxy-modified acrylate resin
Refractive Index	1.560 (polymer)
Temperature	Resistant up to 100 Celsius (polymer)
Fluorescence dye	Rhodamine B (Excitation 550 nm / Emission 580 nm)
Density	1.1 g/cm ³
Size Uniformity	15 μm (Uniform spherical shape) Less than 20% C.V.
Sizes	1, 5, and 10g

Intelligent Hot Wire Anemometer Model IHW-100

The air velocity sensor is heated and temperature elevated (relative to the surrounding air) by means of control electronics. The circuit forces the voltage to be equal by means of an operational amplifier. Air flowing past the sensor tends to cool the sensor, thus driving down its resistance. The amplifier responds by immediately delivering more power to the circuit to maintain voltage equilibrium. Delivered power is converted into electrical signals to display.

Features:

- Highly responsive 2-channel flow measurement
- Software-controlled probe calibration, measurement, analysis, and display
- Variety of probes to meet individual measuring needs
- Automatic probe resistance measurement and setup by the built-in CPU
- Up to 4 units connected for 8 channels

Specifications	
Model	IHW-100
Composition	CTA, TEMP, CPU
Bridge Ratio	Approx. 10:1
Probe Current	Up to 500 mA
Frequency Response	10kHz at air velocity 9,840 fpm (50 m/s)
Temperature Compensation	32 to 122°F (0 to 50°C) with a copper-constantan thermocouple
Power Supply	AC 90 to 250V
Dimensions	W 16.9" x H 3.9" x D 11.8"(430 x 99 x 300 mm)
Weight	13.2 lbs (6 kg)

Option Probes

BubbleMaster

Void Fraction Measuring System

Bubble Master detects the change of reflection when a bubble passes through the tip of fiber optics sensor. System determines bubble size and its velocity from the passing time and the changing of reflection light.

Software Included

Features:

- Measure bubble size and velocity of each bubble
- Applicable for non-conductive fluid

Applications:

- Cavitation Research
- Nuclear reactor coolants
- Gaseous diffusion research

Specifications	
Model	BubbleMaster
Sensor Type	S-TOP: Single tip optical fiber T-TOP: 2 tips optical fiber F-TOP: 4 tips optical fiber
Applicable Bubble Size	From 1.0mm
Applicable Velocity	Up to 5.0 m/s

Open Jet Wind Tunnel

For airflow measuring instrument calibration

The general arrangement of the Open Jet Wind Tunnel covers a velocity range of 0.3 to 30 m/s and is designed for bench mounting.

Applications:

- Verification and calibration of anemometers and pitot tubes
- Capture hood calibration can be done with the detachable plenum chamber (option)
- NIST traceability
- Research and development

Specifications

Type	Open Jet
Velocity Range	0.3 to 30 m/s
Air Temperature	Ambient
Power Supply	Single phase 220-240 V 50/60 Hz *Other Voltages can be supplied to suit country requirements
Dimensions	Length: 5500 mm (basic setup)

Wind Tunnel setup at Kanomax calibration lab

■ Schematic of the wind tunnel

The wind tunnel fan delivers air into a 200mm diameter tube containing piezometric flanges for the orifice plates forming a quick changeover orifice plate measurement device. Four orifice plates are supplied to cover the full velocity range settings.

Following the orifice plate device is an expansion chamber with perforated screens to provide an even air flow through a final contraction section. Terminating at a sharp edged exit nozzle to Atmosphere, the Air Jet is delivered at test velocity.

Closed Circuit Wind Tunnel

For airflow measuring instrument calibration

The Kanomax wind tunnel is designed for the calibration of anemometers and pitot static tubes. The wind tunnel has a velocity range of 0.5 to 50 m/s (98 to 9842 ft/min) and can also be used for small scale aerodynamic experiments.

Applications:

- Verification and calibration of anemometers and pitot tubes
- NIST traceability
- Research and development

Specifications

Type	Gottingen (closed circuit)
Velocity Range	0.5 to 50 m/s
Air Temperature	Ambient
Cross Section	150 x 150 mm
Power Supply	Tri-phase 380V 50Hz 6KVA
Dimensions	W3000 x H1600 x D1000 mm
