LAUNCH CABLES

Launch cables are used to reduce the effect deadzones caused by mechanical connection of the OTDR to the Fibre under Test. Constructing a backscatter trace before the Near end connector enables the technician to evaluate the connector for Insertion Loss & return Loss. Also known as a Pulse Suppressor.

From left to right:

- LC150SCPCMM 150 metre Multimode Launch cable
- LC2000SCUPCSM 2 km Singlemode Launch cable
- LC-500 Patch Panel Matrix with 1 m SC/PC-SC/PC patch cable

Features

- Universal compact design
- Rugged construction

Benefits

- Troubleshoot the input connector and the initial fibre span that may be masked by the deadzone of an OTDR
- Characterise input and output connectors and the entire fibre link
- Minimise Dead zones
- Eliminate multiple patch cables
