

Ligno-Scanner D moisture meter

Description:

The Ligno-Scanner D is a pinless moisture meter for wood with a $\frac{3}{4}$ " measuring depth.

Wood Moisture Meter:

The Ligno-Scanner D is a preferable tool for cabinetmakers and hardwood floor installers and inspectors. You can scan large numbers of boards, detect higher moisture levels and water pockets. This meter is an indispensable tool when assessing water damage and determining moisture content on finished materials. Meter can also be used when measuring engineered flooring.

This meter has a unique feature that includes 71 species settings or specific gravity settings 0.3-1.0. Lignomat's pinless meter also gives moisture readings in percent moisture content. There is also an additional reference scale when measuring non-wood building materials that can be used for comparative readings.
