The ML8000 Series Metallurgical Microscope is equipped with either an erect image binocular or regular trinocular viewing head inclined at 30° and rotatable through 360° for comfortable viewing. Each eyetube is provided with a graduated dioptre adjustment. Interpupillary distance is adjustable between 52mm and 72mm.

EYEPIECES:

Paired DIN KHW10X super wide 20mm field of view eyepieces.

OBJECTIVE CHANGER:

Smooth operating quintuple ball-bearing nosepiece.

OBJECTIVES:

Infinity corrected, S. Planachromat M4X/0.10, M10X/0.25, M20X/0.40, M40X/0.65

ILLUMINATORS:

Vertical full Koehler illuminator with 6V 30W halogen lamp for brightfield and polarization technique, with infinity lens. Electronic transformer with intensity control supplied in a separate case. Blue clear, green clear, ND8 Neutral density and polarizing filters supplied in mounts.

Transmitted Koehler illuminator with 6V 30W halogen lamp with electronic transformer and intensity control built in the microscope base.

STAGE:

Large scan 4" x 4" ball-bearing mechanical stage with 94.5mm diameter clear glass stage plate, with drop-down coaxial axis controls with X/Y movement.

CONDENSER:

Rack and pinion focusable substage condenser with iris diaphragm and filter tray, including clear blue filter.

FOCUSING MOVEMENT:

Coaxial low position coarse and fine focus controls, graduated to 2 micron per division, are fitted with tension adjustment and safety autostop. The focusing range is 35mm. The movement runs in extra wide precision ball-bearing tracks.
