How-to use this catalogue

This catalogue contains a very broad range of accessories and you should find exactly what you want. For most fixture types all you will need is a part number, which is indicated in a specification table associated with the accessory:

| DATASHEET | | | | | | | | | | |
|---------------------------|---------------|---------|----------|-----------|---------------|-------|------------|-------|--------|---------|
| Part No. | Load Capacity | | | Thread 1 | Diameter (ØA) | | Height (B) | | Weight | |
| 432-346 | 5 kN | 500 kgf | 1100 lbf | 10-32 UNF | 50 mm | 1.97" | 13 mm | 0.51" | 50 g | 0.11 lb |

Select the part number from the specification table

Note: All accessories are sold individually unless specified otherwise.

Catalogue Listing

The catalogue is divided into two main sections. At the front is a concise listing of the accessories with a description, photograph, schematic drawing indicating the fundamental dimensions and the specification table:

Slotted Compression Plates

Slotted compression plates allow for escape of air from containers under top-load testing where a centring cone is unsuitable.

[DATASHEET](#)

| Part No. | Load Capacity | | | Thread 1 | Diameter (ØA) | | Height (B) | | Weight | |
|----------|---------------|---------|----------|-----------|---------------|-------|------------|-------|--------|---------|
| 432-346 | 5 kN | 500 kgf | 1100 lbf | 10-32 UNF | 50 mm | 1.97" | 13 mm | 0.51" | 50 g | 0.11 lb |

Catalogue listing entry

Datasheets

The second section contains datasheets for those accessories where further details are relevant. The electronic version of this catalogue will have a hyperlink to the datasheet in the listing entry.

More complex fixtures, such as bend jigs, can be built from user specification, comprising a number of parts. These accessories have their specification table in the datasheet which provides more detail for selecting the correct part. The catalogue listing will show the following information with the datasheet link:

[DATASHEET](#) [QC](#)

| Part No. | |
|----------|--|
| Mec103 | Please see data sheet for full details |

Click on the button to go to the datasheet

Refer to the datasheet for selecting part numbers for complex fixtures

If you cannot easily find what you want, or you are unsure, please call us, and we will be able to advise you. We also have a custom fixture design and manufacture capability, with expert engineers.

QC Fittings

Accessories with Quick Change QC fitting will have a hyperlink labelled 'QC' to jump to the appropriate section within the catalogue. Please see table above for example of QC Hyperlink button.

About Mecmesin

Mecmesin has been a specialist designer and manufacturer of force and torque testing equipment since 1977. Based in the UK, we have offices in six countries and distributors in over 50 more. Our aim has always been to provide cost-effective solutions to in-house product testing, from hand-held instruments to custom-built automation systems. Mecmesin is an established, leading, and trusted brand worldwide.

The systems and instruments we provide combine accuracy, reliability and affordability, in a range to suit all kinds of product testing. They are widely used in quality assurance situations, frequently on the production line or shop floor, where their robust design is ideal for continuous use with low training requirement. Design laboratories also represent a large part of our client base, where the computing power of our top-range systems is essential. Our gauges and instruments are market leaders, for their accuracy, reliability and sheer ruggedness.

Users of Mecmesin systems can be found across a very wide range of industries for an extremely diverse spread of applications. We frequently meet these needs by combining our standard products with customised solutions. Our highly talented and experienced engineers design bespoke systems, grips and fixtures to ensure optimal testing of any product presented to us.

The importance of force and torque testing

The testing of products in-house brings control to engineering processes, guaranteeing fit-for-purpose functionality and allowing design optimisation. Mecmesin equipment provides the capability to meet quality standards for both internally manufactured and externally-sourced products and materials from suppliers.

Further benefits of testing include:

- Quality assurance protects your brand reputation and market position.
- Quality assurance demands standardised testing, whether to ASTM, BS, DIN, ISO, an industry body, or an internal corporate standard.
- Standards require systems that ensure repeatability from day to day and from site to site, anywhere in the world.
- Design frequently includes materials content optimisation; testing designs for strength and fitness for purpose are an essential component.
- Testing to detect problems before they affect production, minimises wastage.

Your choice of grips and fixtures

Mecmesin supplies a full range of approved grips and fixtures for use with all our systems and instruments.

However, in testing flexible, moulded or asymmetric items, custom grips are often required. We have an expert in-house design and manufacturing facility for these specific needs.

Comprehensive product range

Our modular product range includes test systems, instruments and accessories designed and manufactured to suit all force and torque test applications and environments.

Test systems have three distinct designs to meet different user-interface requirements, computer-controlled, touch screen controlled and motorised systems. Our systems measure force from 0.5 kN to 50 kN and torque from a few mN.m to 10 N.m.

For less exacting applications we have a range of force and torque gauges and table top manually operated instruments measuring up to 2.5 kN and 10 N.m respectively.

Comprehensive Product Range

Support and services

Our team of expert applications and service engineers are there to support you with a range of professional services. We can help you select the right test solution, including grips and fixtures, provide demonstrations, pre-program your system, install and train users, followed by full after-sales service.

- Comprehensive global network of international distributors
- 24 month warranty
- On-site installation and training
- Application support
- Online helpdesk live web chat
- Calibration and service centre
- Custom built systems
- Bespoke grips and fixtures

Selecting the Most Appropriate Grips

Holding specimens in the most uniform manner is one of the basic requirements for obtaining reliable and repeatable test results. When selecting the best grips for a particular application there are a number of considerations. The specimen must be held in such a way that it does not slip within the grips nor should the specimen break at the jaw. Alignment of the grips is essential to ensure the forces are applied 'in axis' between the loadcell and the test frame. International test standards often define a type of grip to be used, which makes selection straightforward. However in most cases the choice of grip is often affected by the need to test a wide variety of different specimen shapes and materials. This situation lends itself to more 'general purpose' grips which can be tailored to several applications by choosing from a number of jaw faces to suit the material or component being held.

Other factors such as throughput of testing and ease-of-use play an important role in deciding which grip to choose. Whilst 'general purpose' grips have advantages in terms of flexibility, it can be time-consuming, particularly when testing small batches of differing specimen geometries, to have to change over jaw faces. In the long run it may be more cost-effective to select dedicated grips for certain applications and use the 'QC' (quick-change) connection to swiftly exchange complete grips.

The following Glossary section provides an overview of the various types of grips and fixtures available from Mecmesin. Each grip-type is listed in its own category under a summary-section. Within the summary you will see a link to the datasheet for each individual grip which provides comprehensive technical details and drawings to aid you in your selection.

If your application requirements are very specific to your product or component and you do not see a 'standard' grip, please consult our team of application-engineers who will be happy to use their vast experience to work with you to design and manufacture a custom grip.

Compression

Compression tests are performed to evaluate the performance of a material or component under gradually increasing compressive load. This usually involves compressing a specimen to a pre-defined load limit and measuring its deformation or alternatively compressing the specimen until it breaks or cracks.

Specimens can be compressed between two uniform compression fixtures (e.g. plates) or alternatively the specimen can be placed on the base of a testing machine and compressed from above by a single compression fixture (e.g. probe).

The selection of compression fixtures should be determined by the variety of different shapes and sizes of the specimens you need to test plus the surface finish best suited to the application.

Compression Plates

Compression Fixtures should be selected to suit the contact area of the sample which is to be tested. They are typically available as round, square or rectangular plates with either a threaded connection or a quick-change (QC) fixing.

A variety of surface finishes and configurations are provided:

- Nickel plated compression plates have a coating, which helps to prevent rust.
- Hardened and ground compression plates have a smooth, scratch-proof surface ideal for compression testing on samples such as tempered springs which could damage a standard compression plate.
- Rubber-faced compression plates have a protective layer, which helps to prevent damage from metal-to-metal contact during a compression test.
- Self-levelling compression plates are ideal for precise compression testing on a range of materials and finished products. Self-levelling allows exact parallelism to be set between the upper and lower plates—ideal for those applications where it is critical to accurately measure the deformation of a sample.
- Vented compression plates are ideal for top-load/crush testing of materials or products which contain air (e.g. empty PET bottles, foam, etc.). It allows for release of air from within the container whilst it is being compressed thereby avoiding potential measurement errors caused by measuring the force to compress the internal air.

Probes

Probes are designed primarily for penetration and puncture resistance testing. There are a variety of tip profiles and sizes available (e.g. cone, chisel, radiused) to simulate the real-world conditions under which a specimen may be compressed.

Load buttons or extension rods can also perform the same function as a probe to measure the compressive strength of small components such as push-button switches.

Flexure/Bend Jigs

Flexural load tests are popular since they closely characterise how a material or component may perform during its lifetime. As such they are often used to determine the mechanical properties of a whole range of materials including plastics, metals, wood, paper & board, ceramics.

'Flexure bend' tests usually draw upon loading at 3 or 4 points:

- The **3-point bend test** uses a jig which has 2 parallel 'lower' anvils to support the specimen. A single 'upper' anvil positioned exactly half-way between the 2 'lower' anvils is used to apply compressive load to the specimen to determine its material characteristics. The 3-point test is used mainly for elastic and ductile materials.
- The **4-point bend test** differs in so far as there are 2 'upper' anvils which apply compressive load to the specimen and are positioned symmetrically around the 2 'lower' anvils. The 4-point test is used mainly for determining the properties of brittle materials.

In both 3-point and 4-point bend tests the 'upper' and 'lower' anvils can be fixed, rotating or tilting according to the requirements of the test standard. Rotating anvils help minimize the effects of friction by allowing longitudinal movement. Tilting anvils ensure parallel contact with the specimen throughout the test.

Anvils can be radius-type or roller-type and may be held in a fixed position or be free to move. In addition the 'lower' anvils can be selected to make contact with the specimen at a single point or dual points.

The span of the anvils is set by manual positioning against a ruler-tape which indicates the span distance and using an allen key to secure. Alternatively support beams are available with leadscrews whereby anvil positions can be adjusted by using a hand-wheel.

Dedicated compression fixtures

Dedicated compression fixtures are purposely designed to meet the challenges of a specific application. The requirements for the fixture may be outlined in an international test standard (e.g. ISO, ASTM standards for compressive shear testing) or they may come from industry requests to provide an appropriate attachment for holding specific components (e.g. long flexible springs).

Mecmesin offers a range of dedicated compression fixtures to suit common requirements. For non-standard applications a team of design-engineers is available to work with you to find a suitable solution to meet your technical and budgetary requirements.

Tension

There are in essence two types of tensile grips:

- a) **'Self-tightening'** whereby the clamping force to hold the specimen increases as tensile load is applied. This is achieved by the action of wedges, levers, eccentric cams/rollers and pincer-scissors, which all move to tighten their hold as tensile load is applied during the test thereby reducing the risk of slippage.
- b) **'Side-action'** whereby the clamping force to hold the specimen is independent of the tensile load applied. The clamping force is achieved by parallel jaw faces which are set to a certain position by a screw-action or via pre-loaded springs. As the specimen decreases in thickness when it is stretched during the test there is a commensurate reduction in clamping force exerted by the 'fixed position' parallel jaw faces potentially increasing the risk of slippage. Such grips are 'screw-action' Vice Grips, Pinch Grips, Toggle Grips, Claw and Chuck Grips.

Please note that the tensile load rating provided for all grips is for indication only. It is dependent on a number of factors including the surface hardness of the material being held, the jaw faces selected, how much pre-tension is applied, etc.

Additionally, in the case of pneumatic grips, the clamping force is dependent on the pressure applied. As a general guide we advise 'clamping force x 50% = tensile load rating'. Example: a pneumatic grip with a nominal clamping force of 7kN at 7 bar (max. 16 bar) is rated to a tensile load of 3.5kN at 7 bar, 5kN at 10 bar and 8kN at 16 bar.

Self-tightening Tensile Grips

Wedge Grips - consisting of 2 interchangeable or fixed jaws in the shape of a wedge which are secured in a metal body. Designed such that, when under tension, the two jaw faces are drawn tighter together in a firmer hold upon the specimen. For specimen removal /insertion the wedge-jaws are quickly and easily opened/closed by using a lever to move them up and down within the body. The initial clamping force to hold the specimen before the test begins is achieved by tension springs acting to bring the wedge-jaws together.

An ideal 'general-purpose' grip for testing plastic and metal dumbbells, sheets, strips and other flat or round specimens.

Cam Grips - operate by virtue of one or two opposing eccentric cams increasing their clamping force upon the specimen as tensile load is applied. The initial clamping is achieved by the cam being spring-loaded or having a lever-action to facilitate quick insertion and removal by the operator.

Suitable for soft and flexible plastics, rubbers and textiles.

Scissor Grips - self-tightening and self-aligning with the specimen initially being held by spring tension. The ratio of clamping force to tensile force changes in proportion to the opening width—therefore the wider the opening, the stronger the clamping force exerted upon the specimen. Available with locking function to facilitate removal of the specimen after testing.

Suitable for highly ductile plastics and elastomers.

Belt and Strap Grips - typically of a split-roller type in order to provide a rounded, smooth-surface around which a belt or strap can be looped several times. As the tensile load is applied the belt self-tightens around the roller providing excellent clamping force.

Suitable for flexible belts, straps and webbing of textile and plastic materials.

Side-action Tensile Grips

Vice Grips (Single-action) - having one fixed jaw against which a second parallel jaw is tightened. The position of the fixed face may be adjustable to accommodate differing specimen thickness. They may be manually screw-operated, or pneumatic.

Vice Grips (Double-action) - having two adjustable parallel jaws to enable in-axis alignment of the test specimen. They may be manually screw-operated, or pneumatic.

Vice grips are typically used in pairs and are available with an extensive selection of interchangeable jaw faces and sizes.

Vice Grips are an ideal 'general-purpose' grip for testing thin sheets, films, foils, tapes and various

plastic, metal and textile fabrics.

Pinch Grips - designed for small-area contact to grip a specimen. Hinged with a screw-action mechanism to simultaneously open/close both jaws.

Suitable for low force pull-off tests of components, adhesive bonds, etc.

Bollard Grips - provide a rounded surface around which a specimen is curved or wound several times before its end is clamped between jaws. Contact with a greater surface area provides increased friction which reduces the risk of specimen slippage. Also helps avoid 'point contact' which can cause cutting, indentation or tearing of delicate specimens.

Suitable for strings, wires, filaments and yarns.

Claw Grips and Chucks - designed to either grip a cylindrical test specimen directly, or to grip a thin probe, such as a needle for penetration testing. Often used to help grip irregular shaped objects.

Suitable for low force pull-off tests of round components or joints.

Hooks - Round hooks are suitable for samples with loops, such as some springs, O-rings and seals. Peg hooks can engage smaller attachment holes in thinner and stiffer samples than round hooks.

Flexible Links - added into tension fixtures to allow a certain amount of lateral movement for maintaining natural axial alignment. This is particularly useful to allow a specimen with an off-centre connecting piece or tab to straighten, peel or tear.

Selecting Jaws for Tensile Grips

Choosing the most appropriate jaw type for a tensile grip can be tricky. It is a balance between having sufficient hold of the specimen to prevent it slipping and not having too 'aggressive' a hold which damages the specimen. Below is a simple guide with tips on jaw selection to assist you:

Blank

Diamond

Rubber

Pyramid

'V'

Wave

Blank Jaws - for smooth surfaced materials. Allows user to machine or affix own surface (eg. emery paper)

Pyramid or Diamond Jaws - for materials which need a "bite" to secure a good grip (e.g. soft metals {aluminium, copper, soft steel}, paper and board)

Rubber Jaws - for fragile samples, which may get weakened by pinching at the contact-edge of the grip. (e.g. thin films, filaments, fibres and thin aluminium)

V Jaws - for round samples where flat jaws do not provide enough surface contact (e.g. wires, rods, tubes)

Wave Jaws - for slippery materials which need more surface contact to secure a good grip (e.g. textiles, fabrics and tissues)

Specialised Jaws

Line-contact Jaws - for thin materials, requiring a point contact to determine the true gauge length of the specimen between the grips (e.g. rubber, textiles or paper). These jaws have a radiused contact face and are supplied with the equivalent rubber coated flat-faced jaw for the opposing jaw surface. Only to be used where specified in international standards. Available for several side-action grips, please contact Mecmesin with your requirements.

Line-contact

Torque

Torque grips are designed to hold a sample vertically and precisely about its rotational axis. The choice of grip depends on the symmetry and shape of the sample. Since there are far fewer international testing standards relating to torque which define specimen forms and dimensions, it is often the case that a suitable 'standard' grip cannot be found. In this situation a custom grip will be needed - these can be designed and made by Mecmesin engineers to suit your exact requirements.

Fixing Tables

Torque Fixing Tables typically comprise 2 threaded carriers whose position is controlled by a stainless-steel leadscrew. 4 rubber-coated pegs are affixed to the carriers and adjusted for holding and centring test specimens about the rotating axis. Fixing Tables attach either directly to the torque sensor or to the motor-spindle of a Motorised Torque Stand.

Saddle Plates

Saddle Plates are an additional accessory to fit onto Fixing Tables for specimens with irregular underside on their base, which are not best suited to positioning on carriers/leadscrews. The Saddle Plate provides a stable flat base for placing such specimens perpendicular to the torque sensor thereby improving accuracy and repeatability of testing.

V-Blocks

V-blocks are available in 2 versions.

- a) They can be provided as an additional accessory for use with standard Fixing Tables where they act as a substitute for the rubber-coated pegs. They consist of 2 V-shaped, rubber-coated jaws at a desired angle to maximise the contact area with the specimen and thereby minimise the risk of slippage.
- b) They can be provided affixed to their own dedicated fixing table with jaw profiles and coatings to suit the specimens being tested.

Chucks

Chucks are designed to grip a cylindrical test sample directly. They are available in 3-jaw or 4-jaw versions with various jaw profiles.

Mandrels

There are two versions of mandrels available to grip closures for torque testing.

- a) "Split-mandrels" - this comprises 2 mandrel halves which have been machined to suit a narrow span of closure diameters and profiles. The closure is located between the halves and is gripped by tightening the mandrels using a leadscrew.
- b) "Dedicated mandrels" - machined specifically as an exact fit to match the profile of a single closure type. The mandrel is placed upon the closure and the mandrel is then 'driven' by a holder to apply the required torque. The mandrel can then move vertically which is essential for testing screw-type closures. 'Dedicated mandrels' are made to the user's specific design requirement.

Calibration Check Rig

A calibration check rig will give an indication whether a torque sensor lies within acceptable tolerance limits of its calibration—often used to make a simple verification check of accuracy between recalibration periods. It is not a substitute for official calibration and adjustment by an approved calibration laboratory.

This page is intentionally left blank

Quick Change QC fittings

How QC fittings work

QC fittings are mainly to standard post diameters of 20 mm or 32 mm. Smaller fixtures may have a QC diameter of 15.9 mm, for which you will require a QC converter.

The fixture is presented to the post, and a pin inserted through holes in the fixture sleeve and post, and secured with a clip.

Lighter QC fixtures can be mounted on a simple post (Type A or J) attached directly to either a loadcell or stand anvil by means of a grub screw. Whilst this is simpler, the orientation of the securing pin may not be ideal.

432-282

432-418

Larger fixtures are mounted onto a post with a broader base (Type C or L). This base is screw-mounted onto the anvil or stand base, and requires an additional single-screw mounting plate for attachment to a loadcell. These QC mounts also have a screw collar for tightening the fixture against the locking pin.

432-284

432-451

To convert a non QC type grip to a QC type, attach a female sleeve (Type B or K) to the grip.

432-429

*Take great care when selecting grips for use with loadcells below 50 N to avoid risk of overload.

DATASHEET

Loadcell QC fitting

| Loadcell | Capacity | Thread | Mounting plate | Part no. | Post & pin | Post Ø | Part no. |
|-----------|--------------|-----------|----------------|----------|------------|--------|----------|

Compression

Compression testing takes many forms, from testing the hardness or compressive strength of a material or manufactured product, to how it deforms and/or recovers, or its resistance to penetration. Compression testing can be used to test an insertion force or sharpness of a needle, or the strength of an adhesive bond under shear. Measuring these forces requires test systems and fixtures that ensure precise repeatability through correct alignment and gripping.

Types of compression test for which we can supply fixtures

- ultimate compressive strength
- break stress
- single pellet crush
- top-load (column) crush
- box crush (BCT)
- edge crush (ECT)
- ring crush (RCT)
- compressibility and recovery
- top load, glass containers
- lap shear under compression
- double sandwich shear
- compressive shear
- laminates compressive shear stress
- puncture shear
- three-point bend
- four-point bend
- cantilever bend
- ball burst
- short span compression
- short beam shear strength
- needle penetration
- cone penetration
- compressive hardness
- compressive hardness
- penetration resistance
- circular bend
- compressive strength
- five point bend
- flat crush (FCT)
- compressive deformation
- pinch
- bursting strength (sheet rupture)
- puncture resistance
- compressive burst

Compression plates: fixed

Compression

Nickel-Plated Compression Plates

Nickel-plated compression plates are resistant to rusting.

Applications:

- metals
- cylinders
- cubes
- mortar
- cement
- plaster

DATASHEET

| Part No. | Load Capacity | | | Thread 1 | Diameter (ϕA) | | Height (B) | | Weight | |
|-------------|---------------|---------|----------|-----------|-----------------------|-------|------------|-------|--------|---------|
| 432-119 | 5 kN | 500 kgf | 1100 lbf | 10-32 UNF | 12 mm | 0.47" | 12 mm | 0.47" | 6 g | 0.01 lb |

DS-1002

Rubber-Faced Compression Plates

The rubber-faced compression plate has a rubber layer which helps to prevent damage to the sample that would occur from metal contact during a compression test. Also increases grip at the point of force application on low friction or curved specimens.

Applications:

- metals
- glass
- slippery or curved samples

DATASHEET

| Part No. | Load Capacity | | | Thread 1 | Diameter (ϕA) | | Height (B) | | Weight | |
|----------|---------------|---------|----------|-----------|-----------------------|-------|------------|-------|--------|---------|
| 432-219 | 2.5 kN | 250 kgf | 550 lbf | 5/16 UNC | 50 mm | 1.97" | 17 mm | 0.67" | 84 g | 0.19 lb |
| 432-220 | 5 kN | 500 kgf | 1100 lbf | 10-32 UNF | 50 mm | 1.97" | 13 mm | 0.51" | — | — |

DS-1003

Compression plates: fixed

Compression

Hardened and Ground Compression Plates

Hardened and ground compression plates have a smooth, scratch-proof surface ideal for compression testing on samples that could damage a standard compression plate, such as metal springs.

Applications:

- springs
- bottles
- cans
- polymer foams

DATASHEET

| Part No. | Load Capacity | | | Thread 1 | Diameter (ØA) | | Height (B) | | Weight | |

Compression plates: self-levelling

Compression

Spherically-Seated Self-levelling Compression Plate, QC fitting

Spherically-seated self-levelling compression plates are ideal for general compression testing on a range of materials and finished products. Self-levelling allows parallelism to be set for those applications where it is critical to accurately measure the deformation of a sample, or where the sample has faces that are not exactly parallel and conventional plates would put an undue load on a very small area, causing a premature failure. QC fitting.

Compression Probes

Compression

Radiused Probes

Radiused probes are used to perform penetration or puncture tests on a wide range for texture products. The radiused tip is specifically designed for penetrometry tests, including the determination of the firmness and ripeness of foods. Also used for cosmetics and similar products with measured texture attributes.

Applications:

- Baked goods
- Dairy products
- Fruit and vegetables
- Confectionery
- Cosmetics
- Gels

Bend Jigs

Compression

Mec22 50 kN Bend Jig (Aluminium), QC fitting

A 50 kN bending fixture in aluminium, with a bending span of 330 mm and a beam width of 100 mm. The main support bears two Type AX anvils, and an upper OX anvil, with 10 mm, 20 mm and 30 mm diameter rollers as standard. The addition of an upper anvil support converts this to a 4-point or 5-point bend jig. Attaches to QC adapter mounts.

DS-1020

Bend jigs to your own specification

Bend jigs can be assembled to user specification to meet test requirements:

- load rating
- anvil edge type
- anvil height
- individual positioning of anvils, or by centric gearing using a leadscrew / handle.
- bending span width
- anvil movement type
- 3 or 4-point bend capability
- anvil mount type
- anvil width

Certain anvil types allow a rocking movement, adjustable angle (articulated), or flat sideways movement. For sharp angle bending (e.g. to 160°) long-fin anvils are available, along with other specialised anvils. Standard anvil types are shown below. (Roller size is denoted by diameter, milled edges are denoted by radius.)

Lower Anvils

Type A: dual-radius

A: milled edge

AX: v-notch roller bearings

Type C: single radius

C: milled edge

CX: v-notch roller

CL: captive roller

CM: roller free to traverse

Type CW, carrier style

CW: milled edge

CWX: v-notch roller

CWL: captive roller

CWN: roller traverses to stop

Upper Anvils

Type O

O: milled edge

OX: v-notch roller bearing

OWX: carrier-style v-notch

How to specify your particular bend jig requirement

Let us know your requirement by:

- beam model: Mec238, Mec103, Mec22 and length (long versions available)
- aluminium or steel, and finish (where available)
- anvil mount type as above (A, C, CW, O, with extra designation of W, X, L, M or N where appropriate)
- the upper and lower anvil radii type (milled or rollers) with dimensions
- any special requirements such as anvil height or width, or movement
- if you require centric gearing (Mec103 only)
- if you require an upper support for two anvils for 4-point testing
- the QC coupling size (20 mm or 32 mm)

For full details and examples, refer to the datasheets for the three base models: Mec238, Mec103 and Mec22.

Puncture & Penetration jigs

Compression

Perpex 45° Cone Probe with Extension Rod

The perspex cone probe has a 45° angle, and is used for texture testing to assess characteristics such as hardness and spreadability.

Applications:

- food products
- cosmetics

DS-1172

Introduction

Tension

Tension

Tension testing is used to measure the tensile strength of a material or manufactured product, to how it deforms and/or recovers under elongation, or the strength of an adhesive bond under shear or pull-off. Tension testing can be used to test the removal force for a crimped joint, the peel strength of flexible adhesive joints, resistance of sheet materials to tearing, or the coefficient of friction between surfaces. Measuring these forces requires test systems and fixtures that ensure precise repeatability through correct alignment and gripping.

Types of tension test for which we can supply fixtures

- ultimate tensile strength
- tensile strength
- elongation at break
- yield point
- shear in tension
- laminates tensile shear stress
- T-peel
- 90 degree peel
- 180 degree peel
- moving table peel
- floating roller peel
- peel wheel test
- loop tack
- climbing drum peel
- single rip (trouser) tear
- double rip (tongue) tear
- trapezoidal tear
- wing tear (Winkelman/Graves)
- single lap shear
- double lap shear
- friction, static and kinetic
- pull-off / pull-out
- butt joint
- parallel plate adhesion
- Delft tear
- tensile deformation
- 135 degree peel
- push-off / push-out
- grab method (fabrics)
- strip method (fabrics)

Round Hooks

Round hooks are general purpose, suitable for any sample with a loop, eyelet or similar feature. Often used with a digital force gauge to perform tensile tests on tension springs.

Applications:

- tension springs
- any sample with a loop or eyelet

DS-1051

Bollard & Roller grips

Tension

Spring-Loaded Fold Grip, QC fitting

The Spring-loaded fold grip is a self-tightening grip with a spring-loaded roller for holding flexible samples firmly as load is applied. Sample material is wound around the cross hatch knurl of the 10 mm (0.39") diameter roller and held in contact with the serrated rear body, preventing slippage within the grip.

Applications:

- elastomers
- films
- polymers
- rubber
- fabrics
- leather

DS-1052

Small Circular Bollard Grip, QC fitting

Small circular bollard grips are made from aluminium and are designed for testing delicate, flexible samples such as fine threads, wires and yarns, which may break easily when clamped. The maximum capacity is 100 N. The sample is wrapped around the bollard and the free end is held tightly in place using a pair of friction washers and a thumbscrew.

Applications:

- fibres
- filaments
- threads
- yarns
- twines
- fine wires

DS-1054

Heavy-duty Belt Grips, QC fitting

Heavy-duty belt grips are designed for testing high-strength belts and straps such as conveyor belts, which require specialised grips to prevent sample slippage. By winding the sample around the split bodies the stresses in the specimen are distributed. Self-tightening for effective tensile testing up to 10 kN. Grips are supplied in pairs.

Applications:

- conveyor belts
- plastic and metal strapping
- seat belts
- webbing

DS-1057

Pinch grips

Tension

Small Pinch Grip

Pinch grips are lightweight miniature vice grips, which use a hinge action to initially grab a sample, with a wing nut to tighten the jaw faces. Each 10 mm x 10 mm (0.39" x 0.39") jaw face has a slight groove to hold the sample securely, yet avoid inducing a break within the grip. Pinch grips are particularly well suited for peel testing of thin plastic films.

Applications:

- woven yarn
- tissue
- thin films

DATASHEET

| Part No. | Load Capacity | | | Thread 1 | Jaw Opening (A) | | Jaw Width (B) | | Length (C) | | Weight | |

U-Form Vice Grip, Double-action, 5 kN - Aluminium, QC fitting

U-form vice grips have dual side-action screw grips to enable wide specimens to be clamped quickly and securely. Available fitted with one of five different types of jaw faces: smooth, rubber-coated, pyramidal-faced, wave-form and diamond-faced to securely grip most materials. Jaws may be ordered separately.

Applications:

- thick films
- polymers
- leather
- foam
- light metal/alloys

Vice grips: Double-action Tension

Small Parallel Grip

The small parallel grip has a rigid body with individually controlled serrated jaws. A floating ball screw attachment ensures central loading with correct alignment during tensile testing, and wing screws are used to easily adjust grip faces.

Applications:

- flexible sheet materials
- textiles
- tape
- laminates
- paper

DS-1074

Lightweight Double-action Vice Grip

Lightweight double-action vice grips are suitable for holding small, delicate samples, particularly when using low capacity loadcells. Available fitted with one of two different types of jaw faces: rubber-coated or pyramidal-faced, to securely grip most materials. Often used with the chain link assembly for ease of sample loading.

Applications:

- light fabrics
- foils
- plastic films
- card & tissue
- packaging materials
- paper
- yarns
- wire

DS-1077

Pneumatic grips

Please note that the tensile load rating provided for all grips is for indication only. It is dependent on a number of factors including the surface hardness of the material being held, the jaw faces selected, how much pre-tension is applied, etc.

Additionally, in the case of pneumatic grips, the clamping force is dependent on the pressure applied. As a general guide we advise 'clamping force x 50% = tensile load rating'. Example: a pneumatic grip with a nominal clamping force of 7kN at 7 bar (max. 16 bar) is rated to a tensile load of 3.5kN at 7 bar, 5kN at 10 bar and 8kN at 16 bar.

2.5 kN U-Form Pneumatic Vice Grip, QC fitting

A highly versatile pneumatic grip for use in applications where material is sensitive to damage or slippage when clamped and the tensile force is significant.

Available in single actuation version.

Applications:

- plastics
- textiles
- thin metals

DS-1082

500 N and 200 N Wedge Grips

The 200 N / 500 N wedge grip is a small, lightweight grip designed for tensile testing. As load is applied, the wedge action of the jaws increases the grip on the sample. A spring-loaded lever allows the serrated jaws to open and close easily for the fast securing and release of samples. The 200 N grip includes the chain link assembly for ease of loading samples. A slot in the back accommodates samples wider than the jaws.

Applications:

- crimp and welded joints
- wires
- laminates
- flexible sheet materials
- films
- textiles

DATASHEET

| Part No. | Load Capacity | | | Thread 1 | Jaw Width (A) | | Jaw Opening (B) | | Height (C) | | Weight | |

25 mm/50 mm "Grab Test" Textile Fixture

The 25 mm/50 mm "grab test" textile fixture has 2 different-sized jaws to comply with standard methods for textile strength and elongation.

DATASHEET

| Part No. | Load Capacity | | | Thread 1 | Jaw Opening (A) | | Jaw Width (B) | | Height (C) | | Weight | |
|----------|---------------|--------|---------|-----------|-----------------|-------|---------------|-------|------------|-------|--------|---------|
| 432-323 | 500 N | 50 kgf | 110 lbf | 10-32 UNF | 23.5 mm | 0.93" | 25 mm | 0.98" | 74 mm | 2.91" | 400 g | 0.88 lb |

DS-1102

Extended Peg Hook (Bow Pull-off Test)

The extended peg hook is used for securely attaching samples of decorations when carrying out test-to-failure tests on textiles and clothing adornments, for example a bow. Often used with the 25 mm / 50 mm 'Grab Test' textile fixture.

Applications:

- bows

DATASHEET

| Part No. | Load Capacity | | | Thread 1 | Length (A) | | Peg Length | | Peg Ø | | Weight | |
|----------|---------------|-------|--------|-----------|------------|-------|------------|-------|-------|-------|--------|---------|
| 432-181 | 50 N | 5 kgf | 11 lbf | 10-32 UNF | 97 mm | 3.82" | 9 mm | 0.35" | 2 mm | 0.08" | 42 g | 0.09 lb |

DS-1034

Pinch Grip (for testing bows, appliques, patches)

Pinch grips are lightweight miniature vice grips, which use a hinge action to grab a sample and a wing nut to tighten the jaw face. Each jaw face has a slight groove to hold the sample securely, yet avoid inducing a break within the grip.

Applications:

- thin film
- tissue
- woven yarn

DATASHEET

| Part No. | Load Capacity | | | Thread 1 | Jaw Opening (A) | | Jaw Width (B) | | Length (C) | | Weight | |
|----------|---------------|--------|--------|----------|-----------------|-------|---------------|-------|------------|--------|--------|---------|
| 432-280 | 200 N | 20 kgf | 44 lbf | M6 | 9 mm | 0.35" | 12 mm | 0.47" | 95 mm | 3.744" | 70 g | 0.15 lb |

DS-1058

Modified Large Wedge Grip

The modified large wedge grip has a shorter body with longer jaws to be able to securely hold S-spring poppers for tensile test-to-failure. As load is applied, the wedge action of the jaws increases the grip on sample.

Applications:

- poppers
- press studs

DATASHEET

| Part No. | Load Capacity | | | Thread 1 | Jaw Opening (A) | | Jaw Width (B) | | Length (C) | | Weight | |
|----------|---------------|---------|---------|-----------|-----------------|-------|---------------|-------|------------|-------|--------|---------|
| 432-212 | 1 kN | 100 kgf | 225 lbf | 10-32 UNF | 11 mm | 0.43" | 25 mm | 0.98" | 160 mm | 6.30" | 166 g | 0.37 lb |

DS-1099

Textile attachment grips

Tension

3-Jaw Popper Pull-off Fixture

This fixture has 3 jaws and a swivelling action to securely hold 13-15 ligne poppers for tensile test to failure.

Applications:

- poppers
- press studs

DATASHEET

| Part No. | Load Capacity | | | Thread 1 | Sample Min./Max. Ø | | Popper Size | Length (C) | | Weight | |
|----------|---------------|--------|---------|----------|--------------------|---------------|---------------|------------|-------|--------|---------|

DS-1100

Popper Cam Base

The popper cam base is secured to the base of a test stand to test the strength of poppers and press studs. The popper is fed through the retaining hole and positioned over the retaining post. The lever of the cam mechanism is locked down to raise the popper with the fabric so that it can easily be gripped - typically the 3-jaw popper pull-off fixture.

Applications:

Used by clothing manufacturers for test-to-failure testing for compliance with BS 7907:2007 on poppers and press studs

DATASHEET

| Part No. | Load Capacity | | | Thread | Popper Size | Length (C) | | Weight | |
|----------|---------------|---------|---------|-----------|---------------|------------|-------|--------|--------|
| 432-179 | 1 kN | 100 kgf | 225 lbf | 10-32 UNF | 13 - 15 ligne | 68 mm | 2.68" | 760 g | 1.7 lb |

DS-1101

Specialist tension fixtures

Tension

V-jaw Vice Clamps, QC fitting

Two V-jaw Vice Clamp versions are available, each with opposing V-shaped, serrated rubber-faced jaws. These securely grip samples made of smooth or low-friction materials, such as plastics. The three-jawed version features a quick-release toggle-action lever.

Applications:

Used for tensile testing of:

- Plastic container closures; pull-off, disassembly resistance
- Opening force of pull-up, sports style or flip-cap closures
- General product or packaging pull test

DATASHEET

| Part No. | Load Capacity | | | Post Ø | Opening Range | | Lateral Adjustment | | Height | |

DS-1107

Cork Extraction Test Rig

The cork extraction test rig is used to test the extraction force of bottle stoppers. It has a bottle cradle with an antislip surface and is easily adjusted to accommodate different bottle heights, e.g. 200 ml to 750 ml. It is used in conjunction with corkscrew test accessories suitable for testing natural and synthetic corks.

DATASHEET

| PDV11086 | 1 kN | 100 kgf | 225 lbf | 4x M5 | 13 mm | 0.51" | 450.5 mm | 17.34" |

DS-1108

General (tension and compression)

This section covers a number of grips and fixtures, which can be used either under compression or tension or both - for example a pin chuck can be used to pull a thin rod or it can hold a needle for pushing into a membrane for a puncture test.

It also covers accessories such as interface cables, battery chargers and dust covers, which are suitable for general use with many instruments and test systems from Mecmesin.

Sections covered are:

- Chucks
- Manual Handling Accessories
- Miscellaneous Accessories
 - Chargers
 - Interface cables
 - Safety guards
 - Dust covers & protective bellows
 - Feet kits for test stands

Pin Chuck

Pin chucks are specifically designed for gripping circular or rod-type specimens, or needles for sharpness testing.

Applications:

- pin or rod components

DS-1109

Manual Handling Accessories

General (tension and compression)

Force Gauge Gripping Cradle

This cradle allows Mecmesin gauges to be used more easily as hand-held instruments. The dual-handle design allows the comfortable application of push/pull loads, with increased stability. Attachment screws supplied

Applications:

- doors
- filing cabinets
- emergency push bars
- handles and controls

[DATASHEET](#)

| Part No. | Load Capacity | | | Handle Diameter (ØA) | | Handle Length (B) | | Width (C) | |

DS-1110

Trolley-Pushing Fixture

The trolley-pushing fixture has been designed to attach to trolleys, carts and wheelie bins so that manual handling measurements can be made more easily. Typically used with a force gauge fitted to the force gauge gripping cradle or pistol grip (order separately).

Applications:

- trolleys
- carts
- wheelie bins

[DATASHEET](#)

Test Stand Safety Guards and Interlock Override Plug

Health and safety are of paramount concern when using machinery with moving parts and motorised test equipment is no exception. Safety guards prevent access by the operator to the testing area whilst the test is in progress, acting as a barrier from moving parts where there exists a risk of hands and arms getting caught.

Mecmesin test system can be supplied with a standard safety guard. In addition, due to individual requirements for accommodating different-sized grips and samples, safety guards are often made to custom design. Please contact us with your requirements and details of your stand model.

DS-1122

Crosshead Extension

The crosshead extension allows the loadcell on a single-column MultiTest stand to be positioned further from the column, to accommodate larger test samples.

[DATASHEET](#)

| Part No. | Thread 1 | Depth (A) | |
|----------|----------|-----------|-------|
| 432-307 | M5 | 16 mm | 0.63" |
| 432-508 | M5 | 38 mm | 1.50" |

DS-1122

Mounting brackets

Adapters (tension and compression)

Extended Dovetail Bracket

The extended dovetail bracket is used for mounting Mecmesin Advanced Force Gauge (AFG) and Basic Force Gauge (BFG) force gauges to the crosshead of manual and motorised test stands, to allow precise lateral alignment of the gauge. The extended length provides 70 mm (2.76") of extra daylight. Supplied with socket-head fixing screws M5 x 10 mm.

DATASHEET

| 432-427 | 80 mm | 3.15" | 25 mm | 0.98" |

DS-1123

CFG+ Mounting Plate

The CFG mounting plate allows a Mecmesin Compact Force Gauge+ (CFG+) to be mounted onto the crosshead of a test stand. Supplied with 4 x M3 fixing screws.

DATASHEET

| Part No. | Height (B) | | Width (A) | |
|----------|------------|------|-----------|-------|
| 432-131 | 56 mm | 2.2" | 9 mm | 0.36" |

DS-1123

Torque

Torque testing involves measuring what it takes to rotate one component against another. Bearings, for example, are meant to rotate very freely, and the torque testing measures unevenness in manufacture or wear, or the torque required to initiate free-running rotation. Other tests involve fastening or closure, and the torque required to secure or release a screw cap or a screw fastener. In manufactured products, tolerances in torque performance are crucial. In some cases, torque and force are combined, for example to extract a crown cork from a bottle, or release a child-resistant closure from a container. Measuring these turning forces requires test systems and fixtures that ensure precise repeatability through correct alignment and gripping.

Types of torque test for which we can supply fixtures

- removal torque
- strip torque
- incremental torque
- bridge torque
- reverse ratchet torque
- breakaway torque
- running torque
- rotational shear
- fastening torque
- breaking torque test

Mounts for Torque Sensors

Bench Mounting Stands are equipped with fixing holes to enable secure and stable support for Mecmesin Static Torque Sensors when in use on a table or work-bench. Two versions are available; for mid & hi-torque 'ST' Torque and for 'TS' Torque Screwdrivers.

DATASHEET

| Part No. | Type | Depth (A) | | Width (B) | |
|----------|-----------------------------|-----------|------|-----------|-------|
| 432-401 | Mid & hi-torque 'ST' Torque | 155 mm | 1/2" | 190 mm | 6.10" |
| 432-402 | 'TS' Torque Screwdrivers | 76 mm | 3/8" | 170 mm | 6.10" |

DS-1029

Mini V-block

The mini V-block is a precision-engineered mounting block which allows smaller samples to be securely held in a centrally-aligned position, without excessive clamping force. For use with Orbis and Tornado.

Alternative V-block fixtures to hold irregular-shaped samples can be manufactured for specific requirements.

Contact Mecmesin for details.

DATASHEET

| Part No. | Thread 1 | Jaw Opening | | Height (A) | |
|----------|----------|-------------|--------------|------------|-------|
| 432-423 | 4 x M4 | 5 - 26 mm | 0.2" - 1.02" | 54 mm | 2.13" |

DS-1139

3-Jaw and 4-Jaw Torque Chucks

A range of key-operated and keyless Torque Chucks are available in 3-jaw or 4-jaw versions. Suitable for use with either Vortex, Helixa or 'TS' Torque Screwdrivers.

No drawing available

DATASHEET

| Part No. | Jaw Size | Weight | |
|----------|----------|--------|---------|

DS-1130

Closure Mandrels

Specifically designed to grip closures for torque testing. Available in two designs:

- 'Split mandrels' - comprising 2 mandrel halves which have been machined to suit a narrow span of closure diameters and profiles.
- 'Dedicated mandrels' - machined specifically as an exact fit to match the profile of a single closure type.

Contact Mecmesin with your specific requirements.

DATASHEET

DS-1104

Fixing Tables for Torque Testing

Developed specifically to fit to the Vortex or Helixa range of Torque Testers. Upper Fixing Tables connect directly to the respective torque sensor and Lower Fixing Tables connect to the motor spindle of the Vortex or Helixa.

Upper and Lower Fixing Tables can be used in combination with each other. Alternatively they can be used individually in conjunction with other torque grips or custom fixtures. They are a useful general- purpose grip offering highly versatile clamping of specimens, being fully adjustable to accommodate a variety of forms.

[DATASHEET](#)

Please see datasheet for full details

DS-1132

V-jaw Clamps for Helixa

Features V-shaped rubber faces with an angle of both 90 and 120 degrees to suit various small or low-friction specimen geometries. The jaws can be easily removed and reversed by means of the fixing screws. Stable clamping is achieved by two vertically-spaced jaws and a single opposing jaw.

This accessory fits to the Helixa's Precision Lower Fixing Table (432-600).

[DATASHEET](#)

Please see datasheet for full details

DS-1132

V-jaw Clamps for Vortex/Orbix/Tornado

Features V-shaped rubber faces with an angle of both 90 and 120 degrees to suit various small or low-friction specimen geometries. The jaws can be easily removed and reversed by means of the fixing screws. Stable clamping is achieved by two vertically-spaced jaws and a single opposing jaw.

This accessory fits to the Helixa's Precision Lower Fixing Table (432-600).

[DATASHEET](#)

Please see datasheet for full details

DS-1132

Set of 4 pegs; standard and extended lengths

These pegs attach to the upper and lower fixing tables to keep samples secure during torque testing. The extended length pegs are to keep taller samples vertically aligned.

[DATASHEET](#)

DS-1134

| Part No. | Thread 1 | Diameter Ø | | Length (A) | |
|----------|----------|------------|-------|------------|-------|
| 432-447 | M6 | 16 mm | 0.63" | 35 mm | 1.38" |
| 432-250 | M6 | 16 mm | 0.63" | 100 mm | 3.94" |

Saddle Plates

For 1.5 N.m and 3 N.m Tornado. Saddle plates provide a more stable base on which to mount awkwardly shaped samples. Held in place by standard or extended pegs.

See datasheet for detailed drawing

Saddle plates provide a more stable base on which to mount awkwardly shaped samples. Held in place by standard or extended pegs. For Orbis, Tornado or Vortex.

DS-1136

Orbis and Tornado Mk II, and Vortex Torque Cell, Check Calibration Rig

This bench-top unit enables the on-site verification of the calibration status of Orbis MkII, Tornado MkII testers, and static torque sensors rated from 1.5 N.m to 10 N.m. Using dead-weight masses, the kit allows you to quickly decide whether or not adjustment, recalibration or repair is required. The kit does not replace the need for regular professional calibration.

DATASHEET

Part No.

432-621

Please see datasheet for full details

DS-1142

Torque Reference Bottles

The Torque Reference Bottle (also known as 'Gold Bottle') provides a means of quickly verifying the calibration of motorised torque measuring systems Helixa and Vortex. Its magnetic clutch repeatedly slips at a factory-set, specified torque value. The Torque Reference Bottle is available in three nominal torque values—the part number-suffix indicates the value in N.m.

DATASHEET

| Load measurement | |

Nickel Plated Compression Plates

Description

Nickel plated compression plates are resistant to rusting.

Supplied individually.

Applications

Used for compression testing of:

- metals
- mortar
- cement
- plaster

Rubber-Faced Compression Plates

Description

The rubber-faced compression plate has a rubber layer which helps to prevent damage to the sample that would occur from metal contact during a compression test. Also increases grip at the point of force application on low friction or curved specimens.

Supplied individually.

Applications

Used for compression testing of components:

- metals
- glass
- slippery or curved samples

Hardened and Ground Compression Plates

Description

Hardened and ground compression plates have a smooth, scratch-proof surface ideal for compression testing on samples that could damage a standard compression plate, such as metal springs.

Supplied individually.

Applications

Used for compression testing of:

- springs
- bottles
- cans
- polymer foams

Compression Plates, Rectangular, QC fitting

Mec36

Mec36-Al Aluminum compression plate

- Soft samples, cardboards, plastics, etc.
- Aluminium anodised
- Max capacity:
with QC 20 bore-hole = 25 kN
with QC 32 bore-hole = 50 kN
- Scope of supply 1 plate

Mec36L Aluminum plate

- Perforated plate allows air to be released when sample is compressed - suitable for foam testing
- Aluminium anodised
- Diameter of holes: 6 mm spaced every 20 mm
- Max capacity:
with QC 20 bore-hole = 25 kN
with QC 32 bore-hole = 50 kN
- Scope of supply 1 plate

Mec36-St Steel compression plate

- For hard materials, steel, plastics, stone, etc.
- Hardened steel
- Max capacity:
with QC 20 bore-hole = 25 kN
with QC 32 bore-hole = 50 kN
- Scope of supply 1 plate

Vented Compression Plates

Description

Vented compression plates are ideal for top-load/crush testing of containers such as PET bottles. Two circular vents allow air to escape from the container during compression and an integrated nose cone helps to position containers centrally, minimising bottle slippage during testing. These compression plates are suitable for bottles with necks up to 50 mm (1.97") in diameter.

Supplied individually.

Applications

Used for compression testing of:

- plastic bottles
- PET containers

Self-levelling Compression Plates, QC fitting

MecS223

Self-levelling compression plates are ideal for precise compression testing on a range of materials and finished products. Self-levelling allows exact parallelism to be set between the upper and lower plates—ideal for those applications where it is critical to accurately measure the deformation of a sample.

The MecS223 range of hardened steel self-levelling plates features a spherical seating mechanism which allows the plate to 'float' and adjust to the specimen geometry during the compression test. Alternatively there are 4 nuts which can lock the self-levelling plate in position when it has been set completely parallel to the opposite 'fixed' plate (type Mec23).

MecS223k self-levelling plates are fitted with QC-20 mm bore hole adaptors suitable for compressive load applications up to 25kN (e.g. metals, rigid plastics etc.).

MecS223g self-levelling plates are fitted with QC-32 mm bore hole adaptors suitable for compressive load applications up to 50kN (e.g. metals, concrete etc.).

Ordering Information

Scope of delivery: 1 plate

MecS223k for 20 mm coupling (B)

| Item No. | Diameter (A) | Weight |
|--------------|--------------|-----------|
| MecS223k-56 | 56 mm | ~ 1.27 kg |
| MecS223k-96 | 96 mm | ~ 1.4 kg |
| MecS223k-116 | 116 mm | ~ 1.7 kg |
| MecS223k-156 | 246 mm | ~ 2.7 kg |
| MecS223k-196 | 196 mm | ~ 3.95 kg |

MecS223g for 32 mm coupling (B)

| Item No. | Diameter (A) | Weight |
|--------------|--------------|----------|
| MecS223g-56 | 56 mm | ~ 5.3 kg |
| MecS223g-96 | 96 mm | ~ 6.1 kg |
| MecS223g-116 | 116 mm | ~ 6.5 kg |
| MecS223g-156 | 156 mm | ~ 7.1 kg |
| MecS223g-196 | 196 mm | ~ 7.4 kg |

Other dimensions on request

MecS223▲

The fixed plate Mec23 can be combined with a MecS223 self-levelling plate to form a pair of plates between which specimens are compressed.

MecS223k-116

Self-levelling Compression Plate

Description

Self-levelling compression plates are ideal for general compression testing on a range of materials and finished products. Self-levelling allows parallelism to be set for those applications where it is critical to accurately measure the deformation of a sample, or where the sample has faces that are not exactly parallel and conventional plates would put an undue load on a very small area, causing a premature failure.

Supplied individually.

Applications

Used for compression testing of:

- metals
- cylinders
- springs
- cans
- polymer foams
- curve-faced samples

Radiused Probes

Description

Radiused probes are used to perform penetration or puncture tests on a wide range of products. The radiused tip is specifically designed for penetrometry tests, including the determination of the firmness and ripeness of foods. Also used for cosmetics and similar products with measured texture attributes.

Applications

Used for penetration and puncture testing of:

- Baked goods
- Dairy products
- Fruit and vegetables
- Confectionery
- Cosmetics

20 kN 3-Point Bend Jig, QC fitting

Description

The 20 kN 3-point bend jig is ideal for performing a variety of flexure tests on medium-stiffness samples. It includes two lower support-anvils, which are adjustable and one upper anvil to apply load to the sample. The support beam is graduated lengthways in metric and imperial units for accurate positioning of the anvils.

Applications

Used to determine the flexural properties of rigid and semi-rigid materials:

- ceramics
- glass
- composites
- plastics
- flexible sheet materials
- wood
- films

Specifications

| Part No. | Load Capacity | | | Post Ø | Anvil Width | | Anvil Radius | | Bending Span | | Length | | Weight | |
|----------|---------------|----------|----------|----------|-------------|-------|--------------|------|----------------|----------------|--------|--------|---------|----------|
| 432-266 | 20 kN | 2000 kgf | 4500 lbf | QC 20 mm | 50 mm | 2.28" | 10 mm | 0.4" | 24 mm - 300 mm | 0.94" - 11.81" | 380 mm | 14.96" | 12.4 kg | 29.46 lb |

Dimensions mm (inch)

For more information on QC fittings, refer to datasheet 431-354

2.5 kN 3-Point Bend Jig

Description

The 2.5 kN 3-point bend jig is an easy-to-use fixture that relies on the test machine to maintain alignment between the top and bottom parts.

Applications

Used to determine the flexural properties of rigid and semi-rigid materials:

- ceramics
- glass
- composites
- plastics
- flexible sheet materials
- wood
- films

Specifications

| Part No. | Load Capacity | | | Thread 1 | Anvil Width | Anvil Radius | | Bending Span | | Length | | Weight | | |

1 kN 3-Point Bend Jig

Description

The 1 kN 3-point bend jig is a lightweight three-point bend assembly with 60 mm high arms and 120 mm support span. Ideal for most snapping applications including food texture applications. Recommended for use with 'S' Beam type load cells where forces are below 1 kN.

Applications

Used to determine the flexural and snap properties of:

- food products
- flexible materials

Specifications

2.5 kN Bend Jig, QC fitting

Mec238 - aluminium

A 2.5 kN Bend Jig in aluminium having a bending span up to 150 mm and a beam width of 30 mm.

A comprehensive selection of Mec238 anvil types and sizes are available to allow you to configure for 3-point or 4-point flexure bend testing.

'Upper' anvils and the 'lower' bending beam are supplied fitted with a bore hole to allow connection to a QC-20 fixing post.

Below you will see an example configuration showing:

- 'Lower' anvils Type A = 'dual' anvil having milled edge radii of 2mm and 3mm
- 'Upper' anvil Type O = single anvil having milled edge radius of 2mm
- 'Lower' bending beam (B) of 150mm length with QC-20 bore hole

This generates a combined part number of : Mec238-AR3R2-OR2-B150-QC20

Dimensions mm

The illustrations overleaf are selected examples of the component parts and assemblies to build precisely the bending jig you require. You choose:

- Bending beam length (lower)
- Bending beam length (upper) ... only applicable if you wish to perform 4-point flexure bend testing
- 'Lower' and 'Upper' anvil type (roller or milled-edge) and their dimensions
- Special requirements (eg. Wide anvils for large specimens, tall anvils for folding tests, movement in anvils for increased accuracy)

Please refer to the outline at the back of this datasheet for how to identify and specify the components you require.

Bend jig configurations

3-point bending jig

Lower radii 1, 2, 3, 4, 5, 8, 10
Upper radius 0.5, 1, 2, 3, 4, 5, 8, 10

4-point bending jig with interchangeable rollers on CX anvils

4-point bending jig with interchangeable rollers
Lower AX supports
Upper CX supports
Width 30 mm

Interchangeable rollers
diameter 6 mm, width 100 mm

300 mm beam with supports
for interchangeable rollers

Anvils

Anvil with dual milled radii, 2 mm and 5 mm ×2
Available radius pairs (mm):
1.5+2.5; 2+3; 2+5; 3.2+5;
4+5

Anvils with 1 milled radius edge ×2
Available radius: 0.5; 1; 1.5;
2; 2.5; 3.2; 5 mm

Special anvils with 1 milled edge ×2
CR1H130 = radius 1 mm,
height 130 mm

Anvil for interchangeable rollers ×2
Diameters 1 to 12.7 mm

Anvil for single interchangeable roller ×2

Flat simple anvil, interchangeable roller, for glass ×2

no image available

Roller, hardened, width 30 mm ×3
Diameters: 1; 2; 2.5; 3;
3.175; 4; 4.5; 5; 6; 6.35; 8;
9; 10; 12; 12.7 mm

Roller with special length + 2 O-Rings + 2 extra pins to fix or magnets to fix 3x56; 3x105; 6x105; 10x105 ×3

Beams

200 mm lower beam, anodised aluminium ×1

200 mm lower beam, chromed steel ×1

300 mm lower beam, chromed steel ×1

350 mm lower beam, chromed steel ×1

400 mm lower beam, chromed steel ×1

Removable insert anvils

Articulated lower carrier for removable inserts; can be fixed at an angle ×2

Removable insert for interchangeable roller retained by O-rings ×3

Articulated carrier for removable insert with interchangeable roller retained by O-rings ×2

Flat removable insert for glass ×2 no image available

Removable insert for interchangeable roller retained by O-rings Roller diameter 5 mm on a flat plane area, height 3 mm ×2

Wide fin removable insert for articulated carrier ×3

Radius 2 mm, width 120 mm

Zero-span removable insert ×2

Upper anvils

Upper anvil with milled radius 1; 1.5; 2; 3; 4; 5; or 12.5 mm ×1

Upper v-notch anvil to carry different diameters ×1
OX2 holds 1–3.2 mm Ø
OX8 holds 4–12.7 mm Ø

Articulated upper carrier for removable anvil inserts; can be fixed at an angle For inserts see Mec238-W ×1

Articulated upper carrier with insert for interchangeable rollers retained by O-rings ×1

Special anvils

Anvil with removable needle-bearing insert ×2

Support with integral roller, centerline radius 5 mm ×2

Support with diameter 10 mm tube, width 100 mm ×2

Support with non-interchangeable 60 mm wide anvil, radius 1.5 mm, for 4-point bend system ×4

Bend jigs to your own specification

Bend jigs can be assembled to user specification to meet test requirements:

- load rating
- anvil edge type
- anvil height
- individual positioning of anvils, or by centric gearing using a leadscrew / handle.
- bending span width
- anvil movement type
- 3 or 4-point bend capability
- anvil mount type
- anvil width

Certain anvil types allow a rocking movement, adjustable angle (articulated), or flat sideways movement. For sharp angle bending (e.g. to 160°) long-fin anvils are available, along with other specialised anvils. Standard anvil types are shown below. (Roller size is denoted by diameter, milled edges are denoted by radius.)

Lower Anvils

Type A: dual-radius

A: milled edge

AX: v-notch roller bearings

Type C: single radius

C: milled edge

CX: v-notch roller

CL: captive roller

CM: roller free to traverse

Type CW, carrier style

CW: milled edge

CWX: v-notch roller

CWL: captive roller

CWN: roller traverses to stop

Upper Anvils

Type O

O: milled edge

OX: v-notch roller bearing

OWX: carrier-style v-notch

How to specify your particular bend jig requirement

Let us know your requirement by:

- beam model: Mec238, Mec103, Mec22 and length (long versions available)
- aluminium or steel, and finish (where available)
- anvil mount type as above (A, C, CW, O, with extra designation of W, X, L, M or N where appropriate)
- the upper and lower anvil radii type (milled or rollers) with dimensions
- any special requirements such as anvil height or width, or movement
- if you require centric gearing (Mec103 only)
- if you require an upper support for two anvils for 4-point testing
- the QC coupling size (20 mm or 32 mm)

For full details and examples, refer to the datasheets for the three base models: Mec238, Mec103 and Mec22.

For more information on QC fittings, refer to datasheet 431-354 Adapters for QC range of grips.

50 kN Bend Jig (Aluminium), QC fitting

Mec22 - aluminium

A 50 kN Bend Jig in steel having a bending span up to 330 mm and beam width of 100 mm.

A comprehensive selection of Mec22 anvil types and sizes are available to allow you to configure for 3-point or 4-point flexure bend testing.

'Upper' anvils and the 'lower' bending beam are supplied fitted with a bore hole to allow connection to either QC-20 or QC-32 fixing posts ... please specify which size when ordering. When used with the QC-20 fixing post, the maximum rated capacity is 25 kN.

Below you will see an example configuration showing:

- 'Lower' anvils Type AX = 'dual' roller bearings in a v-notch having diameters of 10mm and 30mm
- 'Upper' anvil Type OX = roller bearing in a v-notch having diameter of 30mm
- 'Lower' bending beam (B) of 360mm length with QC-32 bore hole

This generates a combined part number of : Mec22-AX30_10-OX30-B330-QC32

Dimensions mm

The illustrations overleaf are selected examples of the component parts and assemblies to build precisely the bending jig you require. You choose:

- Bending beam length (lower)
- Bending beam length (upper) ... only applicable if you wish to perform 4-point flexure bend testing
- 'Lower' and 'Upper' anvil type (roller or milled-edge) and their dimensions
- Special requirements (eg. Wide anvils for large specimens, tall anvils for folding tests, movement in anvils for increased accuracy)

Please refer to the outline at the back of this datasheet for how to identify and specify the components you require.

Example configurations

3-point bend jig, 600 mm beam with AX type lower dual v-notch rollers of diameters 30mm and 10mm. Roller width 160 mm

Upper OX type v-notch roller of 30 mm diameter

4-point bend jig, 1000mm lower beam, 'lower' anvil type C of radius 10mm & height of 200 mm.

'Upper' beam 600mm, 'upper' anvils OWX rollers diameter 20 mm,

3-point bend jig, 360 mm beam with CW type 'lower' carrier roller of diameter 15mm. Rollers are articulated to provide an adjustable angle for maintaining parallelism during test

4-point bend jig 1200 mm lower beam

'lower' anvil type CX rollers of 20mm.

'Upper' beam 600mm, 'upper' anvils OX rollers diameter 20 mm

3-point bend jig, 800 mm beam with CX type 'lower' v-notch rollers of diameter 15 mm, width 350 mm. 'Upper' OX roller diameter 30 mm, width 350mm.

4-point bend jig, 1200 mm beam illustrating CWX carrier roller anvils with special articulation on half- bearings to allow sideways movement

3-point bend jig, 500mm beam with CW type 'lower' anvil of milled edge radius 5mm 'Upper' O type anvil also of milled edge radius 5mm. Anvils width 420mm

3-point bend jig 1310 mm beam with handles, 'lower' AX v-notch rollers of diameters 10mm & 20mm. 'Upper' type OX v-notch roller of 20mm diameter.

3-point bend jig, 900 mm beam with CWN 'lower' anvils of dia. 30mm rolling to end-stop, 'upper' anvil OWX with articulated roller

Anvils

Type C anvil. Nickel-plated hardened steel, milled radius of 2 mm

Type C Nickel-plated hardened steel, milled radius of 5 mm for 4-point bend jig upper beam

Type AX v-notch lower anvil for interchangeable rollers of diameter 8 mm to 35 mm

Nickel-plated hardened steel diameter 30 mm rollers for v-notch anvils

Lower Type AX aluminium v-notch anvils with rollers of diameter 10 mm, 20 mm, and 30 mm

Lower anvil type CL, captive roller diameter 10 mm, height 150 mm

V-notch anvil type CX with roller diameter 50 mm

Lower anvil type CL, captive roller diameter 10 mm, height 200 mm

Articulated carrier anvils

Lower articulated carrier for removable inserts, aluminium to 50 kN

Upper articulated carrier for removable inserts,

Insert for articulated carrier, width 100 mm, available radii: 2; 5; 10; 15 and 20 mm

Articulated carrier with radius 5 mm insert

Rubber-faced sprung roller insert for articulated carrier, roller radius 30 mm, width 100 mm

V-notch upper anvil for interchangeable rollers available in aluminium or steel

Spring-retained roller on flat bed with end-stops. Type CWN

4-point bend fixtures

Upper beam to convert Mec22 3-point bend jig to 4-point bend

Anvil Support with integral roller, diameter 50 mm, width 50 mm

Upper v-notch carrier for interchangeable rollers for 4-point bending

Upper anvil, nickel-plated hardened steel, milled radius 5 mm

Upper beam hardened steel roller, radius 30 mm, width 100 mm, spring-retained on flat bed, recommended for glass testing

Upper anvil, milled radius 25 mm

Upper beam articulated anvil support.

Special accessories

For holder with large adapter size

V-notch adapters for smallest or largest-radius rollers

V-notch upper anvil for interchangeable rollers, diameters: 32, 36, 40, 50 and 60 mm

V-notch diameter reducer

T-nut for mounting anvils on beams, 10 mm x 40 mm

Bend jigs to your own specification

Bend jigs can be assembled to user specification to meet test requirements:

- load rating
- anvil edge type
- anvil height
- individual positioning of anvils, or by centric gearing using a leadscrew / handle.
- bending span width
- anvil movement type
- 3 or 4-point bend capability
- anvil mount type
- anvil width

Certain anvil types allow a rocking movement, adjustable angle (articulated), or flat sideways movement. For sharp angle bending (e.g. to 160°) long-fin anvils are available, along with other specialised anvils. Standard anvil types are shown below. (Roller size is denoted by diameter, milled edges are denoted by radius.)

Lower Anvils

Type A: dual-radius

A: milled edge

AX: v-notch roller bearings

Type C: single radius

C: milled edge

CX: v-notch roller

CL: captive roller

CM: roller free to traverse

Type CW, carrier style

CW: milled edge

CWX: v-notch roller

CWL: captive roller

CWN: roller traverses to stop

Upper Anvils

Type O

O: milled edge

OX: v-notch roller bearing

OWX: carrier-style v-notch

How to specify your particular bend jig requirement

Let us know your requirement by:

- beam model: Mec238, Mec103, Mec22 and length (long versions available)
- aluminium or steel, and finish (where available)
- anvil mount type as above (A, C, CW, O, with extra designation of W, X, L, M or N where appropriate)
- the upper and lower anvil radii type (milled or rollers) with dimensions
- any special requirements such as anvil height or width, or movement
- if you require centric gearing (Mec103 only)
- if you require an upper support for two anvils for 4-point testing
- the QC coupling size (20 mm or 32 mm)

For full details and examples, refer to the datasheets for the three base models: Mec238, Mec103 and Mec22.

For more information on QC fittings, refer to datasheet 431-354 Adapters for QC range of grips.

50 kN Bend Jig, QC fitting

Mec103 - steel

A 50 kN Bend Jig in steel having a bending span up to 120 mm and beam width of 50 mm.

A comprehensive selection of Mec103 anvil types and sizes are available to allow you to configure for 3-point or 4-point flexure bend testing.

'Upper' anvils and the 'lower' bending beam are supplied fitted with a bore hole to allow connection to either QC-20 or QC-32 fixing posts ... please specify which size when ordering. When used with the QC-20 fixing post, the maximum rated capacity is 25 kN.

Below you will see an example configuration showing:

- 'Lower' anvils Type A = nickel-plated 'dual radii' (3mm R3 and 5mm R5)
- 'Upper' anvil Type O having 3mm radius
- 'Lower' bending beam (B) of 220mm length with QC-20 bore hole

This generates a combined part number of : Mec103-AR3R5-OR3-B220-QC20

Dimensions mm

The illustrations overleaf are selected examples of the component parts and assemblies to build precisely the bending jig you require. You choose:

- Bending beam length (lower)
- Bending beam length (upper) ... only applicable if you wish to perform 4-point flexure bend testing
- 'Lower' and 'Upper' anvil type (roller or milled-edge) and their dimensions
- Special requirements (eg. Wide anvils for large specimens, tall anvils for folding tests, movement in anvils for increased accuracy)

Please refer to the outline at the back of this datasheet for how to identify and specify the components you require.

Mec103-cgr

Phosphate coated steel with centric gearing. Rotating the hand-wheel adjusts the position of the anvils symmetrically around the central point of the beam

Example configurations

3-point bend jig, 220 mm beam with centric gear, lower anvils with dual interchangeable O-ring retained rollers, diameters 3 mm and 5 mm; upper anvils of diameter 2 mm and 3 mm. Black (phosphate coated).

300 mm beam, with 80 mm tall 'lower' anvils having 50 mm diameter rollers, and 90mm tall 'upper' anvils (various radii) for 160° folding tests.

220 mm beam, black finish with centric gearing, 5 mm milled 'lower' anvils and 'upper' anvil radius 30 mm

Folding jig comprising 220 mm beam, black finish with centric gearing, 'lower' roller anvils of diameter 20mm & width 50mm Upper 'anvils' with fins radius 2 mm and 5 mm both having a height of 80 mm

Folding jig comprising 300mm beam, black finish 'Lower' roller anvils of diameter 50 mm with retaining sidebars for 180° folding tests

Rolling table

200 mm upper beam to convert to 4-point bend jig, 'upper' anvils having milled radius 5 mm

200 mm upper beam to convert to 4-point bend jig, anvils with 'articulated' inserts and interchangeable rollers, diameter 8 mm. Addition of articulated QC-20 adapter to allow movement during the test to maintain parallelism of specimen (for brittle materials eg ceramics)

Bending Beams

220 mm bending beam with QC-20mm bore hole

300 mm bending beam, black, with centric gearing, & QC-20mm bore hole

220 mm bending beam, black, with centric gearing & QC-20mm bore hole

220 mm upper bending beam for 4-point bending conversion, & QC-20mm bore hole

Lower anvils (pair)

Dual-radii 2 mm and 4 mm, milled hardened steel, black finish

Single milled radius 5 mm hardeMec103ned steel, black finish

V-notch to receive interchangeable rollers of diameters 3 mm to 15 mm, rollers are retained in position with O-rings,

Roller retaining sidebars – recommended for folding tests

Interchangeable rollers, diameter 10 mm, 6 mm and 4 mm

Rotating roller, diameter 10 mm, nickel-plated

Articulated carrier with insert for interchangeable roller of diameter 8 mm on flat-bed with end-stop. Allows movement of the roller along the 'flat-bed' during the test.

Upper anvils

Milled radius 2 mm, hardened steel & QC-20mm bore hole

V-notch to receive interchangeable roller, retained by O-rings.

QC-20mm bore hole

Milled radius 10 mm, hardened steel, height 80 mm.

QC-20mm bore hole

Milled radius 0.2 mm, hardened steel fin for folding tests.

QC-20mm bore hole

Milled Radius 50 mm, hardened steel

QC-20mm bore hole

Bend jigs to your own specification

Bend jigs can be assembled to user specification to meet test requirements:

- load rating
- anvil edge type
- anvil height
- individual positioning of anvils, or by centric gearing using a leadscrew / handle.
- bending span width
- anvil movement type
- 3 or 4-point bend capability
- anvil mount type
- anvil width

Certain anvil types allow a rocking movement, adjustable angle (articulated), or flat sideways movement. For sharp angle bending (e.g. to 160°) long-fin anvils are available, along with other specialised anvils. Standard anvil types are shown below. (Roller size is denoted by diameter, milled edges are denoted by radius.)

Lower Anvils

Type A: dual-radius

A: milled edge

AX: v-notch roller bearings

Type C: single radius

C: milled edge

CX: v-notch roller

CL: captive roller

CM: roller free to traverse

Type CW, carrier style

CW: milled edge

CWX: v-notch roller

CWL: captive roller

CWN: roller traverses to stop

Upper Anvils

Type O

O: milled edge

OX: v-notch roller bearing

OWX: carrier-style v-notch

How to specify your particular bend jig requirement

Let us know your requirement by:

- beam model: Mec238, Mec103, Mec22 and length (long versions available)
- aluminium or steel, and finish (where available)
- anvil mount type as above (A, C, CW, O, with extra designation of W, X, L, M or N where appropriate)
- the upper and lower anvil radii type (milled or rollers) with dimensions
- any special requirements such as anvil height or width, or movement
- if you require centric gearing (Mec103 only)
- if you require an upper support for two anvils for 4-point testing
- the QC coupling size (20 mm or 32 mm)

For full details and examples, refer to the datasheets for the three base models: Mec238, Mec103 and Mec22.

Perpex 45° Cone Probe with Extension Rod

Description

The perspex cone probe has a 45° angle, and is used for texture testing to assess characteristics such as hardness and spreadability.

Applications

Used to determine the firmness and spreadability properties of:

- food products
- cosmetics

Puncture Resistance Test Jig, QC fitting

MecS511

A puncture resistance fixture designed for tests based on European standard EN 14477: "Flexible packaging material—Determination of puncture resistance"; also known as the 'Parker Pen' or 'Parker Ball-Point' test.

The procedure is used to measure the resistance of flexible (including multilayer) packaging materials to penetration or puncture by sharp internal items or external objects. The peak force, energy, and elongation to break are determined.

A sample specimen of film is clamped in the lower fixture holder and is punctured from above by the 0.8 mm diameter probe.

| Item No: | MecS511 |
|----------------|---------|
| Rated capacity | 500 N |
| Body | Steel |

Scope of delivery: 1 test jig including both lower and upper fixtures each with a bore-hole to allow connection to QC-20 fixing posts.

Applications

Characterisation of flexible packaging films, laminates and other similar materials for slow-rate penetration resistance.

- Food packaging
- Medical instruments and sharps packaging
- Textiles with a high degree of elongation

Consult Mecmesin for test jigs to specifically conform to:

- ASTM F1306 Slow Rate Penetration Resistance of Flexible Barrier Films and Laminates
- ASTM D3787 Bursting Strength of Textiles—Constant-Rate-of-Traversal (CRT) Ball Burst Test.

50 kN Wood Shear Test Jig, QC fitting

Mec17 – steel

Description

A 50 kN Compressive Shear Jig designed for testing the shear strength in compression of adhesive bonds used for wood and similar materials. It facilitates testing to various international and industry standards such as ASTM-D905, ASTM-D143, DIN 52187, EN 392, ISO 6238 and UNE 56543:88.

It operates on the principle of the self-aligning upper 'shear blade' cutting the two blocks of material which have been bonded together. The two blocks are positioned in the lower fixture, which is secured to the base of a testing machine. The resistance of the adhesive to the cut is calculated by the software of the testing system as 'force required to shear divided by the bond area'.

Due to the size and weight of the Mec17 Shear Jig it is suitable primarily for use on twin-column test frames. The Mec17 is supplied fitted with a bore hole to allow connection to either QC-20 or QC-32 fixing posts—please specify which size when ordering. When used with the QC-20 fixing post, the maximum rated capacity is 25 kN.

Mec17

For more information on QC fittings, refer to datasheet 431-354
Adapters for QC range of grips.

Round Hooks

Description

Round hooks are general purpose, suitable for any sample with a loop, eyelet or similar feature. Often used with a digital force gauge to perform tensile tests on tension springs.

Applications

Used for general purpose tensile testing of:

- tension springs
- any sample with a loop or eyelet

Specifications

Swivel Test Hooks

Description

Swivel hooks are specifically designed to align samples when testing tension springs. They are usually used in conjunction with fixed test hooks.

Applications

Used for general purpose tensile testing of:

- tension springs

Extended Peg Hook (Bow Pull-off Test)

Description

The extended peg hook is used for securely attaching samples of decorations when carrying out test-to-failure tests on textiles and clothing adornments, for example a bow. Often used with the 25 mm / 50 mm 'grab test' textile fixture.

Applications

- bows and loops

Specifications

Adjustable Test Hook

Description

Used for securely holding smaller crimp terminals for tests to BSI spec. BS5G178 PART 1 and equivalent international standards.

Applications

Used for general purpose tensile testing of:

- crimp terminals

Clevis Grips

Description

Clevis grips feature a removable pin which can be inserted into the U-shaped clevis. The specimen is usually pre-conditioned with a hole or eyelet through which the clevis pin is passed to secure it in place. Models 432-400 and 432-443 have a clevis pin with quick-release detents to speed up inserting and removing the pin.

Applications

Used for testing heavy duty tension springs or for securing odd-shaped parts which have an eyelet.

Specifications

| Part No. | Load Capacity | | | Thread 1 | Width (B) | | Pin Diameter (ØD) | | | Length (C) | | Weight | |

Chain Link Assembly

Description

The chain link assembly is used for flexible alignment and connection of other accessories, in particular manual handling test applications. The 500 N capacity version is often used for ease of sample loading with lightweight vice grips, vice clamps and wedge grips.

Applications

Used for general purpose tensile testing of:

- manual handling

Eccentric Cam Grip, QC fitting

Eccentric Cam Grips – easy to use and self-tightening
Applicable for soft and flexible samples, foils, plastics, rubber, etc.

Mec7-1 Eccentric Cam Grip

- Tensile force: 1 kN
- Pyramid (serrated) faced roller, 25mm Ø
- Clamping width 50mm, specimen thickness 0 – 7 mm
- Body: aluminum anodized
- Weight: 509 gram
- Scope of delivery: 1 grip

Mec7-1-SR Eccentric Cam Grip

- Tensile force: 1 kN
- Smooth roller, 25mm Ø, rubber base plate
- Clamping width 50mm, specimen thickness 0 – 7 mm
- Body: aluminum anodized
- Weight: 509 gram
- Scope of delivery: 1 grip

Mec7-5 Eccentric Cam Grip

- Tensile force: 5 kN
- Pyramid (serrated) faced roller, 30mm Ø
- Clamping width 50mm, specimen thickness 0 – 7mm
- Body: aluminum anodized
- Weight: 667 gram
- Scope of delivery: 1 grip

Mec7-10 Eccentric Cam Grip

- Tensile force: 10 kN
- Pyramid (serrated) faced roller, 50mm Ø
- Clamping width 60mm, specimen thickness 0 – 8 mm
- Body: steel, manganese phosphate coating
- Weight: 3.35 Kg
- Scope of delivery: 1 grip

Dimensions mm (inch)

Cable Cam Grips

Description

Cable cam grips are designed for holding insulated cables and wire. The sample is secured by the cam, which self-tightens as load is applied and spreads the load evenly. Serrated or smooth cam. Supplied with socket-cap bolt for stand fixing.

Supplied individually.

Applications

Used for general purpose tensile testing of:

- crimped terminals
- tapes
- foils
- wires

Specifications

Double Cam Grip

Description

Double cam grips are designed for holding insulated cables and wire. The sample is secured by the cam, which self-tightens as load is applied, minimising slippage during testing.

Supplied individually.

Applications

Used for tensile testing of:

- crimp terminals
- wires

Specifications

Rotating Crimp Receptacle

Description

The rotating crimp receptacle is a versatile crimp termination holder that accommodates a wide range of terminals. The inner slotted ring rotates to adjust to fit 8 different-sized crimp terminals. used for BS SG 178-1 and equivalent international standard test methods.

Applications

Used for general purpose tensile testing of:

- crimp terminals
- welded or bonded connectors

Specifications

Wire/Filament Grips

Description

The wire/filament grip is equipped with a grooved capstan and precision-machined swivel plate, which are designed to ensure centre break within the sample and specimen alignment when force is applied.

Supplied individually.

Applications

Used for tensile testing of:

- thin wires
- cords
- filaments
- yarns

Large Circular Bollard Grip, QC fitting

Description

Large circular bollard grips are designed for testing flexible wire-type samples up to a maximum load of 2 kN. The sample is wrapped around the bollard and the free end is clamped tightly in place.

Supplied individually.

Applications

Used for tensile testing of:

- cord
- filaments
- wire
- yarn

Film Grips

Description

These grips are used for flexible samples such as films, where conventional grips create stress points so reducing tensile strength. Samples are wrapped around the drum, spreading the load and avoiding breakage. Grips are supplied in pairs.

Applications

- thin films
- polymers
- elastomers

Specifications

Spring-Loaded Fold Grip, QC fitting

Description

The spring-loaded fold grip is a self-tightening grip with a spring-loaded roller for holding flexible samples firmly as load is applied. Sample material is wound around the cross hatch knurl of the 10 mm (0.39") diameter roller and held in contact with the serrated rear body, preventing slippage within the grip.

Supplied individually.

Applications

Used for tensile testing of flexible materials:

- elastomers
- rubber
- films
- fabrics
- polymers
- leather

Small Circular Bollard Grip, QC fitting

Description

Small circular bollard grips are made from aluminium and are designed for testing delicate, flexible samples such as fine threads, wires and yarns, which may break easily when clamped. The maximum capacity is 100 N. The sample is wrapped around the bollard and the free end is held tightly in place using a pair of friction washers and a thumb-screw. The bollard has a single 5 mm (0.197") wide smooth groove to align the sample centrally and has a diameter of 20 mm (0.79") around which it can be wound.

Supplied individually.

Applications

Used for tensile testing of:

- fibres
- yarns
- filaments
- twines
- threads
- fine wires

Specifications

| Part No. | Load Capacity | | | Post Ø | Max. Load (to maintain tension) | Max. Diameter | | | Length | | Weight | |

Webbing Grip, QC fitting

Description

Webbing grips are easy to use and designed for rapid testing of high-strength belts and tapes. The sample is wound around the knurled roller and then around the smooth roller. As load is applied, the smooth roller moves in the slot to secure tightly against the knurled surface ensuring maximum gripping strength.

Supplied individually.

Applications

Used for tensile testing of:

- fabrics
- webbing
- textiles

Heavy-duty Belt Grips, QC fitting

Description

Heavy-duty belt grips are designed for testing high-strength belts and straps such as conveyor belts, which require specialised grips to prevent sample slippage. By winding the sample around the split bodies the stresses in the specimen are distributed. Self-tightening for effective tensile testing up to 10 kN. Grips are supplied in pairs.

Applications

Used for tensile testing of:

- conveyor belts
- plastic and metal strapping
- safety harnesses
- seat belts
- tapes

Specifications

| Part No. | Load Capacity | | Post Ø | Max. Sample Thickness | | Max. Specimen Width | | Length | | Weight | | |

Heavy-duty Textile Grips, QC fitting

Description

Heavy-duty textile grips are ideally suited to tension testing of fabrics, textiles and webbing. The grips are very easy to load, and the self-tightening action ensures that the sample does not slip. Grips are supplied in pairs.

Applications

Used for tensile testing of:

- fabrics
- webbing
- textiles

Specifications

Scissor Grips, QC fitting

Scissor Grips 5, 20 and 50 kN

Self-tightening and self-aligning grips

The initial gripping force to prevent the specimen from slipping when initially inserted is provided by spring tension. The ratio of clamping force to tensile force changes according to the opening width. The larger the opening width the stronger the grips tightens the specimen. The jaws then tighten themselves during force application to ensure the specimen can be pulled to break. Most commonly used for testing high-ductile plastics and elastomers.

Mec11-5 Scissor Grip (5 kN)

Ordering information

Mec11-5 grips are supplied individually, not as a pair. Mec11-5 grips are supplied with bore-hole to allow connection to QC-20 fixing post

| | |
|-----------------|-------------------------|
| • Item No. | Mec11-5 |
| • Tensile force | 5 kN |
| • Opening | 0 – 19 mm |
| • Sample width | 50 mm |
| • Body | Stainless steel |
| • Weight | 980 gram (without jaws) |

Jaws for Mec11-5: Scope of delivery 0.5 set = 2 jaws (left and right)

| Item number | Surface | Clamping surface H x W | Weight per 0.5 set |
|-------------|-------------------------|------------------------|--------------------|
| Mec11-5-B | Blank (smooth) jaws | 20x50 mm | 240 gram |
| Mec11-5-BP | Pyramid (serrated) jaws | 20x50 mm | 240 gram |

Other surfaces on request

Blank jaws (smooth)
- Suitable for own further treatments
- Steel blanks without coating

BP –multi-purpose application range
- Pyramid (serrated) jaws 1.2x45°
- Hardened steel 58HRC, nickel plated

Mec11-5 with Mec11-5-BP pyramid jaws

Mec11-20 Scissor Grip (20 kN)

With locking function (snap in): the grip locks in the opened position.
(Not functional when using round jaws type - BR)

Ordering information

Mec11-20 grips are supplied individually, not as a pair.

Mec11-20 grips are supplied with bore-hole to allow connection to QC-20 fixing post

| | |
|-----------------|---|
| • Item No. | Mec11-20 |
| • Tensile force | 20 kN |
| • Opening | Flat jaws 0 – 25 mm Round jaws 0 – 20 mm V-jaws for round specimen: 4 – 16 mm Ø |
| • Sample width | 50 mm and 100 mm |
| • Body | Stainless steel |
| • Weight | 2 kg (without jaws) |

Mec11-20 with Mec11-20-BW100 jaws

Mec11-20 with Mec11-20-BW100 jaws

Jaws for Mec11-20: Scope of delivery 0.5 set = 2 jaws (left and right)

| Item number | Surface | Clamping surface H x W | Weight per 0.5 set |
|------------------|-------------------------------|------------------------|--------------------|
| Mec11-20-B | Blank (smooth) jaws | 25x50 mm | 0.34 kg |

Pinch Grip (for testing bows, applique, patches)

Description

Pinch grips are lightweight miniature vice grips, which use a hinge action to close and separate the jaws. The sample is inserted, and a wing nut serves to tighten and release the jaws for tensile tests up to 200N.

Each jaw face is lightly serrated to hold the sample securely yet avoid inducing a break within the grip. Pinch grips are particularly well suited for peel testing of plastic films and other thin laminates or fabric clothing attachments.

The body of the grip has an M6 threaded hole. The grip is supplied with an M6 to 10-32 UNF adapter and grub screw (as shown) for connection to Mecmesin loadcells and test stands.

Supplied individually.

Applications

Used for peel and tensile testing of:

- thin film
- tissue
- woven yarn

Large Pinch Grip

Description

The large pinch grip has cross-hatched jaw faces to ensure samples are held securely for tensile tests. Fast installation and release of samples is achieved by initially grabbing by hinge action, and manually tightening the wing nut.

Supplied individually.

Applications

Used for tensile and heavy duty peel testing of:

- small components
- textile attachments
- welded tags
- paper and tissue strips

2 kN Pinch Grip, QC fitting

Description

A versatile and easy to use pinch grip suitable for small components, or where access space is limited yet tensile forces are significant. The 2 kN Pinch Grip is fitted with 25 mm high x 25mm wide pyramid jaw faces to ensure samples are held securely for tensile tests below 2 kN. One jaw is fixed and the other jaw is on a spring-loaded hinge which opens to 10 mm. Fast installation and release of samples is achieved by manually tightening the wing nut.

Fitted with a QC-15.9 mm hole and supplied with a male-to-female adaptor from QC-15.9 mm to QC-20 mm hole for connection to QC-20 posts on the base of a test stand or loadcell. Supplied individually.

Applications

Used for tensile and heavy-duty peel testing of:

- small engineering components
- electronic components
- textile attachments
- welded tags
- adhesive tapes and laminate coatings

| | |
|-------------------|---|
| Item number: | MecS470 |
| Tensile force: | 2 kN |
| Fixing hole: | Af15.9 |
| Opening: | 0 – 10 mm |
| Jaws: | Pyramid (serrated) jaws, pyramids 1.2 x 45° |
| Clamping surface: | 25 x 25 mm (HxW) |
| Body: | Steel, nickel-plated, hardened steel |
| Weight: | 462 g per grip 188 g per adapter |
| Scope of delivery | 1 grip |

20 N Spring-loaded Pinch Grip with chain link, QC fitting

Pinch Grip (spring-loaded)

A small spring-loaded Pinch Grip ideal for low-force tension tests below 20 N.

Light-weight, versatile and easy to use. Suitable for pull-off and tear tests of components, peel testing of adhesive bonds plus testing the separation force of welded joints (e.g. plastic, paper & rubber). The flexible chain-link connection allows easy access to components in limited spaces and ensures self-alignment during testing.

MecS205k: Supplied as standard with chain and adapter to allow connection to QC-20 fixing post

MecS205k Spring-loaded Pinch Grip (20 N)

| | |
|--------------------------|--|
| • Item No. | MecS205k |
| • Tensile force | 20 N |
| • Opening | 0 – 3.4 mm |
| • Jaws | Smooth (blank) jaws |
| • Clamping surface H x W | 10 x 10 mm |
| • Body | Aluminium, anodized |
| • Weight | 98 gram |
| • Scope of delivery | MecS205k: 1 pinch grip incl. chain and adapter |

Lightweight Mini Vice Grip

Description

Lightweight mini vice grips are ideal for testing extremely low forces by virtue of their spring-loaded clamping action. Samples are held without the need to tighten a thread which may damage very light loadcells or the sample itself. Supplied with a chain link for ease of alignment.

Supplied individually.

Applications

Used for tensile and low-force peel testing of:

- thin films
- delicate fine wire
- sub-miniature components
- tissue and cotton yarns

Specifications

Spring-action Vice Clamp

Description

Spring-action vice clamps are lightweight clamps designed for gripping film, paper, labels, tape and other thin materials for tensile and peel testing. Ideal for testing at low forces, the clamps are fitted with adjustable serrated interlocking jaws. Often used with the chain link assembly for ease of sample loading and for alignment.

Supplied individually.

Applications

Used for tensile and peel testing of:

- films
- rubber
- flexible sheet materials
- woven fabrics
- paper
- tissue
- laminates
- tape
- textiles

Small Single-action Vice Grip, QC fitting

Description

Small single-action vice grips are ideal for testing low force applications on flat specimens. These general purpose side loading vice grips are fitted with 30 mm x 30 mm (1.2" x 1.2") flat faced jaws.

Supplied individually.

Applications

Used for tensile and peel testing of:

- films
- rubber
- flexible sheet materials
- woven fabrics
- tape
- paper
- tissue
- laminates
- textiles

Specifications

Medium Single-action Vice Grip, QC fitting

Mec240k - 2.5 kN

Mec240k-S20 - 2 kN

Mec240k-S30 - 1 kN

Mec240k-S50 - 1 kN

Mechanical Vice Grips apply a clamping force by manually tightening parallel jaw faces directly onto the specimen. Single-action vice grips allow one jaw to be set in position to align the specimen around the central axis and the other jaw to be freely adjustable to clamp it in place. Consequently they are best suited for tensile testing of symmetrical specimens which do not vary greatly in thickness.

The Mec240k Medium Vice Grips are rated between 1 – 2.5 kN and available in 4 sizes with jaw openings ranging from 0-10mm right up to 0-50mm depending on the jaw types selected. An extensive collection of interchangeable, high-performance jaws with differing surface profiles provide excellent gripping characteristics to ensure that a variety of materials and components can be securely held.

Ideal for tension tests below 2.5kN on flat strips of metal and plastic, thin sheets and tapes plus non-woven and general fabrics.

| Item No: | Mec240k | Mec240k-S20 | Mec240k-S30 | Mec240k-S50 |
|---------------------------------|---------|-------------|-------------|-------------|
| Rated capacity: | 2.5 kN | 2 kN | 1 kN | 1 kN |
| Opening (depending on jaws): | 0-10 mm | 0-20 mm | 0 – 30 mm | 0-52 mm |
| Weight each grip(without jaws): | 0.27 kg | 0.32kg | 0.33 kg | 0.49 kg |

Scope of delivery: 1 grip supplied fitted with bore-hole to allow connection to QC-20 fixing post

Note: Jaws (see table below) must be ordered separately.

Scope of delivery 0.5 set = 2 jaws (left & right). Order any combination of 2 half-sets of jaws to fit into a pair of any Mec240k Medium Vice grips (upper & lower)

| Item no. | Surface | Clamping surface H x W | Opening for Mec240k | Opening for Mec240k-S20 | Opening for Mec240k-S30 | Opening for Mec240k-S50 | Weight per 0.5 set |

Large Single-action Vice Grips, QC fitting

Description

Large single-action vice grips are suitable for tensile testing a wide range of samples. Available fitted with one of three different types of jaw face: pyramid-faced, rubber-coated and wave-form, to securely grip most materials.

Supplied individually.

Applications

Used for tensile testing of:

- metallic foils
- textiles
- paper and card
- woven fabrics
- plastic sheet
- tapes

Specifications

| Part No. | Load Capacity | | | Post Ø | Jaw Type | Jaw Opening (A) | | Jaw Width | | Height | | Weight | |

Heavy-duty Single-action Vice Grip, QC fitting

Mec154 - 10kN – aluminium, Mec154 - 20kN – steel

Mec154-10
Mec154-20

Mechanical Vice Grips apply a clamping force by manually tightening parallel jaw faces directly onto the specimen. Single-action vice grips allow one jaw to be set in position to align the specimen around the central axis and the other jaw to be freely adjustable to clamp it in place. Consequently they are best suited for tensile testing of symmetrical specimens which do not vary greatly in thickness.

The Mec154 Heavy-duty Vice Grips are rated to either 10 kN (aluminium body) or 20 kN (steel body) and available in with jaw openings ranging from up to 0-34 mm depending on the jaw types selected. An extensive collection of interchangeable, high-performance jaws with differing surface profiles provide excellent gripping characteristics to ensure that a variety of materials and components can be securely held.

Ideal for tension tests below 20 kN on a range of materials including flat strips of metal, rigid plastics, plus non-woven and general fabrics.

Scope of delivery: 1 grip supplied fitted with bore-hole to allow connection to QC-20 fixing post

| Item No: | Mec154-10 | Mec154-20 |
|----------------------------------|-----------|-----------|
| Rated capacity: | 10 kN | 20 kN |
| Opening (depending on jaws): | 0-32 mm | 0-32 mm |
| Weight each grip (without jaws): | 2.36 kg | 5 kg |

Note: Jaws (see table below) must be ordered separately.

Jaws for Mec154: Scope of delivery 0.5 set = 2 jaws (left & right). Order any combination of 2 half-sets of jaws to fit into a pair of any Mec154 Heavy-duty Vice grips (upper & lower)

| Item No. | Surface | Clamping surface H x W | Opening | Weight per 0.5 set |
|--------------|------------------|------------------------|-------------|--------------------|
| Mec154-B | Blank jaws | 40 x 60 mm | 0 – 32 mm | 0.35 kg |
| Mec154-BG | Rubber jaws | 40 x 60 mm | 0 – 30 mm | 0.36 kg |
| Mec154-BP | Pyramid jaws | 40 x 60 mm | 0 – 32 mm | 0.33 kg |
| Mec154-BV4* | V-jaws | Clamping height 40 mm | 4 – 32 mm Ø | 0.35 kg |
| Mec154-BV6* | V-jaws | Clamping height 40 mm | 6 – 32 mm Ø | 0.32 kg |
| Mec154-BW | Wave jaws | 40 x 60 mm | 0 – 32 mm | 0.32 kg |
| Mec154-BD | Diamond jaws | 40 x 60 mm | 0 – 32 mm | 0.35 kg |
| Mec154-BWC | Jaws for bitumen | 40 x 60 mm | 0 – 14 mm | 0.63 kg |
| Mec154-B100 | Blank jaws | 40 x 100 mm | 0 – 28 mm | 0.72 kg |
| Mec154-BG100 | Rubber jaws | 40 x 100 mm | 0 – 26 mm | 0.74 kg |
| Mec154-BP100 | Pyramid jaws | 40 x 100 mm | 0 – 28 mm | 0.69 kg |
| Mec154-BW100 | Wave jaws | 40 x 100 mm | 0 – 28 mm | 0.66 kg |
| Mec154-BD100 | Diamond jaws | 40 x 100 mm | 0 – 28 mm | 0.72 kg |
| Mec154-BW200 | Wave jaws | 60 x 200 mm | 0 – 20 mm | 3.00 kg |

*We recommend BV6 jaws for samples with a larger diameter

Blank jaws
• Suitable for own further treatments
• Steel blanks without coating

Rubber jaws
• 1 mm rubber coating (NBR)
• Nickel-plated

Pyramid jaws
• Pyramids 1.2x45°
• Hardened steel 58HRC
• Nickel-plated

V-jaws
• For all kinds of round samples
• Tooth pitch 1.2 mm
• Hardened steel 58HRC, nickel-plated

Wave jaws
• For flexible materials
• Wave 5 mm
• Hardened steel 58HRC, nickel-plated

Diamond jaws
• Covered with synthetic diamonds
• Nickel-plated

Mec154-BG 100 40x100 mm
rubber-coated

Mec154-BW 40x60 mm
wave form

2.5 kN Thin Wire Grip, QC fitting

Mec9

The Mec9 'Thin Wire grip' is designed for holding fine wires, thin ropes and narrow bands which have a tendency to slip under load. The specimen is wrapped around the lower bollard to provide more contact area thereby increasing clamping friction. The specimen is then passed through the screw-action jaws before being tightened in place - care should be taken to avoid excessive tightening which may induce specimen break.

The Mec9-Ko version operates in the same way except tightening occurs via the pneumatic cylinders. These can be controlled to apply a suitable constant pressure thus minimising the risk of inducing specimen break at the jaws.

| | |
|----------------------------|---|
| Item no.: | Mec9 |
| Max. load: | 2.5 kN |
| Body: | Aluminum, anodized |
| Weight per grip with jaws: | 380 gram |
| Scope of delivery: | 1 piece includes Mec9-GT carrier for inset jaws. Inset jaws must be ordered separately |

Inset jaws for Mec9:

For a quick change of inset jaws, a carrier is provided as standard (Mec9-GT). Scope of delivery: 0.5 set

| Item No. | Surface | Clamping surface (H x W) | Opening | Weight per 0.5 set |
|----------|---------------------------|--------------------------|----------|--------------------|
| Mec9-EB | Blank inset jaws | 37x15 mm | 0 - 5 mm | 26 g |
| Mec9-EBD | Diamond-coated inset jaws | 37x15 mm | 0 - 5 mm | 26 g |

Jaws faces with other dimensions and surface coatings are available on request

Fabric Grips

Description

Fabric grips are designed for tensile and elongation testing of fabric to a number of international strength standards. Two locking nuts at either side of the grip ensure the sample is clamped securely across its entire width during testing.

Supplied individually.

Applications

Used for tensile testing of:

- fabric
- textiles

Specifications

| Part No. | Load Capacity | | | Thread 1 | Clamp Capacity | | Max. Sample Width (A) | | Length (C) | | Weight | |

Large Double-action Vice Grip, QC fitting

Description

The large double-action vice grip is rated to 5 kN and can grip specimens with a thickness from 0.5 mm to 25 mm. It has a tommy-bar handle on one side for rapid tightening and a fine-action thumb-screw on the other for accurate sample positioning. An engraved millimetre scale on one jaw can be used to align the sample accurately.

Supplied individually.

Applications

Used for testing of:

- textiles
- leather
- plastics
- paper and cards
- thick films
- thin metal sheets

Specifications

| Part No. | Load Capacity | | Post Ø | Jaw Opening | | Jaw Width | | Height | | Weight | | |
|----------|---------------|---------|----------|-------------|-------|-----------|-------|--------|-------|--------|--------|--------|
| 432-433 | 5 kN | 500 kgf | 1100 lbf | QC20 | 25 mm | 0.98" | 50 mm | 1.97" | 92 mm | 3.62" | 2.8 kg | 6.2 lb |

U-Form Vice Grip, Double-action, 5 kN - Aluminium, QC fitting

Mec240g

Shown fitted with a half-set of Mec240g-BW wave jaws

Mec240g-S50

Shown fitted with a half-set of Mec240g-BG80 rubber jaws

Mec240g-100

Shown fitted with a half-set of Mec240g-BD80 diamond jaws.

Mechanical Vice Grips apply a clamping force by manually tightening parallel jaw faces directly onto the specimen. Double-action vice grips allow free adjustment of both jaws, allowing them to be aligned around the central axis to accommodate tensile testing of both symmetrical and asymmetrical specimens. The 'U-Form' cut into the aluminium body of these Pneumatic Vice Grips creates the space for an operator to have specimen material below the jaws thereby facilitating loading and removal when testing.

The Mec240g U-form Vice Grips are rated to 5 kN and available in 3 sizes with jaw openings ranging from 0-28 mm, 0-50 mm and 0-106 mm depending on the jaw types selected. An extensive collection of interchangeable, high-performance jaws with differing surface profiles provide excellent gripping characteristics to ensure that a variety of materials and components can be securely held.

Ideal for tension tests on flat strips of metal and plastic, thin sheets and tapes plus non-woven and general fabrics.

Scope of delivery: 1 grip supplied fitted with bore-hole to allow connection to QC-20 fixing post

| Item No: | Mec240g | Mec240g-S50 | Mec240g-S50 |
|---------------------------------|---------|-------------|-------------|

Parallel Jaw Grips

Description

Parallel jaw grips are designed for gripping film, rubber, tape and other materials for general tensile and peel testing up to 500 N. Fitted with individually adjustable serrated interlocking jaws, they grip samples effectively, up to 6 mm (0.24") thick.

Supplied individually.

Applications

Used for tensile and peel testing of:

- films
- rubber
- flexible sheet materials
- tape
- textiles
- laminates
- woven fabrics
- paper and card

Small Parallel Grips

Description

The small parallel grip has a rigid body with individually controlled serrated jaws. A floating ball screw attachment ensures central loading with correct alignment during tensile testing, and wing screws are used to easily adjust grip faces.

Supplied individually.

Applications

Used for tensile and peel testing of:

- flexible sheet materials
- textiles
- tape
- laminates
- paper

Specifications

Lightweight Double-action Vice Grip

Mec227 Double-action Vice Grip – aluminium

A compact lightweight vice grip suitable for holding thin strips of material (e.g. Paper and plastic films) where the tensile force is less than 100 N. The double-action screw-driven rods allow symmetrical and asymmetrical specimens to be positioned and clamped in place. Its low-profile aluminium design makes it ideal for tensile testing with loadcells of capacity as low as 5 N.

When combined with a flexible chain-link assembly (432-259) it is impeccably suited to low force peel testing applications where the specimen can be inserted separately without risk of overloading the loadcell when tightening the jaws.

Mec227 grip shown with Mec227-BG25 rubber jaws fitted

Scope of delivery: 1 grip fitted with 10/32UNF threaded hole

| Item No: | Mec227 |
|--------------------|------------------------------|
| Max tensile force: | 100 N |
| Opening (A): | 0 - 8 mm (depending on jaws) |
| Weight: | 60 g per grip (without jaws) |

Mec227-S46 Double-action Vice Grip – aluminium

A larger version of the Mec227 vice grip with an opening of 0 - 46 mm (without jaws) suitable for holding specimens which may have a thick substrate with a thin strip of bonded material (e.g. Paper and plastic films) where the tensile force is less than 100 N.

Mec227-S46

Scope of delivery: 1 grip fitted with 10/32UNF threaded hole

| Item No: | Mec227-46 |
|--------------------|-------------------------------|
| Max tensile force: | 100 N |
| Opening (A): | 0 - 46 mm (depending on jaws) |
| Weight: | 105 g per grip (without jaws) |

Jaws for Mec227: Scope of delivery 0.5 set = 2 jaws (left & right)

| Item number | Surface | Clamping surface H x W | Opening (A) | Weight / per 0.5 set |
|----------------|--------------|------------------------|-------------|----------------------|
| Mec227-B25 | Blank jaws | 10 x 25 mm | 0 - 8 mm | 18 gram |
| Mec227-BG25 | Rubber jaws | 10 x 25 mm | 0 - 6 mm | 19 gram |

Toggle Clamps

Description

Toggle clamps are fitted with a lever to allow rapid, easy loading of specimens. They are available fitted with either flat or serrated jaw faces to securely grip most materials.

Supplied individually.

Applications

Used for testing of:

- fabric
- woven fabrics
- tapes
- polymers

2.5 kN U-Form Pneumatic Vice Grip, single actuator, QC fitting

Mec240g + Ko (single-actuator) – aluminium

Mec240g + 2Ko (dual-actuator) – aluminium

A highly versatile pneumatic grip for use in applications where material is sensitive to damage or slippage when clamped and the tensile force is significant.

- The Mec240g+Ko features an adjustable screw-driven rod allowing symmetrical and asymmetrical specimens to be positioned whilst the single-actuator applies the clamping force on the jaws.
- The Mec240g+2Ko features a dual actuator so the jaws always close symmetrically around the centre line. This removes the need to adjust the jaw position according to the specimen thickness; a great time-saver especially when testing soft specimens.

Adjustment of pneumatic pressure ensures a constant and reproducible clamping force is achieved to avoid 'jaw break' or slippage of specimens. Typically 7 bar pressure provides 2.6 kN clamping force on the specimen.

The 'U-Form' cut into the aluminium body of these Pneumatic Vice Grips creates the space for an operator to have specimen material below the jaws thereby facilitating loading and removal. An extensive collection of interchangeable, high-performance jaws with differing profiles provide excellent holding characteristics when tensile testing a variety of plastic, metal and textile materials.

Mec240g + Ko shown fitted with a half-set of Mec240g-BG rubber jaws'

Mec 240g + 2Ko shown fitted with a half-set of Mec240g-BV2 V-jaws

Scope of delivery: 1 pair of grips supplied fitted with bore-hole to allow connection to QC-20 fixing post.

| Item No: | Mec240g + Ko | Mec240g + 2Ko |
|---------------------------------|--|----------------|
| Rated capacity: | 2.6 kN / 7 bar | 2.6 kN / 7 bar |
| Opening (depending on jaws): | 0-18 mm | 0-18 mm |
| Weight each grip(without jaws): | 1.55 kg | 1.93 kg |
| Pneumatic connection: | 1/8" – fits to tubes supplied with foot pedals (eg Mec205-1) | |

Note: Foot pedals (see overleaf) and jaws (see table below) must be ordered separately.

Jaws for Mec240g+Ko and Mec240g+2Ko: Scope of delivery 0.5 set = 2 jaws (left & right).
Order any combination of 2 half-sets of jaws to fit into a pair of 'Mec240g + Ko' or 'Mec240g + 2Ko' grips (upper & lower)

| Item no. | Surface | Clamping surface H x W | Jaw opening with rod L56.5 | Jaw opening with rod L51.5* | Weight per 0.5 set |
|---------------|--------------|---------------------------|-------------------------------|--------------------------------|-----------------------|
| Mec240g-B | Blank jaws | 30x50 mm | 0 - 18 mm | 10 - 28 mm | 0.22 kg |
| Mec240g-BG | Rubber jaws | 30x50 mm | 0 - 16 mm | 8 - 26 mm | 0.22 kg |

| Mec240g-B100 | Blank jaws | 30x100 mm | 0 - 20 mm | 10 - 28 mm | 0.46 kg |
| Mec240g-BG100 | Rubber jaws | 30x100 mm | 0 - 18 mm | 8 - 26 mm | 0.47 kg |
| Mec240g-BP100 | Pyramid jaws | 30x100 mm | 0 - 20 mm | 10 - 28 mm | 0.44 kg |
| Mec240g-BW100 | Wave jaws | 30x100 mm | 0 - 20 mm | 10 - 28 mm | 0.42 kg |
| Mec240g-BD100 | Diamond jaws | 30x100 mm | 0 - 20 mm | 10 - 28 mm | 0.46 kg |

* Not supplied as standard. Order L51.5 rod separately.

Blank jaws

- Applicable for own further treatments
- Steel blanks without coating

Rubber jaws

- 1 mm rubber coating (NBR)
- Nickel-plated

Pyramid jaws

- Pyramids 1.2x45°
- Hardened steel 58 HRC
- Nickel-plated

V-jaws

- For all kinds of round samples
- Tooth pitch 1 mm (BV5) or 0,8 mm (BV2)
- Hardened steel 58HRC
- Nickel-plated

Wave jaws

- For flexible materials
- Wave 5 mm
- Hardened steel 58HRC
- Nickel-plated

Diamond jaws

- Clamping surface coated with synthetic diamonds
- Nickel-plated

Mec240g-BV2

Mec240g-BV5

BV5 jaws fit well for samples with larger diameters

Accessories

Mec205-1 Foot pedals

Non-locking: The jaws of the grip open by pressing the foot pedal and close after removing the foot from the pedal. Scope of delivery: 1 pair of foot switches including tubes and fittings.

Mec205-2 Foot pedals

With locking function: The jaws of the grip open by pressing the foot pedal and remain opened after removing the foot from the pedal. The jaws close by pressing the pedal one more time. Scope of delivery: 1 pair of foot switches including tubes and fittings.

Mec205-.+PR Pressure regulator

Optional for Mec205-1 or Mec205-2 To adjust air pressure: 1-10 bar or 1-16 bar

Mec205-3 Hand switches

With locking function: The jaws of the grip close by pulling the handle and remain closed. The jaws open by pushing the handle back. Scope of delivery: 1 unit of hand switches including tubes and fittings.

Mec216 Compressor for laboratories, oil-lubricated

Max pressure 16 bar, 230 V, frequency 50 Hz, noise level: 38 dB (A)/1 m. Displacement 5 l/min, tank size 3.1 l (0.82 gallon) Dimensions: 382x300x334 mm (D x W x H); weight 24 kg Different voltages available on request.

For more information on QC fittings, refer to datasheet 431-354
Adapters for QC range of grips.

Large Pneumatic Plane Grip, QC fitting

Description

Large pneumatic plane grips have pyramidal-faced jaws and use a pneumatically-operated parallel vice action to firmly hold flat samples in place. Designed for fast loading and rapid testing of a large number of specimens. Supplied in pairs complete with 3 m long tube and footswitch for convenient operation. Recommended air pressure 6 bar (maximum 8 bar)

Applications

Used for tensile testing of:

- plastics
- textiles
- heavy-duty film
- light metals / alloys
- laminates
- paper and card
- rubber
- insulating materials

Specifications

| Part No. | Load Capacity | | Post Ø | Jaw Opening | | Jaw Width | | Height | | Weight | | |

5 kN U-Form Pneumatic Vice Grip, single actuator, QC fitting

Mec83 (single-actuator) – aluminium

A highly versatile pneumatic grip for use in applications where material is sensitive to damage or slippage when clamped and the tensile force is significant.

- The Mec83 features an adjustable screw-driven rod allowing symmetrical and asymmetrical specimens to be positioned whilst the single-actuator applies the clamping force on the jaws.
- The standard rods allow a jaw opening of 0-10 mm. Additional rods are supplied which, when fitted, allow jaw openings of 10-20 mm and 20-30 mm. This is useful for thicker specimens which do not reduce in thickness by more than 10 mm when pulled.

Adjustment of pneumatic pressure ensures a constant and reproducible clamping force is achieved to avoid 'jaw break' or slippage of specimens. Typically 7 bar pressure provides 3.5 kN clamping force on the specimen.

The 'U-Form' cut into the aluminium body of these Pneumatic Vice Grips creates the space for an operator to have specimen material below the jaws thereby facilitating loading and removal. An extensive collection of interchangeable, high-performance jaws with differing profiles provide excellent holding characteristics when tensile testing a variety of plastic, metal and textile materials.

Mec83 shown fitted with a half-set of Mec83 pyramid jaws'

Scope of delivery: 1 pair of grips supplied fitted with bore-hole to allow connection to QC-20 fixing post.

| Item No: | Mec83 | |
|---------------------------------|--|---|
| Rated capacity: | 3.5 kN / 7 bar | max. 16 bar |
| Opening (depending on jaws): | 0-10 mm standard | 10-20 mm and 20-30 mm when fitted with alternative rods (also supplied) |
| Weight each grip(without jaws): | 3.2 kg | |
| Pneumatic connection: | 1/8" – fits to tubes supplied with foot pedals (eg Mec205-1) | |

Note: Foot pedals (see below) and jaws (see table below) must be ordered separately.

Jaws for Mec83: Scope of delivery 0.5 set = 2 jaws (left & right).

Order any combination of 2 half-sets of jaws to fit into a pair of 'Mec83' grips (upper & lower)

| Item number | Jaw Surface | Clamping surface H x W | Jaw opening with rod L40* | Jaw opening with rod L35* | Jaw opening with rod L30* | Weight/ 0.5 pair |

Foot Switches & Hand Switches for Pneumatic Grips

Mec205 range

Pneumatic grips are the ideal choice when performing tensile tests on sensitive materials which have the tendency to slip or break at the point of clamping.

To operate such pneumatic grips there are a number of choices available depending on your preference.

The Mec205-1 (non-locking) and Mec205-2 (locking) are Foot Switches whereby the pedal is pressed to open/close the jaws of the pneumatic grip. Often chosen for convenience to situate beneath the desk and keep both hands free for inserting and removing the specimen from the grips. A pressure regulator is also available for fitting to the Foot Switch so that you can adjust between 1 – 10 bar for fine-tuning the clamping force applied to the specimen via the pneumatic grip.

The Mec205-3 is a Hand Switch for positioning on the table top next to the tester, whereby the lever handles are moved to the open and closed positions to control the jaws of the pneumatic grip.

Scope of delivery: All 3 switch types are supplied with tubes and fittings for connection to your compressed air supply.

Mec205-1 non-locking Foot Switch shown with tubes and fitting

Mec205-1 Foot switches

Non-locking: The jaws of the grip open by pressing the foot pedal and close after removing the foot from the pedal. Only for single action rods with spring inside. Max. pressure 10 bar.

Scope of delivery: 1 pair of foot switches including tubes and fittings

Mec205-2 Foot switches

Withlocking function: The jaws of the grip open by pressing the foot pedal and remain opened after removing the foot from the pedal. The jaws close by pressing the pedal one more time. Only for single action rods with spring inside. Max. pressure 10 bar.

Scope of delivery: 1 pair of foot switches including tubes and fittings

Mec205-PR10bar Pressure regulator

Optional for all versions.

To adjust air pressure:1-10 bar

Mec205-3 Hand switches

1 unit of pneumatic hand switches, tubes and fittings

With locking function

Only for single action rods with spring inside. Max. pressure 16 bar.

Scope of delivery: 1 unit of hand switches including tubes and fittings

Lightweight Pneumatic Plane Grip, Single actuator, QC fitting

Mec94 – aluminium

A versatile lightweight pneumatic grip especially suitable for holding a variety of materials where the tensile force may be low but the material is sensitive to damage or slippage when clamped. The adjustable screw-driven rod allows symmetrical and asymmetrical specimens to be positioned whilst the single-actuator applies the clamping force on the jaws. Adjustment of pneumatic pressure ensures a constant and reproducible clamping force is achieved to avoid 'jaw break' or slippage of specimens. Its low-profile aluminium design makes it ideal for tensile testing with loadcells of capacity as low as 10 N.

- Clamping force: 200 N / 7 bar
- Opening: 0-20 mm (depending on jaws)
- Pneumatic connection: M5 suitable for fitting with tubes supplied with additional foot pedal (eg. Mec205-1)
- Weight: 214 gram each grip (without jaws)

Jaws for Mec94: Scope of delivery 0.5 set = 2 jaws (left & right).
Order any combination of 2 half-sets of jaws to fit into a pair of Mec94 grips (upper & lower)

| Item No. | Surface | Clamping Surface H x W | Opening (A) | Weight per 0.5 set |
|------------|--------------|------------------------|-------------|--------------------|
| Mec94-B | Blank jaws | 25 x 25 mm | 0 - 20 mm | 53 gram |
| Mec94-BG | Rubber jaws | 25 x 25 mm | 0 - 18 mm | 56 gram |
| Mec94-BP | Pyramid jaws | 25 x 25 mm | 0 - 20 mm | 49 gram |
| Mec94-BD | Diamond jaws | 25 x 25 mm | 0 - 20 mm | 54 gram |
| Mec94-B50 | Blank jaws | 25 x 50 mm | 0 - 20 mm | 111 gram |
| Mec94-BG50 | Rubber jaws | 25 x 50 mm | 0 - 18 mm | 114 gram |
| Mec94-BP50 | Pyramid jaws | 25 x 50 mm | 0 - 20 mm | 104 gram |
| Mec94-BW50 | Wave jaws | 25 x 50 mm | 0 - 16 mm | 128 gram |
| Mec94-BD50 | Diamond jaws | 25 x 50 mm | 0 - 20 mm | 112 gram |

Jaws with other dimensions and surface coatings on request

*Q = Quick-interchange via 8 mm Ø pin

Mec94 shown with Mec94-B jaws fitted

Ordering information Item No.: Mec94

Scope of delivery: 1 pair of grips supplied with adaptors to allow connection to QC-20 fixing posts.

Foot pedals (see overleaf) and jaws (see table below) must be ordered separately.

| Item No: | Mec94 |
|-----------------------|---|
| Clamping force: | 200N / 7 bar |
| Opening: | 0-20mm (depending on jaws) |
| Pneumatic connection: | M5 – fits to tubes supplied with foot pedals (eg Mec 205-1) |
| Weight: | 214 g per grip (without jaws) |

Blank jaws

- Steel blanks
- Applicable for own further treatments

Rubber jaws

- 1 mm rubber coating

Pyramid jaws

- Pyramids 1x45°
- Hardened steel 58 HRC

Wave jaws

- Wave 5 mm
- Hardened steel 58 HRC

Diamond jaws

- Coated with synthetic diamonds

Examples for Mec94 with jaws fitted

Mec94 with Mec94-BW50 jaws

Mec94- with Mec94-BP50 jaws

Mec94 with Mec94-B100x25 special blank jaws

Accessories

Mec205-1 Foot pedals

Non-locking: The jaws of the grip open by pressing the foot pedal and close after removing the foot from the pedal. Scope of delivery: 1 pair of foot switches including tubes and fittings.

Mec205-2 Foot pedals

With locking function: The jaws of the grip open by pressing the foot pedal and remain opened after removing the foot from the pedal. The jaws close by pressing the pedal one more time. Scope of delivery: 1 pair of foot switches including tubes and fittings.

Mec205-+PR Pressure regulator

Optional for Mec205-1 or Mec205-2 To adjust air pressure: 1-10 bar or 1-16 bar

Mec205-3 Hand switches

With locking function: The jaws of the grip close by pulling the handle and remain closed. The jaws open by pushing the handle back. Scope of delivery: 1 unit of hand switches including tubes and fittings.

Mec216 Compressor for laboratories, oil-lubricated

Max pressure 16 bar, 230 V, frequency 50 Hz, noise level: 38 dB (A)/1 m. Displacement 5 l/min, tank size 3.1 l (0.82 gallon) Dimensions: 382x300x334 mm (D x W x H); weight 24 kg Different voltages available on request.

For more information on QC fittings, refer to datasheet 431-354 Adapters for QC range of grips.

Small Pneumatic Plane Grip, Single actuator, QC fitting

Description

Small pneumatic plane grips are made from aluminium, have rubber-faced jaws and use a pneumatically-operated parallel vice action to firmly hold flat samples in place. Designed for fast loading and rapid testing of a large number of specimens. Supplied in pairs complete with 3 m long tube and footswitch for convenient operation. Recommended air pressure 6 bar (maximum 8 bar).

Applications

Used for tensile testing of:

- film
- laminates
- plastic sheet
- textiles
- woven fibre strips
- rubber
- elastomers
- paper

Specifications

'Universal' Pneumatic Vice Grip, Single & dual actuators, QC fitting

Mec240k + Ko (single-actuator) – aluminium

Mec240k + 2Ko (dual-actuator) – aluminium

The most versatile and flexible model of pneumatic grip for use in applications where material is sensitive to damage or slippage when clamped and the tensile force is significant. The Mec240k range has various options available with differing jaw-openings from 0-10mm through to 0-50mm specifically designed to meet the size of specimen you need to test.

- The Mec240k+Ko models feature an adjustable screw-driven rod allowing symmetrical and asymmetrical specimens to be positioned whilst the single-actuator applies the clamping force on the jaws.
- The Mec240k+2Ko models feature a dual actuator so the jaws always close symmetrically around the centre line. This removes the need to adjust the jaw position according to the specimen thickness; a great time-saver especially when testing soft specimens.

Adjustment of pneumatic pressure ensures a constant and reproducible clamping force is achieved to avoid 'jaw break' or slippage of specimens. Typically 7 bar pressure provides 1.2 kN clamping force on the specimen.

An extensive collection of interchangeable, high-performance jaws with differing profiles provide excellent holding characteristics when tensile testing a variety of plastic, metal and textile materials.

Mec240k + Ko shown fitted with a half-set of Mec240k- BV2 V-jaws

Mec240k-S30 + 2Ko shown fitted with a half set of mec240k-BP50 pyramid jaws

Multi-Jaw Grip

Description

The multi-jaw grip is for grasping round or irregularly shaped items. By rotating the sleeve of the grip, the jaws can be opened and closed to achieve a secure grasp on a sample.

Applications

Used for tensile testing of:

- fasteners
- small components
- textiles

500 N and 200 N Wedge Grips

Description

The 200 N / 500 N wedge grip is a small, lightweight grip designed for tensile testing. As load is applied, the wedge action of the jaws increases the grip on the sample. A spring-loaded lever allows the serrated jaws to open and close easily for the fast securing and release of samples. The 200 N grip includes the chain link assembly for ease of loading samples. A slot in the back accommodates samples wider than the jaws.

Supplied individually.

Applications

Used for general purpose tensile testing of:

- crimp and welded joints
- laminates
- films
- wires
- flexible sheet materials
- textiles
- many other materials

Specifications

| Part No. | Load Capacity | | | Thread 1 | Jaw Width (A) | | | Jaw Opening | | Height | | Weight | |

5 kN Wedge Grip

Description

The 5 kN wedge grip is designed for tensile testing of flat and rigid materials including plastics, rubber and light metals. As load is applied, the wedge action of the jaws increases the grip on the sample. A spring-loaded lever allows the serrated jaws to open and close easily for the fast securing and release of samples.

Supplied individually.

Applications

Used for general-purpose tensile testing of:

- adhesive joints
- plastics
- cables
- polymer
- composites
- crimp and welded joints
- wood
- metals
- rubber

10 kN Wedge Grip, lever-action, QC fitting

MecS622 – steel

◀ MecS622 Wedge Grip shown with a half-set of MecS622-BP pyramid jaws fitted

A versatile lever-actuated wedge grip rated to a tensile force of 10 kN. The initial gripping force is provided by pre-tensioned springs which cause the jaws to close together. The teeth of the jaw faces act to make a preliminary hold of the specimen before the main clamping force is applied by the action of the wedges moving as load is applied to the specimen. A front-facing lever makes it ergonomically easy for operators to release specimens after testing. A locking bar holds the jaws open to facilitate removal and loading of specimens.

The body of the MecS622 Wedge Grip features an 'open back' which makes it ideal for wider specimens to be positioned through the body whilst being held within the 34 x 40mm area of the pyramid jaws (MecS622-BP). For round samples of 2-10 mm diameter a set of V-shaped jaws (MecS622-BV) are available for use with the MecS622 wedge grip. Jaws should be ordered separately.

The MecS622 10 kN Wedge Grip is especially suitable for holding a variety of materials such as plastic strips and dumbbells, flat and round metal specimens such as sheet, pipes and dumbbells plus textile straps and belts.

Scope of delivery: 1 grip fitted with bore-hole to allow connection to QC-20 fixing post

| | |
|----------------------------------|---------|

20 kN & 50 kN Wedge Grips, lever action, QC fitting

Mec243-20 and Mec243-50 – steel

A compact lever-actuated wedge grip available rated to a tensile force of either 20 kN or 50 kN. The initial gripping force is provided by pre-tensioned springs which cause the jaws to close together. The teeth of the jaw faces act to make a preliminary hold of the specimen before the main clamping force is applied by the action of the wedges moving as load is applied to the specimen. A side-action lever arm allows operators to quickly and easily load and release specimens when testing.

The Mec243 Wedge Grips feature easy interchangeability of jaws making them an ideal universal choice when faced with tensile testing of a variety of shapes and materials. Pyramid (serrated) jaws (Mec243-BP & -BP16) are optimal for testing flat samples up to 16mm thickness. For round samples up to 16mm diameter a set of V-shaped jaws (Mec243-BV & -BV16) are available for use with the Mec243 Wedge Grips. Jaws should be ordered separately.

Both versions of the Mec243 Wedge Grips are especially suitable for holding a variety of materials such as plastic strips and dumbbells, flat and round metal specimens such as sheet, pipes, rods and dumbbells plus textile straps and belts.

Mec 243-20 shown fitted with a half-set of Mec243-BP pyramid jaws

Mec243-50 Wedge Grip shown fitted with a half-set of Mec243-BV 'V'-jaws

| Item No: | Mec243-20 | Mec243-50 |
|---|-------------------|-------------------|
| Rated capacity: | 20 kN | 50 kN |
| Opening (depending on jaws): | up to 16 mm | up to 16 mm |
| Weight each grip(without jaws): | 3.8 kg | 6.75 kg |
| Scope of delivery: 1 grip fitted with bore-hole to allow connection to: | QC-20 fixing post | QC-32 fixing post |

Jaws for Mec243: scope of delivery 0.5 set = 2 jaws (left & right)

| Item No. | Surface | Clamping surface H x W | Opening | Weight per 0.5 set |
|-------------|-------------------------|------------------------|-------------|--------------------|
| Mec243-BP | Pyramid (serrated) jaws | 50 x 35mm | 0 – 13mm | 0.48 kg |
| Mec243-BP16 | Pyramid (serrated) jaws | 50 x 35mm | 4 – 16mm | 0.41 kg |
| Mec243-BV | V-jaws | Clamping height 50mm | 3 – 13mm Ø | 0.46 kg |
| Mec243-BV16 | V-jaws | Clamping height 50mm | 4 – 16mm Ø | 0.41 kg |
| Mec243-BV20 | V-jaws | Clamping height 50mm | 10 – 20mm Ø | 0.35kg |

Jaws with other dimensions and surface coatings on request

Mec243-BP Pyramid jaws

- Hardened steel 58 HRC
- Pyramids 1.2 x 45°

Mec243-BV -V-jaws

- For all kinds of round samples
- Hardened steel 58 HRC
- Tooth pitch 1.2 mm

Assisted-Pull Peel Table

Description

The assisted-pull peel table is fixed to the anvil plate and the crosshead of a test stand. The carriage of the peel table is directly driven horizontally by the vertical movement of the test stand crosshead, maintaining a constant 90 degree peel angle for the specimen.

Applications

Used for peel testing of:

- adhesive tapes
- packaging
- flexible laminates

Specifications

Floating Peel Jig

Description

The floating peel jig is used to test flat samples with a flexible layer and a rigid or semi-rigid substrate, such as credit cards, and enables the card to move smoothly under the rollers while delamination tests are carried out. The fixture maintains a constant 90 degree peel angle for the specimen.

Applications

- films
- tapes
- laminates
- labels
- decals

Coefficient of Friction Fixture

Description

The Coefficient of Friction Fixture is designed to measure the coefficient of friction between two pieces of material (usually plastic film) when pulled at a constant speed with a fixed pressure between the surfaces. The fixture consists of a long flat bed and a sled. The bed is mounted to a fixing plate suitable for use with Mecmesin tensile testers. The sled is moved along the bed by the movement of the tensile testing machine. The sled connects to the load cell via a thread passing over a low friction pulley. The sled speed is therefore identical to the speed of the tensile tester with the friction load being measured directly by the loadcell.

The bed has a clamping plate at the rear to hold the specimen material securely in place during the test. For additional stability the specimen material may also be taped to the bed if required. The sled is wrapped in a sponge rubber and designed to give the correct pressure between the two halves of the sample as defined by the relevant standard. Specimen material is fixed to the sled using conventional or double-sided adhesive tape.

A bi-directional spirit level and adjustable feet allow the bed to be levelled thereby ensuring that specimens are tested in a completely horizontal plane.

Applications

Used for friction testing primarily of plastic films, sheets, foils and paper.

Specifications

| Part No. | Standard | Sled Dimensions | | Sled mass | Bed length | |
|----------|------------|-----------------|----------------------------------|-----------|------------|-------------------|
| 432-144 | ASTM D1894 | 63 x 63 mm | 2.5 x 2.5 [□] (nominal) | 200g ± 5g | 370 mm | 14.6 [□] |
| 432-501 | ISO 8295 | 63 x 63 mm | 2.5 x 2.5 [□] (nominal) | 200g ± 2g | 370 mm | 14.6 [□] |

Peel Jigs for test standards (FINAT, ASTM, AFERA, PSTC)

A number of test methods and standards employed by various industry bodies call upon specific peel jigs and associated accessories to be used in conjunction with a tensile tester. Mecmesin has developed a range of peel jigs and accessories to meet the demands of the most commonly used standards.

| Part No. | Description | QC connection |
|------------|--|---------------|
| PDV13016-C | 180 degree Peel Jig - lower (FINAT 1 & FINAT 3) | Yes - QC 20 |
| PDV15031 | 90 degree Assisted Peel Table incl. rails for fixing Float Glass - lower (FINAT 2) | Yes - QC 20 |
| PSV15030 | Float Glass 2" wide x 8" long for use with above Assisted Peel Table | N / A |
| PSV14155 | Standard FINAT Roller - 2kg | N / A |
| PSV13007 | Sample cutter (15 mm and 1 inch wide) + Protective Mat | N / A |
| PDV13016-A | Tack Test Jig - lower (FINAT 9) | Yes - QC 20 |

180 degree Peel Jig (FINAT 1) – Peel Adhesion

- Remove backing material from 25 mm wide strip
- Affix to test plate (PDV13016-C) and roll twice using standard roller (PSV14155)
- Fit test plate (PDV13016-C) to base of tensile tester
- Fit strip into upper grip (Mec227-BG50) of tensile tester so that test angle is 180 degrees
- Separate the adhesive strip from the test plate at a rate of 300 mm/min
- Record data from the central section of the adhesive strip as it is peeled
- Calculate the average of the peel force and express the value as Newton/25 mm width
- Describe the type of failure (cohesive failure, adhesive transfer, etc.)

Note: tests to be conducted after 20 mins and 24 hours.

- ◀ Test Plate (PDV13016-C) shown with 25 mm strip being held in Upper Grip
- ▼ Test Plate (PDV13016-C) for connection to a QC-20 Fixing Post of test stand

Click to Watch now on Mecmesin.tv

90 degree Peel Jig (FINAT 2) – Peel Adhesion

Typically gives lower values than FINAT 1 and is considered useful when failure mode of materials is 'paper tear'

- Remove backing material from 25 mm wide strip
- Affix strip to float glass (PSV15030) and roll twice using standard roller (PSV14155)
- Fit float glass into horizontal pull-peel table (PDV15031) positioned on base of tensile tester
- Fit strip into upper grip (Mec227-BG50) of tensile tester. Test angle is now maintained at 90 degrees
- Separate the adhesive strip from the test plate at a rate of 300 mm/min
- Record data from the central section of the adhesive strip as it is peeled
- Calculate the average of the peel force and express the value as Newton/25 mm width
- Describe the type of failure (cohesive failure, adhesive transfer, paper tear, etc.)

Note: tests to be conducted after 20 mins and 24 hours.

▲ Pull-Peel Table (PDV15031) shown with 25mm strip being held in Upper Grip (Mec227-BG50)

Click to Watch now on
Mecmesin.tv

180 degree Peel Jig (FINAT 3) – Low-speed Release Force to separate release backing

- Affix 50 mm wide strip to test plate (PDV13016-C) using double-sided tape
- Fit test plate (PDV13016-C) to base of tensile tester
- Fit strip into upper grip (Mec227-BG50) of tensile tester so that test angle is 180 degrees
- Separate the adhesive strip from the test plate at a rate of 300 mm/min
- Record data from the central section of the adhesive strip as it is peeled
- Calculate the average of the peel force and express the value as Newton/50 mm width

Note: To ensure good contact between release backing and adhesive the tests are to be conducted 20 hours after strips have been compressed together.

▲ Test Plate (PDV13016-C) shown with 50 mm strip being held in Upper Grip (Mec227-BG50)

▲ Test Plate (PDV13016-C) for connection to a QC-20 Fixing Post of test stand

Click to Watch now on
Mecmesin.tv

Tack Test Jig (FINAT 9) – Loop Tack (aka "Quick-stick") measurement

- Remove backing material from 25 mm wide strip
- Form loop with adhesive surface being outermost
- Fit loop into upper grip (Mec227-BG50) of tensile tester
- Compress the loop to lower Tack Test Jig (PDV13016-A) at 300 mm/min until full contact over float glass plate has been achieved
- Immediately reverse the tester to separate the loop from the glass plate at a tensile rate of 300 mm/min
- Record the maximum separation force

Note: If adhesive transfer or paper tear occurs this should be recorded

◀ Test Plate (PDV13016-A) shown with 25 mm strip being held in Upper Grip (Mec227-BG50)

▼ Test Plate (PDV13016-A) shown with float glass plate fitted

Additional Accessories

Standard Roller (FINAT) - applies a standard pressure to the specimen irrespective of the variation in hand pressure on the handle.

◀ Roller of 85 mm diameter and 50 mm width. Fitted with rubber surface of Shore hardness A 80. Weight is 2kg

Part no: PSV14155

Sample Cutters - allows specimen strips to be cut cleanly and straight to the required width. Supplied with protective mat, 15 mm x 1 inch width adjustment block and spare cutter blades.

◀ 115 mm and 1 inch wide cutter. Specimen widths from approximately 15 mm – 70 mm may be cut.

The Width Adjustment Block quickly enables sample widths of 15 mm or 1 inch to be prepared for ASTM F88, JIS Z 0238:1998 and JIS Z 1707:2019.

Part no: PSV13007

Pull Peel Wheel Fixture

Description

The pull peel wheel fixture is designed for mounting to the base of a motorised test stand to test the peel strength of flexible adhesive-backed materials. Samples are wound around the wheel and the free end is clamped in a suitable upper grip connected to a loadcell. The minimal-friction bearing ensures a constant 90° peel angle.

Applications

Used for peel testing of:

- laminated coatings
- adhesive-backed tape
- adhesive-backed films and foils

Specifications

FPT-H1 Friction Sleds

▼ 432-628: 800 g sled shown with ISO 15359 friction test kit

▲ 432-638: 200 g foam faced: ASTM D1894, ISO 8295

Description

The FPT-H1 Coefficient of Friction tester can be fitted with sample sleds of the correct weight, size and facings for a wide variety of international standard test methods. Sleds can be drawn from either end, and have magnetic catches for quickly and cleanly securing film samples.

ISO 15359 prescribes mechanical lifting and lowering of the sled, and friction-free guide rails. The kit for this test requires a factory-fitted servo lift, but the rails can be easily removed for any other form of testing. The lift is software-controlled by the installed test program.

Sleds include the recommended linkages for the tests shown, to avoid slip-stick in kinetic friction testing.

Specification

| Part no. | Face Length | Face Width | Mass | Face Material | Suitable for standards |
|----------|-------------|------------|-------|---------------|------------------------|

FPT-H1 Coefficient of Friction Heated Plane

▲ Fitted to FPT-H1-xt

Description

The coefficients of friction of plastic films change with temperature. Testing at elevated temperatures can therefore be useful to establish hot-running machine settings. This heated plane has a control box and attaches to the FPT-H1 for use with its standard friction fixtures. With an operating temperature maintained to within 5°C, this unit will enable repeatability in the testing of plastic films, in accordance with ASTM D1894, or your own requirements.

Specification

| Part no. | Heated area length | Heated area width | Height |
|----------|--------------------|-------------------|-------------------|
| 432-640 | 318 mm (12.5 in) | 148 mm (5.8 in) | 24.5 mm (0.96 in) |

| | |
|---------------------------|------------------------------|
| Max. temperature | 85°C |
| Warm-up time | 30 minutes |
| Accuracy | 5°C |
| Power supply | 24 VDC |
| Operating temperature | 10°C to 40°C (32°F to 122°F) |
| Humidity | 20% to 85% non-condensing |
| Ingress protection rating | 30 |

FPT-H1 90° Peel Fixture Kit

Description

The Mecmesin FPT-H1 horizontal coefficient of friction tester can also be used for specific standard peel test methods. Optional fixtures enable 90°, 180° and T-peel testing, which are especially suitable for pressure sensitive adhesive tapes and labels.

The 90° fixture features an assisted sliding table to ensure constant alignment with the draw hook. The table accepts float glass and stainless steel sample plates, to comply with the requirements of a range of standard test methods, including Afera 5001, ASTM D3330, BS EN 1939, FINAT FTM2 and PSTC 101 Method F.

FPT-H1 50 mm Peel Grip (FINAT 3), QC fitting

90° peel of laminated card (with part no. 432-620)▲

180° peel of self-adhesive labels (with part no. 432-636) ▲

Description

The Mecmesin FPT-H1 horizontal coefficient of friction tester can also be used for specific standard peel and tear test methods. This peel grip can be used in conjunction with the FPT-H1 90 degree fixture kit (part no. 432-620) or the FPT-H1 180 degree peel fixture kit (part no. 432-636) where the drawn part of the sample is non-adhesive, in place of the standard hook fixture.

This single-action grip has rubber-faced jaws for securely gripping backing layers, plastic film, paper and card. Supplied as a single grip.

Suitable for test standards FINAT FTM1, 2 & 3; ASTM D3330, D6252, TLMI L-IA1 & 2

FPT-H1 T-Peel Jig, QC fitting

Description

The Mecmesin FPT-H1 horizontal coefficient of friction tester can also be used for specific standard peel and tear test methods. For T-peel, two 25 mm vice grips are used.

Sold as a pair, these small vice grips have both jaws adjustable, and are rubber-faced for securely gripping plastic films, paper and card.

FPT-H1 Lightweight Tear Grips, QC fitting

Tear-testing plastic film ▼

Tear-testing perforations ▼

Description

The Mecmesin FPT-H1 horizontal coefficient of friction tester can also be used for specific standard peel and tear test methods. For tear testing, two 100 mm vice grips are used.

Sold as a pair, these small vice grips have both jaws adjustable, and are rubber-faced for securely gripping plastic films, paper and card.

Specification

| Load measurement | |
|------------------|----------------------------------|
| Loadcell range | 10 N, 100 N, (2.2 lbf, 22.5 lbf) |
| Load resolution | 1:6500 |
| Load accuracy | ±0.1% of full scale output |

FPT-H1 Loadcell Calibration Check Rig

Description

The Loadcell Calibration Check Rig is a bench-top pulley and cord jig which allows the on-site verification of the calibration status of the loadcell of an FPT-H1 Friction Peel Tear tester. Using dead-weight masses suspended on a hanger (ordered separately), the kit allows you to quickly decide whether or not adjustment, recalibration or repair is required. The pulley jig is clamped to the bench-top, the weights are carefully added and the load reading on the console is checked to verify if it is within the manufacturer's specification of +/- 0.1% of the rated capacity of the loadcell.

When a loadcell is beyond its recommended calibration date, this will be indicated when you switch the system on. It should be returned to Mecmesin or your distributor, for recalibration in a controlled laboratory environment. The Calibration Check Rig does not replace the need for regular professional calibration under controlled laboratory conditions by Mecmesin-approved providers.

The calibrated slotted masses are available for a 10 N or 100 N loadcell.

Specifications

| Part No. | Description |
|----------|--|
| 432-635 | FPT Calibration verification pulley-jig (excluding masses) |
| 432-655 | Lightweight hanger and 5 N slotted mass for verifying FPT 10 N |
| 432-656 | Lightweight hanger and 50 N slotted mass for verifying FPT 100 N |

432-635 Pulley jig clamped to bench-top and calibrated weights applied for loadcell accuracy verification

Button Pull-off Fixture with 3 Plates

Description

This fixture engages the button shank in a slot for testing the tensile strength to failure. Three slotted interchangeable plates accommodate different shank diameters. A shatter-protection guard contains broken buttons. Typically used with the 25 mm / 50 mm 'grab test' textile fixture.

Applications

- buttons

Specifications

| Part No. | Load Capacity | Thread 1 | Slot Widths | Max Button Ø | Length |
|----------|--------------------------|-----------|---|---------------|----------------|
| 432-175 | 500 N / 50 kgf / 110 lbf | 10/32 UNF | 3 mm / 5 mm / 7 mm (0.12" / 0.2" / 0.28") | 35 mm (1.38") | 102 mm (4.01") |

Sequin Pull-off Fixture

Description

This fixture holds the sequin in the serrated jaw of a pair of clamping forceps hooked over a stainless steel test hook. The 10/32 UNF thread of the hook attaches directly to the loadcell or force gauge.

The sample fabric is held in a suitable lower fixture mounted to the anvil plate - typically the 25 mm / 50 mm 'Grab Test' textile fixture.

Applications

Used for pull-off testing of:

- clothing decoration

Specifications

Modified Large Wedge Grip

Description

The modified large wedge grip has a shorter body with longer jaws to be able to securely hold S-spring poppers for tensile test-to-failure. As load is applied, the wedge action of the jaws increases the grip on sample.

Applications

- poppers
- press studs

Specifications

| Part No. | Load Capacity | Thread 1 | Jaw Opening | Jaw Width | Length | Weight |
|----------|--------------------------|-----------|---------------|---------------|----------------|-----------------|
| 432-212 | 1 kN / 100 kgf / 225 lbf | 10-32 UNF | 11 mm (0.43") | 25 mm (0.98") | 160 mm (6.30") | 166 g (0.37 lb) |

Popper Cam Base

Description

The popper cam base is secured to the base of a test stand to test the strength of poppers and press studs. The popper is fed through the retaining hole and positioned over the retaining post. The lever of the cam mechanism is locked down to raise the popper with the fabric so that it can easily be gripped typically the 3-jaw popper pull-off fixture is used.

Applications

Used by clothing manufacturers for test-to-failure testing for compliance with BS 7907:2007 on

- poppers and press studs

Container Holders for Tensile Testing

▲ 432-677 V-jaw vice clamp, three jaws shown with quick lock and release lever

▲ 432-493 Small 4-peg container holder

Description

Mecmesin offers several lower fixture solutions for the gripping of containers during tensile testing. All provide adjustability to securely hold different sample shapes and sizes.

Applications

Used for tensile testing of:

- Plastic container closures; pull-off, disassembly resistance
- Opening force of pull-up, sports style or flip-cap closures
- General product or packaging pull tests

V-jaw Vice Clamps, QC fitting

Two versions are available, each with opposing V-shaped, serrated rubber-faced jaws. These securely grip samples made of smooth or low-friction materials, such as plastics.

432-678 features 4 jaws which are adjusted using a knob to position them equidistantly around the central axis.

432-677 features 3 jaws where the single jaw features a quick lock/release lever to speed up testing of batches of the same sized container.

Axial alignment is achieved by lateral adjustment of the clamping component in the dovetail support, locked with a thumbwheel.

Both versions feature a bore hole for connection to a QC-20 fixing post.

▲ 432-677 Pull-up force to open the spout of a closure

V-jaw vice clamp, three jaws with quick lock and release lever

432-677 has three jaws, two vertically spaced on one side, clamping with a single jaw at mid-height. The double jaw is precisely adjusted with a screw-action handle and the single jaw is locked and unlocked into place with a toggle-action lever. This allows quick loading and release of the test sample.

V-jaw vice clamp, four jaws with precision screw-action adjuster

432-678 has four jaws, for increased stability, with two jaws being vertically spaced on either side, clamping at alternate heights. Both jaws are precisely adjusted around the central axis with a screw-action handle.

▲ 432-677 clamping and support components, open and closed condition

▲ 432-678 clamping and support components, open condition

| Part No. | Load Capacity | | | Post Ø | Opening Range | | Lateral Adjustment | | Height | |
|----------|---|--------|---------|--------|---------------|-------------------------|--------------------|--------------------|--------|-------------------|
| 432-677 | 500 N | 51 kgf | 112 lbf | 20 mm | 10 - 80 mm | 0.4 - 3.15 ² | ±60 mm | ±2.36 ² | 110 mm | 4.33 ² |
| 432-678 | | | | | | | | | | |
| 432-679 | Repair kit including replacement rubber jaw faces for regular high-load usage | | | | | | | | | |

▲ Support component

▲ 432-677 Clamping component side view

▲ QC-20 fitting

Container Holder (4-peg adjustable)

The 4-peg container holder is designed to securely hold different shapes and sizes of containers during tensile testing. Gripping pegs are screwed into the appropriate holes on each of the two fixing rails. The rails are then adjusted by turning the knob to clamp the sample. The pegs are rubber-coated to provide enough friction to grip the container without damaging its surface. Available in two sizes both of which connect directly to the base of a motorised test stand.

| Part No. | Load Capacity | | | Thread 1 | Opening Range | | Height | |
|----------|---------------|--------|--------|----------|----------------|---------------------------------------|--------|-------------------|
| 432-411 | 100 N | 10 kgf | 22 lbf | 4 x M5 | 10 mm / 190 mm | 0.39 ² - 7.48 ² | 102 mm | 4.00 ² |
| 432-493 | 100 N | 10 kgf | 22 lbf | 4 x M5 | 10 mm / 78 mm | 0.39 ² - 3.07 ² | 103 mm | 4.04 ² |

▲ 432-411 Large 4-peg container holder, plastic bottle application

▲ 432-493 Small 4-peg container holder, cosmetics applicator pull-off test

▲ 432-411 Large 4-peg container holder, plastic bottle application

Cork Extraction Test Rig

Description

The cork extraction test rig is used to test the extraction force of bottle stoppers. It has a bottle cradle with an antislip surface and is easily adjusted to accommodate different bottle heights, e.g. 200 ml to 750 ml. It is used in conjunction with corkscrew test accessories suitable for testing natural and synthetic corks.

Applications

Used for extraction testing of:

- corks
- stoppers

Force Gauge Gripping Cradle

Description

This cradle allows Mecmesin gauges to be used more easily as hand-held instruments. The dual-handle design allows the comfortable application of push/pull loads, with increased stability. Attachment screws supplied.

Applications

Used to evaluate the ergonomics and force application characteristics of:

- doors
- filing cabinets
- emergency push bars
- handles and controls

Specifications

| Part No. | Load Capacity | Handle Diameter (Ø) | Handle Length | Width |
|----------|----------------------------|---------------------|---------------|----------------|

Trolley Pushing Fixture

Description

The trolley-pushing fixture has been designed to attach to trolleys, carts and wheelie bins so that manual handling measurements can be made more easily. Typically used with a force gauge fitted to the force gauge gripping cradle or pistol grip (order separately).

Applications

Used to evaluate the ergonomics and force application characteristics of:

- trolleys
- carts
- wheelie bins

Rubber-Faced Compression Plates

Description

The rubber-faced compression plate has a rubber layer which helps to prevent damage to the sample that would occur from metal contact during a compression test. Also increases grip at the point of force application on low friction or curved specimens.

Applications

Used for compression testing of components:

- metals
- glass
- slippery or curved samples

Specifications

Padded Radiused Probe

Description

The padded radiused probe is specially designed for use against limbs for rehabilitation and physical therapy assessment. Use with a short extension rod.

Applications

- physical therapy assessments
- leg extension tests

Transit Case for Manual Handling / Ergonomic Kit

Description

A foam-lined rugged metal case for the components of the advanced or basic manual handling kit. Supplied as standard with the kit, has space for: a force gauge including rechargeable batteries, mains adaptor / battery charger, gripping cradle, chain link assembly, 50 mm rubber-faced compression plate and test hook.

Universal Expansion Module

Description

Where a gauge or instrument requires output to a MultiTest-d or -dV test stand (e.g. for reverse or stop control) but also simultaneously to a RS232 printer, analogue output or other peripheral device, this expansion module can be used.

One input channel (RS232 15-pin, F) and four output channels (RS232 15-pin, M).

For use with: AFG Mk 4, AFTI Mk 4, Orbis Mk 2, Tornado Mk 2

Digital I/O Loop-back Plug

Description

Mecmesin's -i and -xt test stands have the facility for six digital inputs and six digital outputs that can be used to integrate the test stand with programmable logic controllers (PLCs) or other equipment.

The 25-pin Digital I/O Loop-back Plug is inserted into the I/O port of any Mecmesin -i or -xt test stand using Emperor™ control software. By virtue of directly routing digital outputs to inputs, it allows the system user to create test programs with an added layer of sophistication.

This is particularly useful for:

- Tests involving many cycles, where only selective data are required. By using 'stop acquisition' and 'start acquisition' commands within Emperor™ programs, it easily permits a long-duration test to be performed but data only to be logged for the pertinent cycles you wish to see.
- Conducting a test routine repeatedly on the same specimen without having to be physically present to press the 'start' button to launch each separate test. Data is collected and presented as separate samples allowing the user to clearly view and report on specimen performance over time.

Specification

| Part no. | Description |
|----------|---|
| 432-663 | Digital I/O Loop-back plug (allows multi-function programming in Emperor™ software) |

Digital I/O port on the rear panel of a test stand

Rear panel with Digital I/O Loop-back Plug inserted

Digital Gauge to PC Input Tool

Description

The PC input tool allows for individual gauge readings from AFG, AFTI, Tornado, BFG or Orbis to be sent directly to an open PC application such as Excel. After each test with the gauge, press the blue button to send the displayed numerical value to the PC.

Requires the appropriate gauge interface cable:

- for AFG/AFTI/Tornado use cable 351-058
- for BFG/Orbis use cable 351-055.

Specification

| | |
|-----------------------------|---|
| Power supply | +5V from PC via USB 'A' connector |
| Supported operating systems | Windows 2000 and above |
| Main unit dimensions | W 38 mm × D 64 mm × H 21 mm |
| Cable length | 1 m |
| Input connector | Digimatic (Mitutoyo) |
| Weight | 55 g |
| Operating temperature | 0°C to 40°C |
| Storage temperature | -10°C to 60°C |
| Applicable standards | USB standard (USB 2.0 certificate, communication speed 12 Mbps) |

Safety Guards

Introduction

Health and safety are of paramount concern when using machinery with moving parts and motorised test equipment is no exception. Safety guards prevent access by the operator to the testing area whilst the test is in progress, acting as a barrier from moving parts where there exists a risk of hands and arms getting caught.

Standard guards

Mecmesin test systems can be supplied with a standard safety guard. These have a rigid metal frame with integrated polycarbonate panels to allow the operator to view the test area from outside. Hinged doors are fitted with switch-activated interlock mechanisms that prevent system operation when open.

Guards for **single-column test stands** are provided on a solid metal platform, with location holes available for securing to a workbench, to ensure complete stability.

Guards for **twin-column test stands** are supplied with new equipment and are pre-fitted to the tester at our factory, all ready for use when unpacked and installed.

Mecmesin's standard safety guards are supplied with CE marking and a Declaration of Conformity in accordance with the following harmonised standards of the Machinery Directive 2006/42/EC:

- BS EN ISO 12100:2010 Safety of machinery — General principles for design — Risk assessment and risk reduction
- BS EN ISO 14120:2015 Safety of Machinery — Guards — General requirements for the design and construction of fixed and movable guards
- BS EN ISO 14119:2013 Safety of machinery. Interlocking devices associated with guards. Principles for design and selection
- BS EN ISO 13855:2010 Safety of machinery — Positioning of safeguards with respect to the approach speeds of parts of the human body
- BS EN ISO 13857:2008 Safety of Machinery — Safety distances to prevent hazard zones being reached by upper and lower limbs
- BS EN ISO 13849-1:2015 Safety of Machinery. Safety related parts of control systems. General principles of design.*
- BS EN ISO 13849-2:2012 Safety of Machinery. Safety related parts of control systems. Validation*

If however, during the risk assessment for your application, you decide that protection from egress is also required, our application engineers can offer a custom design to meet your needs.

* when integrated with the control circuit of the Mecmesin test stands

Standard guard -
single column test stands ▲

Standard guard -
twin-column test stands ▲

Custom guard fitted with wire-mesh protection for door and side-panels ◀

Custom guard with sliding front protective panel and counter-balance for ease of use ▲

Custom-design guards

Due to individual requirements for accommodating different-sized grips and test specimens, safety guards are often made to a custom design. Please contact us with your requirements, and tell us the stand model for which it is intended.

Shown below are a selection of custom-built guards designed and manufactured by Mecmesin for customers using our range of force and torque test systems.

Custom guard with double door for use with torque test system ▲

Protective Covers for Force & Torque Stands

Protect your Investment!

The covers offer protection to all types of Mecmesin motorised test stand in dusty and dirty environments. They are durable and easy to clean, and feature quick-acting velcro fastening strips for simple fitting and removal. Dust covers are available for single-column 2.5 kN force stands and the Vortex range of torque testers.

Force

Available for 2.5 kN stands only

- MultiTest motorised force testing stand (d, dV)
- MultiTest-xt touch screen force testing stand
- MultiTest-i computer-controlled force testing stand

Torque

- Vortex motorised torque testers (d, dV)
- Vortex-xt touch screen torque tester
- Vortex-i computer-controlled torque tester

Bellows and Horizontal Feet Kits for Single Column Test Stands

Protective Bellows Kit

PDV11065, PDV10105: Horizontal Feet Kit for single-column test stands

Description

Bellows Kits

Protective bellows fit into the crosshead aperture in the test stand to guard against sample ingress and dust or liquid splash getting inside the column and damaging internal components. Kits are available for the single-column range of stands, the length being appropriate for the particular column dimension.

NOTE: Fitment of the bellows reduces the throat depth by 18 mm.

Feet Kits

The Horizontal Feet Kits enable a single column test stand to be mounted horizontally, aligning the front panel either on its side or facing upwards. This meets the requirements where the test procedure dictates that the specimen must be tested horizontally.

Specifications

| Part No. | Description |
|----------|--|
| 432-471 | Bellows kit for fitting to MultiTest 2.5 stand (500mm) |
| 432-472 | Bellows kit for fitting to MultiTest 1 stand (1000mm) |
| 432-473 | Bellows kit for fitting to MultiTest 0.5 stand (1200mm) |
| PDV11065 | Feet kit; allows front-panel to be mounted horizontally on its side |
| PDV10105 | Feet kit; allows front-panel to be mounted horizontally facing upwards |

Feet available for other test stands or configurations on request.

PDV10105: Upwards-facing front panel

PDV11065: Example application, side-facing front panel—dispensing compression force test of container closure system

Thread Adapters

Description

Our range of adapters provide interchangeability between grips and fixtures and our range of force testing instruments and test systems. Adapters are usually threaded into the accessory.

Specifications

| Part No. | Load Capacity | | | Thread | Length | | Weight | |
|----------|---------------|----------|----------|--------------------|--------|-------|--------|---------|
| 432-193 | 1 kN | 100 kgf | 225 lbf | 10/32 M to M6 F | 25 mm | 0.98" | 6 g | 0.01 lb |

Adapters for QC range of grips

Description

The Mecmesin QC (Quick-Change) adapters allow grips to be attached to test frames and loadcells quickly and easily without the need for tools. A standard diameter post fits into the bore hole of the QC-type grip and is held in place by an 8 mm diameter lateral pin. Grips are thus securely fixed, but can be exchanged in a matter of seconds.

The QC adapter can be fitted to the anvil plate of the test frame or to the bottom of the loadcell. See the tables for compatibility.

QC adapters for use with grips having 20mm Ø fittings

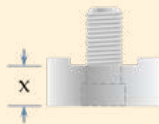

| Description | Part No. | |
|---|----------|--|
| <p>QC Type C - 20 mm Ø Male Post c/w pin & fixing screws</p> <p>-fit to Anvil Plate supplied with Test Frame -fit to Loadcell Mounting Plate</p>  <p>x-height added: 24 mm</p> | 432-284 |   |
| <p>QC mounting plate for 50 kN systems</p> <p>-fit to 50 kN anvil plate, or pancake loadcell, as a base for 432-284. Enables 20 mm QC fixtures to be used on a 50 kN test stand.</p> <p>x-height added: 15 mm</p> | 432-622 |   |
| <p>QC Adapter, converts Type L (F) to C (M)</p> <p>-fits onto a Type L (32 mm) post, for fitting 20 mm QC fixtures.</p> <p>x-height added: 58 mm</p> | 432-623 |   |
| <p>QC Type J - Light-weight Male 20 mm Ø adapter (10/32 UNF hole) c/w pin **</p> <p>-fit to force gauges or loadcells with 10/32 UNF threaded connection</p> <p>x-height added: 32 mm</p> | 432-418 |   |
| <p>Type A Adapter with Pin QC Type A - Male 20 mm Ø adapter (5-16 UNC hole) c/w pin **</p> <p>-fit to force gauges or loadcells with 5-16 UNF threaded connection</p> <p>x-height added: 32 mm</p> | 432-282 |   |
| <p>QC Type K - Female Sleeve 20 mm Ø c/w pin & fixing bolt (5-16 UNC)</p> <p>-convert a non QC-type grip to QC-type by attaching sleeve to the grip</p> <p>x-height added: 55 mm</p> | 432-429 |   |
| <p>QC Type B - Female Sleeve 20 mm Ø c/w pin & fixing bolt (M12)</p> <p>-convert a non QC-type grip to QC-type by attaching sleeve to the grip</p> <p>x-height added: 55 mm</p> | 432-283 |   |

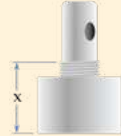

e.g. QC Type K Female sleeve with wedge grip

* N.B. Great care should be taken when selecting grips for use with low-capacity loadcells due to risk of overload
** N.B. Secured with a single screw fitting, so the orientation of the locking-pin hole is not guaranteed

QC-adapters for use with grips having 20mm Ø fitting.

| Description - Loadcell Mounting Plates | Part No. | |
|---|----------|---|
| QC Type M - Loadcell Mounting Plate - 13 mm wide slot c/w M6 bolt for 100 N & 200 N S-beam loadcells x-height added: 14 mm | 432-452 |   <p align="center">Fitting Loadcell Mounting Plate to ILC-S</p> |
| QC Type D - Loadcell Mounting Plate - 19 mm wide slot c/w M6 bolt for 500 N S-beam loadcells x-height added: 14 mm | 432-285 | |
| QC Type E - Loadcell Mounting Plate - 19 mm wide slot c/w M10 bolt for 1000 N S-beam loadcell x-height added: 14 mm | 432-286 | |
| QC Type F - Loadcell Mounting Plate - 25 mm wide slot c/w M12 bolt for 2500 N, 5000 N & 10 kN S-beam loadcells x-height added: 25 mm | 432-287 | |
| QC Type G - Loadcell Mounting Plate - 25 mm wide slot c/w M16 bolt for 25 kN S-beam loadcell x-height added: 25 mm | 432-288 | |

QC adapters for use with grips having with 32 mm Ø fitting

| | | |
|---|---------|--|
| QC Type L - 32 mm Male Post c/w pin & fixing screws for connection to 20 kN and 50 kN Pancake loadcells and anvil plate of 50 kN Test Frame. Uses a 12 mm diameter pin. x-height added: 30 mm | 432-451 |   |
|---|---------|--|

Extension Rods

Description

Extension rods are used to add length to a fixture often to prevent the specimen making contact with the gauge/loadcell e.g., when compressing a plunger into a cylinder. They are also used to connect a force gauge or loadcell to a grip or fixture e.g. a wedge grip or test hook. The thumbwheel or locking nut are used to secure the grip in the correct orientation - care should be taken not to overtighten when using with low capacity gauges and loadcells.

Specifications

| Part No. | Load Capacity | Securing | Thread 1 | Thread 2 | Length (A) | Diameter (B) | Length (C) | Weight | |

Crosshead Extensions and Elevated Base Plate

▲ Crosshead Extension and Elevated Base Plate

Description

The 38 mm crosshead extension and elevated base plate are supplied together as a kit under part number 432-406. They are used for fitting larger samples up to 200 mm diameter to a single-column MultiTest system. The baseplate replaces the standard 8 mm height anvil plate. When fitted, the cantilever effect of such an extension serves to reduce the maximum rating to 1.6 kN.

The 38 mm and 16 mm crosshead extensions are available to order separately for applications requiring increased space. Suitable for both tension and compression.

Specifications

Crosshead Extension and Elevated Base Plate

| Part No. | Load Capacity | | | Thread 1 | Width | | Depth | | Height | |
|----------|---------------|---------|---------|----------|--------|-------------------|--------|-------------------|--------|-------|

Dovetail Brackets and Mounting Plates

432-427 Dovetail bracket

432-326 Extended dovetail bracket

432-131 CFG⁺ Mounting plate

Description

The dovetail bracket is used for mounting a Mecmesin Advanced Force Gauge (AFG) or Basic Force Gauge (BFG) to the crosshead of manual and motorised test stands, to allow precise lateral alignment of the gauge. Supplied with socket-head fixing screws M5 x 12 mm.

The extended dovetail bracket is used for mounting a Mecmesin Advanced Force Gauge (AFG) or Basic Force Gauge (BFG) to the crosshead of manual and motorised test stands, to allow precise lateral alignment of the gauge. The extended length provides 70 mm (2.76") of extra daylight. Supplied socket-head fixing screws M5x10 mm.

This mounting plate allows a Mecmesin Compact Force Gauge+ (CFG+) to be mounted onto the crosshead of a test stand. Supplied with 4 x M3 fixing screws.

Specifications

Mini V-block

Description

The mini V-block is a precision-engineered mounting block which allows smaller samples to be securely held in a centrally-aligned position, without excessive clamping force.

V-block Fixtures to hold 'irregular shaped' samples

Alternative V-block fixtures can be designed and manufactured for specific requirements. Contact Mecmesin for details.

3-jaw and 4-jaw Torque Chucks

When seeking to hold small components or assemblies for torque testing it is often possible to utilise the flexibility provided by a standard machine-chuck. Mecmesin has taken off-the-shelf chucks and adapted them to fit to our Vortex and Helixa Torque Testing Systems and 'TS' Torque screwdrivers to create a simple and affordable gripping solution.

Vortex 4-jaw Torque Chucks

3 models in the range. Each 4-jaw chuck is delivered with 3 sets of interchangeable jaws which can quickly and easily be fitted using the fixing screws supplied.

- **Upper 'key-operated' 4-jaw Chuck (small)** fitted with a square-drive adapter for connection to Vortex torque sensors. Supplied with dedicated chuck-key. Recommended for use only with 6 N.m and 10 N.m sensors. Part no: 432-444

Max opening of chuck = 50 mm
Weight including jaws: 490 g

- **Lower 'key-operated' 4-jaw Chuck (small)** fitted with a round shaft for connection to the motor spindle of Vortex torque stands. Part no: 432-496

Max opening of chuck = 50 mm
Weight including jaws: 490 g

- **Lower 'keyless' 4-jaw Chuck (large)** fitted with a round shaft for connection to the motor spindle of Vortex torque stands. Jaws may be tightened by hand or using the levers provided. Part no: 432-445

Max opening of chuck = 80 mm
Weight including jaws: 1400 g

▲ Upper 'key-operated' 4-jaw Chuck shown with jaws fitted

▲ Upper 'key-operated' 4-jaw chuck shown with key fitted and specimen held in mini-jaws

▲ Lower 'keyless' 4-jaw Chuck shown with tightening levers

Interchangeable Jaws

Mini jaws

Standard jaws

Long jaws

Jaw openings for upper and lower key-operated chucks (432-444 and 432-496)

| | | |
|---------------|-----------------------|-----------------------|
| Mini jaws | min 1 mm - max 16 mm | Contact height: 28 mm |
| Standard jaws | min 22 mm - max 34 mm | Contact height: 10 mm |
| Long jaws | min 6 mm - max 22 mm | Contact height: 29 mm |

Jaw openings for lower keyless chuck (432-445)

| | | |
|---------------|-----------------------|-----------------------|
| Mini jaws | min 1 mm - max 37 mm | Contact height: 31 mm |
| Standard jaws | min 37 mm - max 72 mm | Contact height: 14 mm |
| Long jaws | min 10 mm - max 42 mm | Contact height: 32 mm |

Helixa 3-jaw Torque Chucks

5 models in the range. Each 3-jaw chuck is delivered fitted to an adapter specifically to suit the Helixa Precision Torque Tester.

- **Upper 'key-operated' 3-jaw Chuck** fitted with a square-drive adapter for connection to Helixa torque sensors. Recommended for use only with 3 N.m and 6 N.m sensors:

□ 3/8" version.

Max opening of chuck = 9.5 mm

Weight: 200 g

Part no: 432-615

□ 1/2" version.

Max opening of chuck = 12.7 mm

Weight: 300 g

Part no: 432-617

- **Lower 'key-operated' 3-jaw Chuck** fitted with a round shaft for connection to the 'quick-change' adapter on the motor spindle of Helixa torque stands:

□ 3/8" version.

Max opening of chuck = 9.5 mm

Part no: 432-614

□ 1/2" version.

Max opening of chuck = 12.7 mm

Part no: 432-616

▲ Upper and lower 'key-operated' 3-jaw Chucks shown fitted to Helixa

- Lower 'keyless' 3-jaw Pin Chuck fitted to the adapter on the motor spindle of Helixa torque stands:

Max opening of chuck = 3.2 mm
Part no: 432-509

'TS' Torque Screwdriver 3-jaw Chuck

A 3-jaw chuck is available for use with Mecmesin 'TS' Torque screwdrivers. It has a 3/8" opening and is being connected to the 'TS' screwdriver via a square drive spindle.

The 3/8" chuck is supplied as standard with every new 'TS' Torque Screwdriver.

▲ Lower 'keyless' 3-jaw pin chuck shown fitted to adapter

Closure Mandrels

The challenge posed to hold an ever-increasing variety of shapes and sizes of closures and containers is significant. Mecmesin has over 25 years of experience in working with a diverse group of customers to develop gripping solutions for torque testing. Whilst many closures and containers can be held by 'standard' grips it is frequently the case that 'customised' grips are required to secure the more unusual and odd-shaped specimens - these can be designed and made by Mecmesin engineers to suit your exact requirements.

Fixing Table

A common 'standard' gripping solution features a Fixing Table with 4 rubber-coated pegs. These can be positioned within the table to accommodate closures between 10-78mm in diameter. The pegs are tightened manually around the closure by the operator — although this provides a versatile method of tightening a wide span of closures it should be noted that it is not a perfect solution. It is not suitable for testing large batches as it takes time to load/unload the samples with consequential operator fatigue to the wrist. In addition, overtightening of the pegs can cause distortion to closures which may affect the repeatability of results.

It is often preferable to use a customised mandrel which has been specifically tailored to meet the size and form of your unique closure.

Mandrels

There are two versions of mandrels available to grip closures for torque testing.

a) 'Split Mandrel' – this comprises 2 mandrel halves which have been machined to suit a narrow span of closure diameters and profiles. The jaws of the mandrel have either a rubber coating or a serrated finish depending on the application requirements. The closure is located between the mandrel halves and is gripped by lightly tightening the mandrels using either a leadscrew or a pneumatic chuck.

◀ Fixing Table with rubber pegs – part no: 432-32

◀ Split mandrel with leadscrew to tighten jaws

▲ Split mandrel with serrated jaws designed for champagne corks

▼ Split mandrel with pneumatic chuck to tighten serrated jaws

▲ Split mandrels to suit differing closure sizes

b) 'Single-form mandrel' – machined specifically as an exact, dedicated, fit to match the profile of a single closure type and recommended for optimal repeatability of testing. The gently-tapered mandrel is placed upon the closure and the mandrel is then 'driven' by a Mandrel Peg Drive to apply the required torque. The mandrel can then move vertically which is essential for testing screw-type closures. Single-form mandrels are made to the user's specific design requirement.

▲ Single-form mandrels to suit closure size and knurl pattern

▲ Selection of single-form mandrels to suit various closure types and forms.

▲ Single-form mandrel with Peg Drive PDV15094-A to test TE bridge torque

The choice of mandrel is determined by the size and shape of the closure, its knurl pattern and the maximum torque expected. If you are not sure which mandrel is best suited to your application simply send some sample closures to our engineers for evaluation and receive a free quotation.

Suitable for various closure types (e.g. CT, ROPP, CR) when testing:

- Application Torque
- Removal Torque
- Incremental Torque
- Tamper Evidence
- Bridge Torque
- Strip Torque
- Re-application Torque

CRC (Child-Resistant Closures)

To actuate the CR mechanism of a closure it is often required to apply an axial load when testing. The Vortex range of Motorised Torque Testers are equipped with a 'top load' tray into which masses can be placed to simulate the axial load. To make this process easy for the operator a Pneumatic Lift Mechanism is available for use with the Vortex range. It only needs the control lever to be turned to apply or release the masses thereby saving time and eliminating fatigue for the operator.

The Vortex Pneumatic Lift can be used in combination with split or single-form mandrels.

Contact Mecmesin for advice on the most suitable gripping solution for your closures and containers.

- ▶ Pneumatic lift attached to Vortex for applying and removing masses to CRC closures – shown with selection of single-form mandrels.

Static Torque Sensor Bench Mounting Stands

432-401:
Bench Mounting Stand for 'mid & hi-torque' ST Torque sensors

432-402:
Bench Mounting Stand for 'TS' Torque Screwdrivers

Description

Bench Mounting Stands are equipped with fixing holes to enable secure and stable support for Mecmesin Static Torque Sensors when in use on a table or work-bench.

Two versions are available; Bench Mounting Stand for 'mid & hi-torque' ST Torque sensors and Bench-Mounting Stand for 'TS' Torque Screwdrivers.

The sensors are positioned inside the Mounting Stands and secured by the appropriate fixing screws. This allows the operator to attach the test specimen to the sensor and then apply torque directly to the specimen by hand as required.

Two sizes of 3-jaw chuck are available for use with Mecmesin 'TS' Torque screwdrivers; $\frac{1}{2}$ " opening and $\frac{3}{8}$ " opening each being connected to the 'TS' screwdriver via a square drive spindle. The $\frac{3}{8}$ " chuck is supplied as standard with every new 'TS' Torque Screwdriver, whereas the $\frac{1}{2}$ " chuck can be purchased as optional accessory.

Fixing Tables, Clamps and Mandrels for Torque Testing

Mecmesin offers a selection of fixturing solutions for use with all of our torque testers, each designed to provide the adjustability to securely hold different sample shapes and sizes.

Our manual torque testers (Orbis, Tornado and CAPTEST) are supplied as standard with a Torque Fixing Table and a set of 4 rubber-coated, threaded fixing pegs of 35 mm height for gripping samples. Optional longer Fixing Pegs or V-jaw Clamps are available to fit onto the Fixing Table to grip more awkwardly-shaped samples.

Torque Fixing Tables have also been developed as optional accessories specifically to fit to the motorised Vortex or Helixa range of torque testers. Rubber-coated pegs and V-jaw Clamps are available to fit onto these Torque Fixing Tables to securely grip the sample.

432-321 Upper Fixing Table (Vortex) shown with 35 mm high standard Pegs

432-600 Precision Lower Fixing Table (Helixa) shown with 432-602 V-jaws fitted

PSV18155 V-Jaw with Toggle Clamp (Tornado/Orbis/Vortex)

Description

Fixing Tables

Fixing Tables are a useful general-purpose grip offering highly versatile clamping of specimens, since they are fully adjustable to accommodate a variety of forms.

For the Helixa and Vortex motorised torque testing systems; **Upper Fixing Tables** connect directly to the respective torque sensor and **Lower Fixing Tables** connect to the motor spindle.

Upper and Lower Fixing Tables can be used in combination with each other. Alternatively, they can be used individually to hold one end of a sample, whilst the other end is held in a different torque grip or a custom-built fixture.

Fixing Tables feature a stainless-steel leadscrew with adjustable running-plates that have threaded holes. These holes accept Fixing Pegs and V-jaw Clamps within which specimens are held.

Note: To avoid the risk of damaging the torque sensor by excessive tightening of the handle; it is recommended that the Upper Fixing Table only be used with sensors of 6 N.m and above.

Saddle Plates

To provide extra support for containers which may not have a flat base, the Saddle Plate is a popular option. It easily connects to the Lower Fixing Table and is available in 2 sizes to suit the Vortex / Orbis / Tornado 6 & 10 N.m (432-424) and the Tornado 1.5 & 3 N.m (432-407).

See separate datasheet for more details.

432-321 Upper Fixing Table and 432-447 Pegs gripping a thermostatic radiator valve control

432-424 Large and 432-407 Small saddle plate

Fixing Pegs

Four rubber-coated pegs for 35 mm height support are supplied as standard with the Upper and Lower Fixing Tables (432-321 and 432-320) for the Vortex. They are screwed into appropriate threaded holes to suit your specimen dimensions. The pegs are then tightened using the handle and leadscrew to secure the specimen in place. Longer fixing pegs of 100 mm are available for securing taller specimens.

See separate datasheet for more details.

432-424 Large Saddle Plate and 432-250 Extended length (height) Pegs gripping a tall petaloid base plastic bottle

V-Jaw Clamps

Rubber-faced V-jaw clamps are available as an alternative solution to standard fixing pegs. They may be more appropriate for gripping specimens which require a greater area of surface contact to avoid slipping. Particularly useful for testing of smooth or low-friction materials.

V-jaw Clamps for Helixa (432-602)

Features V-shaped rubber faces with an angle of both 90 and 120 degrees to suit various specimen geometries. The jaws can be easily removed and reversed by means of the fixing screws. Stable clamping is achieved by two vertically-spaced jaws on one side, stacked above and below the single opposing jaw. This accessory fits to the Helixa's Precision Lower Fixing Table (432-600) and is ideal for gripping small and/or low-friction surfaces of specimens.

432-600 Precision Lower Fixing Table and 432-602 V-jaws

V-jaw Clamps for Vortex/Orbis/Tornado

PSV18155 (with toggle clamp for quick release) and PSV18221 (screw adjustment) are designed to fit onto the Vortex Lower Fixing Table (432-320) or the table supplied as standard with the Orbis and Tornado manual torque testers. Stable clamping is achieved by two vertically-spaced jaws on one side, stacked above and below the single opposing jaw. The serrated rubber jaw faces make these accessories ideal for gripping low-friction specimen surfaces such as hard plastic or glass bottles.

Note: In situations where torque is significant, or specimens have an awkward shape or a smooth finish, it may be preferable to develop a custom gripping solution. If you are in any doubt please consult Mecmesin's experienced application engineers for advice.

PSV18155 V-jaw (toggle clamp)

PSV18221 V-jaw (screw-action clamp)

Dedicated mandrels for closures

Lower Fixing Tables (432-320 and 432-600) are often well-suited to holding containers. However, in situations where a thin-walled plastic closure is connected to a container, the closure can be deformed slightly when tightened within the jaws of an Upper Fixing Table. Such deformation can significantly influence the repeatability of torque measurement values.

A practical solution to this problem is to use a dedicated mandrel designed to fit uniformly and snugly around the closure without deforming it. The mandrel is designed to suit the exact form and profile of the closure thereby providing maximum contact area to optimise gripping.

Dedicated mandrels can be 'single-form' to suit one diameter, or 'split' to accommodate a limited range of diameters. Single-form mandrels are placed by hand onto the closure and are rotated by a 'Mandrel Peg Drive', which is connected to the torque sensor and applies tightening and release torque.

Split mandrels typically fit to an Upper Fixing Table and are gently tightened around the closure form to grip securely.

Single-form mandrels

These can be produced in metal by CNC machining or spark-eroding and are suitable for higher torque applications. Becoming increasingly common, as a lower cost alternative where torque values are not so high, are mandrels produced from a durable resin material by 3D printers.

Mecmesin offers both the metal and 3D resin types of single-form mandrel. Simply send us a sample or drawing of your closure to receive a quotation for the most appropriate mandrel.

Requires Mandrel Peg Drive.

Dedicated single-form mandrels for cork, plastic and metal closures

Mandrel Peg Drive (PDV15094-A)

This fixture is connected to the torque sensor of the Vortex or Helixa. It has 4 metal pegs with an internal opening of 54mm into which the single-form mandrel can be positioned. The pegs drive the mandrel and thereby apply the tightening and release torque.

Other sizes of Mandrel Peg Drive also available.

PDV15094-A Peg Drive fitted to

Vortex

Dedicated split mandrels for cork and plastic cosmetics jar closures

Split mandrels

These mandrels are designed to provide as much contact area around the closure as possible and are often rubber-coated to increase friction and grip securely. They are particularly suited to hard-plastic closures, such as those found on cosmetic jars, or other slippery surfaces e.g. cork. Each half-round mandrel is fitted to the running plate of an Upper Fixing Table and is gently tightened around the diameter of the closure.

Split mandrels can often be produced with a 'stepped' half-round design so you have a single fixture to suit closures of varying diameters.

To receive a quotation for the most appropriate mandrel simply send us a sample or drawing of your closure.

See separate datasheet for more details.

Set of 4 pegs; standard and extended lengths

Description

These pegs attach to the upper and lower fixing tables to keep samples secure during torque testing. The extended length pegs are to keep taller samples vertically aligned.

Applications

Used for closure torque testing of:

- Bottles
- Jars

Saddle Plates for use with Lower Fixing Table

Large Saddle Table (432-424)

Small Saddle Plate (432-407) shown fitted to the small Lower Fixing Table of the Tornado 1.5 N.m

Large Saddle Plate (432-424) shown fitted to the Vortex

Description

Saddle plates provide a flat stable base on which to mount awkwardly shaped bottles and containers. Particularly suitable for plastic bottles with an uneven base design e.g. the 'petaloid' base of carbonated soft drink bottles. They are used in conjunction with a Lower Fixing Table.

Once the saddle plate is affixed to the Lower Fixing Table the bottles or containers are held in place by standard (35 mm high) or extended (100 mm high) rubber-coated fixing pegs. Fixing Pegs are supplied as standard with all Lower Fixing Tables.

The small Saddle Plate (432-407) is designed for use with the small Lower Fixing Table supplied with the Tornado 1.5 N.m and 3 N.m.

The large Saddle Plate (432-424) is designed for use with the large Lower Fixing Table supplied with the Orbis and the Tornado 6 N.m and 10 N.m. It is also compatible with the Vortex Lower Fixing Table (432-320).

Specifications

Orbis and Tornado Mk II, and Vortex Torque Cell Check Calibration Rig

Checks gauge torque cells

Checks Vortex torque sensors

Mass Kit

Check rig components

Description

The check calibration rig is a bench-top unit which allows the on-site verification of the calibration status of Orbis MkII, Tornado MkII testers, and static torque sensors rated from 1.5 N.m to 10 N.m. Using dead-weight masses, the kit allows you to quickly decide whether or not adjustment, recalibration or repair is required. The kit does not replace the need for regular professional calibration.

Torque Reference Bottle

432-662-1.5

PDV12106

432-662-1.5 mounted on Vortex

Description

The Torque Reference Bottle (also known as 'Gold Bottle') provides a means of quickly verifying the calibration of motorised torque measuring systems Helixa and Vortex. Its magnetic clutch repeatedly slips at a factory-set, specified torque value. The Torque Reference Bottle is available in three nominal torque values—the part number-suffix indicates the value in N.m.

Specification

| Part No. | Available torque range | | Overall length | Diameter |
|-------------|---|--------|------------------------------|-----------------------------|
| | N.m | lbf.in | | |
| 432-662-0.5 | 0.5 | 4.4 | 163 mm (6.4 $\overline{1}$) | 93 mm (3.6 $\overline{6}$) |
| 432-662-1.0 | 1.0 | 8.9 | | |
| 432-662-1.5 | 1.5 | 13.3 | | |
| PDV12106 | Drive adapter for Torque Reference Bottle | | | |

The above settings are indicative only, values may vary slightly on the bottle provided.

Note: Reference Bottles with lower and higher torque values are also available – price on request.

Application

To use the Torque Reference Bottle, a separate drive adapter (part no PDV12106) can be ordered. This fits loosely between the pegs of an Upper Fixing Table and, when driven against the pegs by the motorised stand, it will apply torque to the magnetic clutch of the Reference Bottle causing it to slip at the pre-set value. The torque value displayed by the Vortex/Helixa sensor can then be compared to the calibrated pre-set value of the Reference Bottle.

The body of the Torque Reference Bottle can be held within the 4 pegs of a Lower Fixing Table.

Two verification certificates are provided as standard by Mecmesin for each Reference Bottle; one in N.m, the other in lbf.in units.

Torque value check on Helixa

◀ Reference Bottle Verification Reports; metric and imperial units

Radiused Probes 20
Rectangular Compression Plates 17
Reference Bottle 75
Rigid wire 50
Rotating Crimp Receptacle 33
Round Hooks 29
Rubber 35, 40, 41, 43, 45, 47
Rubber-faced 15, 63

S

Saddle plates 10, 75, 359
Scissor grips 37
Screw-action thin wire grips 42
Seat belts 36
Self-levelling compression plates 19
Sequin pull-off fixture 56
Single-action vice grip 41
Slippery or curved samples 15, 63
Slotted compression plates 18
Specialist tension fixtures 59
Spherically-seated 19
Split mandrels 73
Sprayed concrete 22
Spring-action vice clamp 40
Spring-loaded fold grip 35
Spring-loaded pinch grip 39
Springs 16, 19
Static Torque Sensor Bench Mounting Stands 73, 351
Sub-miniature components 40
Swivel test hooks 29

T

Tapes 32, 40, 41, 43, 44, 51
Tension 28
Tension and compression 60
Tension springs 29, 30
Test Stand Safety Guards 66
Textile attachment grips 56, 57, 58
Textile attachments 38
Textiles 29, 36, 40, 41, 42, 43, 44, 45, 47, 48
Thin metal sheets 43
Thin wires 34
Threads 35
Tissue 38, 40, 41, 57
Tissue and cotton yarns 40
Tissue strips 38
Toggle clamps 44
Torque 72
Torque Accessories 74, 75
Torque Chucks 73, 345, 346, 347
Torque Fixing Tables 353
Transit Case for Manual Handling/Ergonomic Kit 63
Trolley-Pushing Fixture 62

Trolleys 62
Tubes 21
Twines 35

U

Universal Expansion Module 64, 309
Universal Pneumatic Vice Grips 47, 232

V

V-blocks 10
Vented Compression Plates 18
Verification Check Rig 10, 55, 75
Vice grips: Double-action 44
Vice grips: Single-action 40, 41

W

Webbing grip 36
Wedge grips 49, 50, 57
Welded joints 50
Wheelie bins 62
Wire/Filament Grips 34
Wires 32, 33, 34, 44
Wood 23, 50
Wood Shear Test Jig 27
Woven fabrics 40, 41, 43, 44
Woven fibre strips 47
Woven yarn 38, 57

Y

Yarns 34, 35, 44

Mecmesin

testing to perfection

Mecmesin - a world leader in affordable force and torque testing solutions

Formed in 1977, Mecmesin Limited is today widely regarded as a leader in force and torque technology for quality control testing in design and production. The Mecmesin brand stands for excellent levels of performance and reliability, guaranteeing high quality results. Quality control managers, designers and engineers working on production lines and in research laboratories worldwide rely upon Mecmesin force & torque measurement systems for a range of quality control testing applications, which is almost limitless.
