Slim Type Linear Gage LGB

MANUAL No.4685(7) SERIES No.542 Bilingual J-E

PRECAUTIONS

In order to obtain the best possible performance and longest service life from your Linear Gage, please read this manual thoroughly prior to use. Be sure to observe the following precautions:

- Do not apply excessive force or bump when setting up and operating the Linear Gage.
- The Linear Gage has been accurately adjusted at the factory. Never attempt to disassemble it.
- To ensure measuring accuracy, do not use the Linear Gage in an environment where it may be subjected to sudden temperature
- When using the Linear Gage in conjunction with other instruments or equipment, an appropriate environment and operating conditions should be ensured for adequate performance.
- Use the Linear Gage as specified below, otherwise the rated function and performance may not be obtained.
- Have preventative safety measures in place to avoid damage should the Linear Gage malfunction.

Electromagnetic Compatibility (EMC)

This product complies with the EMC Directive. Note that in environments where electromagnetic interference exceeds EMC requirements defined in this directive, appropriate countermeasures are required to assure the product performance.

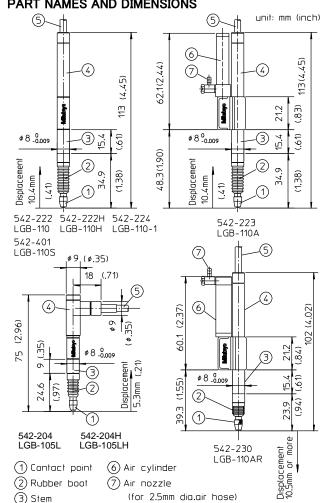

WARRANTY

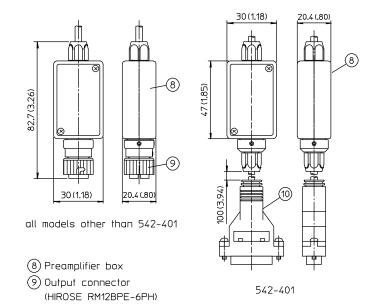

(4) Body

(5) Connecting cable

In the event that the Mitutoyo Linear Gage should prove defective in workmanship or material, within one year from the date of original purchase for use, it will be repaired or replace, at our option, free of charge upon its prepaid return to us.

1. PART NAMES AND DIMENSIONS

2. INSTALLING THE LINEAR GAGE

(10) Output connector

(D-sub)

Insert the stem into the hole of the gage mount or stand and clamp it with the screw. See the Linear Gage mount examples given below.

- Do not clamp the Linear Gage using excessive force. This may cause the spindle to stick.
- Do not mount the Linear Gage by clamping with a screw on
- Do not mount the Linear Gage at any portion other than the
- Mount the Linear Gage perpendicular to the surface to be measured. Otherwise, a measurement error will be produced as shown below.

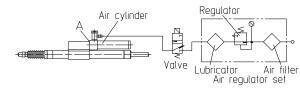

• Ensure that the gage body is not subjected to a force via the pull of the cable.

CONNECTING THE AIR HOSE(FOR 542-223, 542-230)

Connect the air hose as specified below:

- Air pressure: 0.3~0.4MPa(3~4kgf/cm²)
- Lubrication oil : Class 1 turbine oil(ISO VG32)

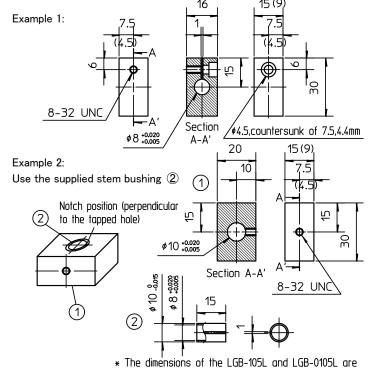

• Never hold the air cylinder when installing the gage. This may damage portion A. Be sure that portion A is not subjected to excessive force when connecting the air hose.

Mitutoyo

LINEAR GAGE MOUNT EXAMPLES

The recommended fastening torque is between 4.0kgf cm and 5.0kgf cm.

shown in parentheses.

3. CONNECTING THE COUNTER

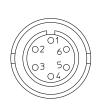

Couple the connector of the Linear Gage with the INPUT connector on the Linear Gage Counter. (Refer to the operation manual that came with the Linear Gage Counter for further details.)

To avoid malfunction due to electrical interference, do not place the cable of the Linear Gage near the power cord for other equipment.

4. OUTPUT SIGNAL SPECIFICATIONS

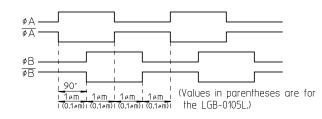

- 4-1. All models other than 542-401
- 1) Output connector: RM12BPE-6PH (Manufacturer: Hirose)
- 2) Connector pin assignment

Pin No.	Signal name
1	+5V*
2	φA
3	φB
4	$\overline{\phi}$ A
5	GND
6	$\overline{\phi} \overline{B}$

* Power supply to the Linear Gage(100mA) The ripple of the power source should be less than 200mV(p-p)

- 3) Output signal level: +5V (4.8V to 5.3V, 80mA)
- $\overline{\phi}$ A, ϕ A, $\overline{\phi}$ B, ϕ B, TTL output (equivalent to line driver SN75158)
- 4) Timing chart

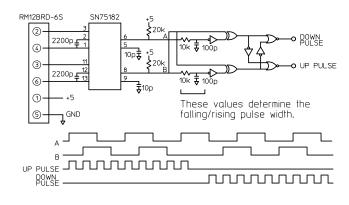

5) Receiving connector and receiver Connector (RM12BRD-6S, Hirose) Receiver (Equivalent to differential input line receiver SN75182)

6) Maximum cable length

20m (using an optional extension cable)

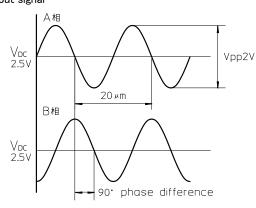

7) Basic circuitry for processing received signals

The following diagrams show the basic circuitry for processing the signals from the Linear Gage, and the waveforms of the output signals.

4-2. 542-401

1) Output signal

2) Output connector

• Receiving connector : DS-15S-N(JAE)

· Frame ground:

Connect to casting of output connector

Pin No.	Signal name	Pin No.	Signal name
1	0V	7	V_{DC}
2	0V	8	_
3	+5V±5%、70mA	9	— Alarm
4	+5V±5%、70mA	10~14	_
5	Phase A	15	Do not connect
6	Phase B		

5. REPLACING THE CONTACT POINT

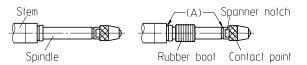

Hold the spindle at the notched portion using the supplied key spanner wrench. Put felt or a soft cloth on the contact point to protect it before removing with a pair of pliers. Then attach a new contact point.

- When replacing the contact point, firmly hold the spindle with the key spanner wrench. If torque is applied to the spindle, the internal mechanism of the Linear Gage may be damaged.
- Please be careful enough when handling the knife edge or blade type contact point, since there is a possibility of injury at exchange and use.

6. REPLACING THE RUBBER BOOT

① Remove the old rubber boot. Wipe off dust and oil from the grooves (A) with a cloth dampened with thinner.

- ② Push a new rubber boot over the spindle. The end with the larger diameter should be on the stem side.
- ③ Apply a small amount of silicone-type adhesive over the grooves (A). Do not allow any of the adhesive to contaminate the spindle; this may cause the spindle to stick.
- 4 Use a pair of tweezers to fit one end of the boot into the groove on the stem.
- ⑤ Stretch the boot with your fingers and fit the other end of the boot in the groove on the spindle.
- 6 Use a clean cloth to wipe off the excess adhesive.
- Note: The durability of the rubber boot varies depending on environmental conditions. If the rubber boot deteriorates too quickly, contact the nearest Mitutoyo sales office.

7. PROTECTION AGAINST DUST AND WATER

The dust and water resistance of the Linear Gage conforms to IP-54 (DIN40 050-1/IEC529 Specifications).

- The preamplifier and counter are not resistant to water. Do not use them in a place where they may be subjected to water or oil.
- If an extension cable is used, completely coat the connections on the cable and preamplifier with a sealant.
- If the insulating cover of the connecting cable is damaged, liquid may enter the Linear Gage, causing a malfunction.
 Have the damaged cable repaired immediately.
- Cutting chips may damage the rubber boot, reducing its resistance to dust and water. Replace the damaged rubber boot with a new one or have it repaired immediately.
- Some types of chemicals or coolants may corrode the rubber boot and rubber seals. If rubber parts deteriorate too quickly, contact the nearest Mitutoyo sales office.
- The Linear Gage is sealed and cannot be disassembled.
 Never attempt to disassemble it. Otherwise, seals may be damaged, deteriorating the performance of the Linear Gage.
