WaveTester / WaveSource 850/1300 Test Kit

Multimode Fiber Certification Test Kit

SKU: KIT-WT-WSMDxx (see connector options below)

Overview

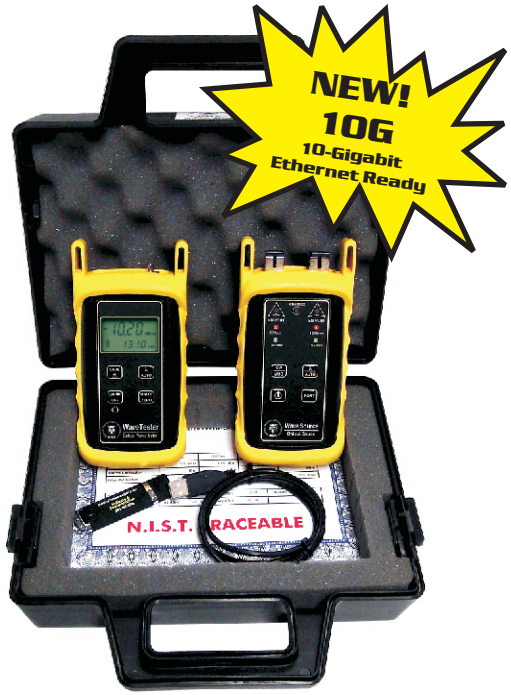
Many fiber optic network bids and Requests For Quote (RFQ) are citing cabling standards to specify the set of guidelines (such as fiber length) that the network installer must follow during the network installation. Adherence to such standards is meant to ensure the quality of the installation and guarantee that the network will perform as it was designed.

The process of testing a network installation to ensure its adherence to specified standards is called certification, and often requires hard-copy documentation as proof of adherence to standards.

The ***WaveTester / WaveSource 850/1300 Test Kit*** contains the tools necessary for certifying fiber optic links against a myriad of popular cabling standards in multimode networks.

The ***WaveTester optical power meter*** is multimode and singlemode ready, and can store reference values for all wavelengths used for optical loss measurements. Up to 200 fiber runs may be stored, and downloaded via a PC serial port for report generation using our OWL Reporter software.

The ***WaveSource 850/1300*** is a multimode light source. Its dual wavelength outputs (850 nm & 1300 nm) are temperature-stabilized for accurate measurements. Two connector options are available (ST or SC).



Features

Certification of multimode fiber links at 850 nm and 1300 nm

Auto-test functions store references and data points automatically

Data storage for up to 200 data points

USB interface for continuous data logging, report printing, or data downloading
