

JUST-A-STAND¹²¹⁶

“This is a solid product that I would recommend to other school districts that are 1:1 and are looking to provide students a location to charge devices. Mounts solid to the stand, conceals and secures the adapters within the stand. I would recommend this product to everyone in a 1:1 environment..”

Omro High School - Kevin Carley

fits Tower12, Tower12PLUS Tower16 & Tower16PLUS

WHY SCHOOLS LOVE TOWERS BY POWERGISTICS

STUDENT MANAGED

Taking the teachers out of device deployment, allows for more time teaching and less time dealing with the hassles that we have become accustomed to with traditional carts.

SPEED OF DEPLOYMENT

By allowing students to manage their own devices, we have been able to cut down deployment time to almost nothing. Classes can start when the bell rings allowing the charging and storage of devices to be a non issue.

OPEN CONCEPT

With the open concept of the Tower Series by PowerGistics, teachers and IT staff now have the ability to immediately see when the devices are missing or when the devices are not plugged in.

SECURITY

With the heavy steel door, and visual inventory the Towers Series by PowerGistics has maximized security while still retaining an open concept to visually track classroom devices.

QUALITY

Towers by PowerGistics are built with military grade aluminum and can handle the roudiest of students. The full aluminum construction allows for a light weight charging station and a natural heat sync to keep devices from over heating during the charging

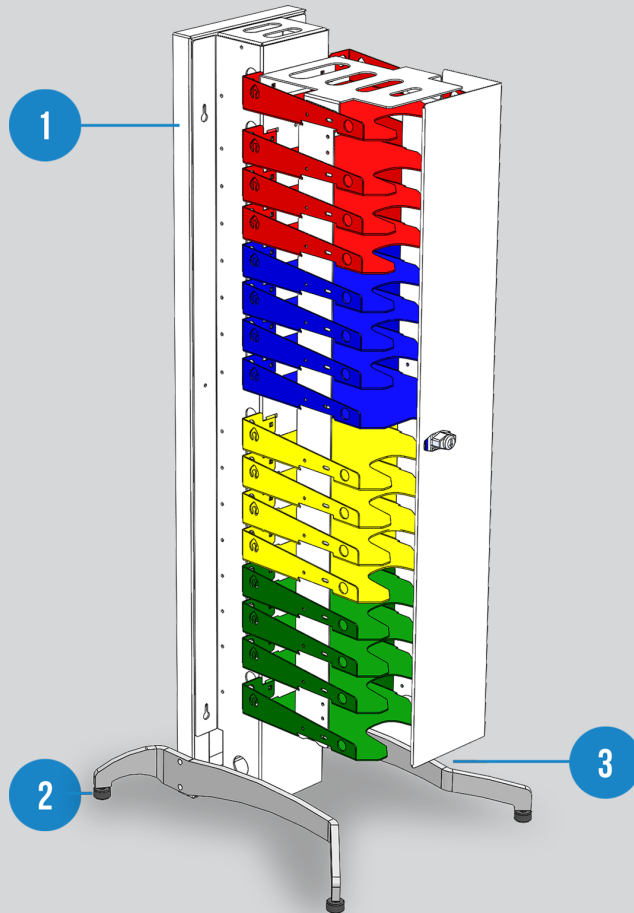

MADE IN THE USA

PowerGistics proudly engineers, manufactures and markets all of our products in the heart of Wisconsin. Domestic manufacturing allows PowerGistics to listen to our customers and make changes to enhance the educational experience, quickly.

KEY FEATURES

WHAT ARE TOWERS BY POWERGISTICS?

1 STEEL CONSTRUCTION

Built with steel supports, the Just-A-Stand was designed to handle a Tower full of devices.

2 ADJUSTABLE FEET

Keeping your Just-A-Stand level is important. With an inch of play, you can make sure your PowerGistics Tower stands straight and tall.

3 NARROW LEG SUPPORT

Keeping with the small footprint of the Towers by PowerGistics, the Just-A-Stand Legs steel angled feet allow for maximum stability within a small space.
