Definitions

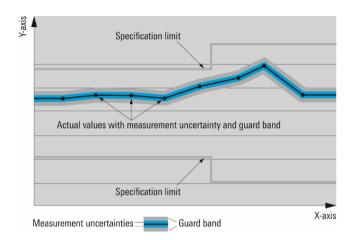

General

Product data applies under the following conditions:

- Three hours storage at ambient temperature followed by 30 minutes warm-up operation
- Specified environmental conditions met
- · Recommended calibration interval adhered to
- All internal automatic adjustments performed, if applicable

Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as $\langle , \leq , > , \geq , \pm \rangle$, or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with <, > or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

In line with the 3GPP/3GPP2 standard, chip rates are specified in million chips per second (Mcps), whereas bit rates and symbol rates are specified in billion bits per second (Gbps), million bits per second (Mbps), thousand bits per second (kbps), million symbols per second (Msps) or thousand symbols per second (ksps), and sample rates are specified in million samples per second (Msample/s). Gbps, Mcps, Mbps, Msps, ksps and Msample/s are not SI units.

Introduction

R&S®WinIQSIM2™ has been especially developed for easily generating digitally modulated signals. The graphical user interface allows intuitive operation, supported by context-sensitive help. By offering a convenient way to create any standard-conforming waveform with all the included standards and to generate multicarrier signals as well as multisegment waveforms, R&S®WinIQSIM2™ is suitable for a wide range of applications.

The signals generated with the aid of the R&S®WinIQSIM2™ software can be output by the R&S®AFQ100A and R&S®AFQ100B arbitrary waveform generators as well as by the R&S®SMW200A (R&S®SMW-B9/-B10 options), R&S®SMU200A (R&S®SMU-B9/-B10/-B11 options), R&S®SMJ100A (R&S®SMJ-B9/-B10/-B51/-B51) options), R&S®SMBV100A (R&S®SMJ-B9/-B10/-B51/-B51) options), R&S®SMBV100B, R&S®SMCV100B and R&S®SGT100A (R&S®SGT-K510 option) vector signal generators and the R&S®AMU200A baseband signal generator and fading simulator. Some standards also work for the R&S®CMW500/R&S®CMW100/R&S®CMW290 wideband radio communication tester, the R&S®CMW270 wireless connectivity tester, the R&S®CMA180 radio test set and the R&S®EX-IQ-Box digital signal interface module. R&S®WinIQSIM2™ can be downloaded from www.rohde-schwarz.com – search term: WinIQSIM2.

This document describes the capabilities of the R&S®WinIQSIM2™ software. Please note that additional hardware limitations of the used Rohde & Schwarz signal generator (especially maximum signal bandwidth, ARB memory size and maximum sample clock rate) apply. For instrument-specific data, see the data sheet of the respective Rohde & Schwarz instrument.

Key features

Large variety of digital standards

- 5G New Radio
- Verizon 5GTF signals
- OFDM signal generation
- LTE, incl. Rel. 8, Rel. 9, Rel. 10, Rel. 11, Rel. 12, Rel. 13, Rel. 14 and Rel. 15
- Cellular IoT (eMTC and NB-IoT), incl. Rel. 13, Rel. 14 and Rel. 15
- OneWeb reference signals and OneWeb user-defined signal generation
- GSM/EDGE
- · EDGE Evolution, VAMOS
- 3GPP FDD with HSDPA, HSUPA and HSPA+ (HSPA Evolution)
- CDMA2000[®] with 1xEV-DV
- 1xEV-DO Rev. A, Rev. B
- TD-SCDMA
- WLAN IEEE 802.11a/b/g/n/j/p/ac/ax/ad
- IEEE 802.16 WiMAX[™] supporting OFDM and OFDMA
- DVB-T/DVB-H
- DAB/T-DMB
- DVB-S2/DVB-S2X
- UWB (ECMA-368)
- GPS, GLONASS, Galileo, BeiDou (Compass), NavIC (IRNSS)
- Bluetooth®, up to release 5.1
- TETRA Release 2
- NFC A/B/F including EMV Type A/B ¹
- LoRa[®]

Additional systems in R&S®WinIQSIM2™

- Custom digital waveforms allow the generation of user-definable digital signals while offering user-selectable modulation parameters
- · Multicarrier CW signal generation
- · Multicarrier generation allows several digital signals to be combined to form one waveform with different frequency offsets
- Multisegment waveform function makes it possible to have multiple different waveforms in an arbitrary waveform generator's memory and ensures minimum transition times, while even seamless transitions are possible
- AWGN generation and addition to the signal
- Import function to import I/Q samples via a server connection into the R&S[®]WinIQSIM2™ signal generation chain where filtering
 can be performed and AWGN can be added

Extended graphics

- I and Q versus time
- Absolute value and phase versus time
- Vector diagram
- · Constellation diagram
- · FFT magnitude showing the spectrum of the signal
- Eye diagram of I and Q
- · Complementary cumulative distribution function (CCDF)

Convenient connections

- Waveform transmission via GPIB, USB and LAN
- · Waveforms can be locally stored on the PC; a USB memory stick can be used for data transmission
- Control of instruments via remote desktop connection via LAN

Version 15.00, September 2020

The following R&S°WinIQSIM2 $^{\text{TM}}$ options are supported for the R&S°SGT100A vector signal generator.

R&S®SGT-K240	GSM/EDGE
R&S®SGT-K241	EDGE Evolution
R&S®SGT-K242	3GPP FDD
R&S®SGT-K244	GPS (1 satellite)
R&S®SGT-K246	CDMA2000® incl. 1xEV-DV
R&S®SGT-K247	1xEV-DO Rev. A
R&S®SGT-K249	IEEE 802.16
R&S®SGT-K250	TD-SCDMA
R&S®SGT-K251	TD-SCDMA (3GPP TDD LCR) enhanced BS/MS test including HSDPA
R&S®SGT-K252	DVB-T/DVB-H
R&S®SGT-K253	DAB/T-DMB
R&S®SGT-K254	IEEE 802.11 a/b/g/n/j/p
R&S®SGT-K255	LTE Release 8
R&S®SGT-K260	Bluetooth® EDR/Low Energy
R&S®SGT-K261	Multicarrier CW signal generation
R&S®SGT-K262	AWGN
R&S®SGT-K266	Galileo (1 satellite)
R&S®SGT-K268	TETRA Release 2
R&S®SGT-K283	3GPP FDD HSPA/HSPA+, enhanced BS/MS test
R&S®SGT-K284	LTE Release 9
R&S®SGT-K285	LTE Release 10 (LTE-Advanced)
R&S®SGT-K286	IEEE 802.11ac `
R&S®SGT-K287	1xEV-DO Rev. B
R&S®SGT-K289	NFC A/B/F (incl. EMV Type A/B)
R&S®SGT-K294	GLONASS (1 satellite)
R&S®SGT-K298	Modernized GPS (1 satellite with L2C or L5)
R&S®SGT-K407	BeiDou (1 satellite)
R&S [®] SGT-K412	LTE Release 11
R&S [®] SGT-K413	LTE Release 12
R&S [®] SGT-K414	OFDM signal generation
R&S [®] SGT-K415	Cellular IoT Release 13
R&S [®] SGT-K416	DVB-S2/DVB-S2X
R&S [®] SGT-K417	Bluetooth® 5.x
R&S®SGT-K418	Verizon 5GTF
R&S [®] SGT-K419	LTE Release 13/14/15
R&S®SGT-K431	LoRa®
R&S®SGT-K442	IEEE 802.11ax
R&S®SGT-K443	Cellular IoT Release 14
R&S®SGT-K444	5G New Radio
R&S®SGT-K446	Cellular IoT Release 15

In the following the R&S $^{\otimes}$ SGT-Kyyy options are referred to as xxx-Kyyy, where yyy stands for the respective option number.

The following R&S®WinIQSIM2™ options are supported for the R&S®SMCV100B vector signal generator.

```
R&S®SMCVB-K240
                        GSM/FDGF
R&S®SMCVB-K241
                        EDGE Evolution
R&S®SMCVB-K242
                        3GPP FDD
R&S®SMCVB-K244
                        GPS (1 satellite)
R&S®SMCVB-K246
                        CDMA2000® incl. 1xEV-DV
R&S®SMCVB-K247
                        1xEV-DO Rev. A
R&S®SMCVB-K250
                        TD-SCDMA
R&S®SMCVB-K251
                        TD-SCDMA (3GPP TDD LCR) enhanced BS/MS test including HSDPA
R&S®SMCVB-K252
                        DVB-T/DVB-H
R&S®SMCVB-K253
                        DAB/T-DMB
R&S®SMCVB-K254
                        IEEE 802.11 a/b/g/n/j/p
R&S®SMCVB-K255
                        LTE Release 8
R&S®SMCVB-K260
                        Bluetooth® EDR/Low Energy
R&S®SMCVB-K261
                        Multicarrier CW signal generation
R&S®SMCVB-K262
                        AWGN
R&S®SMCVB-K266
                        Galileo (1 satellite)
                        3GPP FDD HSPA/HSPA+, enhanced BS/MS test
R&S®SMCVB-K283
R&S®SMCVB-K284
                        LTE Release 9
R&S®SMCVB-K285
                        LTE Release 10 (LTE-Advanced)
R&S®SMCVB-K286
                        IEEE 802.11ac
R&S®SMCVB-K287
                        1xEV-DO Rev. B
R&S®SMCVB-K289
                        NFC A/B/F (incl. EMV Type A/B)
R&S®SMCVB-K294
                        GLONASS (1 satellite)
R&S®SMCVB-K297
                        NavIC (IRNSS) (1 satellite)
R&S®SMCVB-K298
                        Modernized GPS (1 satellite)
R&S®SMCVB-K407
                        BeiDou (1 satellite)
R&S®SMCVB-K412
                        LTE Release 11
R&S®SMCVB-K413
                        LTE Release 12
R&S®SMCVB-K414
                        OFDM signal generation
R&S®SMCVB-K415
                        Cellular IoT Release 13
R&S®SMCVB-K416
                        DVB-S2/DVB-S2X
R&S®SMCVB-K417
                        Bluetooth® 5.x
R&S®SMCVB-K418
                        Verizon 5GTF
R&S®SMCVB-K419
                        LTE Release 13/14/15
R&S®SMCVB-K431
                        LoRa®
R&S®SMCVB-K432
                        Modernized Beidou (1 satellite)
R&S®SMCVB-K442
                        IEEE 802.11ax
R&S®SMCVB-K443
                        Cellular IoT Release 14
R&S®SMCVB-K444
                        5G New Radio
R&S®SMCVB-K446
                        Cellular IoT Release 15
```

In the following the R&S®SMCVB-Kyyy options are referred to as xxx-Kyyy, where yyy stands for the respective option number.

A subset of R&S®WinIQSIM2™ options is available for the R&S®EX-IQ-Box if the options for the CPRI™ digital interface standard (R&S®EXBOX-K10/K11 and R&S®EXBOX-K90) are also installed.

R&S®EXBOXK285 LTE Release 10 (LTE-Advanced) R&S®EXBOXK286 IEEE 802.11ac	R&S®EXBOXK254 IEEE 802.11n (incl R&S®EXBOXK255 LTE Release 8 R&S®EXBOXK259 3GPP FDD HSPA- R&S®EXBOXK284 LTE Release 9 R&S®EXBOXK285 LTE Release 10 (L	1xEV-DV P TDD LCR) enhanced BS/MS test including HSDPA luding a/b/g/n/j/p) +
-------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------

In the following the R&S®EXBOXKyyy options are referred to as xxx-Kyyy, where yyy stands for the respective option number.

A subset of R&S®WinIQSIM2™ options is supported for the R&S®CMW500 and R&S®CMW100.

R&S®CMW-KW010
R&S®CMW-KW200
GSM/EDGE (same feature set as xxx-K240)
R&S®CMW-KW201
EDGE Evolution (same feature set as xxx-K241)
LTE NB-IoT (NB-IoT feature set as xxx-K415)
R&S®CMW-KW400
WCDMA (same feature set as xxx-K242)
R&S®CMW-KW401
HSDPA (same feature set as xxx-K243)
R&S®CMW-KW402
HSUPA (same feature set as xxx-K245)

R&S®CMW-KW403 WCDMA Release 7 HSPA+ (same feature set as xxx-K259)

R&S®CMW-KW500 LTE (same feature set as xxx-K255) R&S®CMW-KW502 LTE R10 (same feature set as xxx-K285) R&S®CMW-KW504 LTE R12 (same feature set as xxx-K413) R&S®CMW-KW514 LTE R13 LAA (LAA features set of xxx-K419) R&S®CMW-KW570 LTE R14 C-V2X (V2X feature set of xxx-K419) R&S®CMW-KW590 LTE MTC (eMTC feature set of xxx-K415) R&S®CMW-KW6000 5G NR (same feature set as xxx-K444) R&S®CMW-KW610 Bluetooth® (same feature set as xxx-K260)

R&S®CMW-KW620 GPS (1 satellite, same feature set as xxx-K244 and xxx-K298)
R&S®CMW-KW621 GLONASS (1 satellite, same feature set as xxx-K294)
R&S®CMW-KW622 Galileo (1 satellite, same feature set as xxx-K266)
R&S®CMW-KW623 BeiDou (1 satellite, same feature set as xxx-K407)

R&S®CMW-KW630 DVB (same feature set as xxx-K252) R&S®CMW-KW632 DAB (same feature set as xxx-K253)

R&S®CMW-KW650 WLAN IEEE 802.11a/b/g/n/j/p (same feature set as xxx-K254)
R&S®CMW-KW656 WLAN IEEE 802.11ac (same feature set as xxx-K286)
R&S®CMW-KW657 WLAN IEEE 802.11ax (same feature set as xxx-K442)

R&S®CMW-KW683 LoRa® (same feature set as xxx-K431)
R&S®CMW-KW750 TD-SCDMA (same feature set as xxx-K250)

R&S®CMW-KW751 TD-SCDMA enhanced (same feature set as xxx-K251)

R&S®CMW-KW800 CDMA2000® (same feature set as xxx-K246) R&S®CMW-KW880 1xEV-DO Rev. A (same feature set as xxx-K247)

A subset of R&S®WinIQSIM2™ options is supported for the R&S®CMW290.

R&S®CMW-KW010

R&S®CMW-KW200

R&S®CMW-KW201

R&S®CMW-KW201

R&S®CMW-KW400

R&S®CMW-KW401

R&S®CMW-KW401

R&S®CMW-KW402

HSDPA (same feature set as xxx-K243)

HSUPA (same feature set as xxx-K245)

R&S®CMW-KW403 WCDMA Release 7 HSPA+ (same feature set as xxx-K259)

R&S®CMW-KW500 LTE (same feature set as xxx-K255) R&S®CMW-KW610 Bluetooth® (same feature set as xxx-K260)

R&S®CMW-KW620 GPS (1 satellite, same feature set as xxx-K244 and xxx-K298)
R&S®CMW-KW621 GLONASS (1 satellite, same feature set as xxx-K294)
R&S®CMW-KW622 Galileo (1 satellite, same feature set as xxx-K266)
R&S®CMW-KW623 BeiDou (1 satellite, same feature set as xxx-K407)

R&S®CMW-KW630 DVB (same feature set as xxx-K252)

R&S[®]CMW-KW650 WLAN IEEE 802.11a/b/g/n/j/p (same feature set as xxx-K254) R&S[®]CMW-KW656 WLAN IEEE 802.11ac (same feature set as xxx-K286)

R&S®CMW-KW657 WLAN IEEE 802.11ax (same feature set as xxx-K442) R&S®CMW-KW750 TD-SCDMA (same feature set as xxx-K250)

R&S®CMW-KW751 TD-SCDMA enhanced (same feature set as xxx-K251)

R&S®CMW-KW800 CDMA2000® (same feature set as xxx-K246) R&S®CMW-KW880 1xEV-DO Rev. A (same feature set as xxx-K247) A subset of R&S[®]WinIQSIM2[™] options is supported for the R&S[®]CMW270.

R&S®CMW-KW010 AWGN (same feature set as xxx-K262)
R&S®CMW-KW610 Bluetooth® (same feature set as xxx-K260)

R&S®CMW-KW620 GPS (1 satellite, same feature set as xxx-K244 and xxx-K298)

R&S®CMW-KW621 GLONASS (1 satellite, same feature set as xxx-K294)
R&S®CMW-KW622 Galileo (1 satellite, same feature set as xxx-K266)
R&S®CMW-KW623 BeiDou (1 satellite, same feature set as xxx-K407)

R&S®CMW-KW630 DVB (same feature set as xxx-K252)

R&S®CMW-KW650 WLAN IEEE 802.11a/b/g/n/j/p (same feature set as xxx-K254)
R&S®CMW-KW656 WLAN IEEE 802.11ac (same feature set as xxx-K286)
R&S®CMW-KW657 WLAN IEEE 802.11ax (same feature set as xxx-K442)

R&S®CMW-KW683 LoRa® (same feature set as xxx-K431)

A subset of R&S[®]WinIQSIM2[™] options is supported for the R&S[®]CMA180.

R&S®CMA-KW620 GPS-Test (1 satellite, same feature set as xxx-K244 and xxx-K298)
R&S®CMA-KW621 GLONASS-Test (1 satellite, same feature set as xxx-K294)

R&S®CMA-KW622 Galileo-Test (1 satellite, same feature set as xxx-K266)

R&S®CMA-KW668 Tetra Release 2 (same feature set as xxx-K268)

Specifications

I/Q baseband generator

Types of modulation	ASK	
	modulation index	0 % to 100 %
	resolution	0.1 %
	FSK	2FSK, 4FSK, MSK
	deviation	0.1 to 1.5 \times f _{sym}
	maximum	10 MHz
	resolution	< 0.1 Hz
	setting uncertainty	< 0.5 %
	variable FSK	4FSK, 8FSK, 16FSK
	deviations	$-1.5 \times f_{\text{sym}}$ to $+1.5 \times f_{\text{sym}}$
	maximum	10 MHz
	resolution	< 0.1 Hz
	PSK	BPSK, QPSK,
		QPSK 45° offset, QPSK EDGE, AQPSK, OQPSK, π/4-QPSK, π/2-DBPSK,
		π/4-DQPSK, π/8-D8PSK, 8PSK, 8PSK EDGE
	QAM	16QAM, 16QAM EDGE, 32QAM, 32QAM EDGE, 64QAM, 128QAM, 256QAM, 1024QAM
Coding	Not all coding methods can be used with	off, differential, diff. phase,
	every type of modulation.	diff. + gray, gray, GSM, NADC, PDC, PHS, TETRA, APCO25 (PSK), APCO25(FSK), APCO25(8PSK), PWT, TFTS/TETRA, INMARSAT, VDL, ICO, CDMA2000®, WCDMA
Baseband filter	Any filter can be used with any type of mod	
	signal depends on the instrument for which	the waveform is generated; the signal is
	clipped if the bandwidth is exceeded.	
	oversampling	2 to 32
	impulse length	1 to 128
	cosine, root cosine	
	filter parameter α	0.05 to 1.00
	Gaussian	
	filter parameter B x T	0.15 to 2.50
	EDGE narrow pulse shape	
	EDGE wide pulse shape	
	cdmaOne, cdmaOne + equalizer	
	cdmaOne 705 kHz	
	cdmaOne 705 kHz + equalizer	
	CDMA2000® 3X	
	EUTRA/LTE	
	APCO25 C4FM	
	rolloff factor	0.05 to 0.99
	APCO25 (H-CPM)	
	APCO25 (LSM)	
	Gauss cutoff frequency	400 Hz to 25 MHz
	lowpass cutoff frequency	400 Hz to 25 MHz
	rectangular	
	split phase	
	filter parameter B × T	0.15 to 2.5
	lowpass (ACP optimized)	
	cutoff frequency factor	0.05 to 2.00
	lowpass (EVM optimized)	
	cutoff frequency factor	0.05 to 2.00
	dirac	(= no filter, only oversampling)
	resolution of filter parameter	0.01
	resolution of filter parameter	
Symbol rate	The symbol rate depends on the selected i	nstrument.
Symbol rate		nstrument. ximum symbol rate is 60 Msps for linear

Data sources	Allo, All1	
	PRBS	9, 11, 15, 16, 20, 21, 23
	sequence length	1 bit to 64 bit
	pattern	
	length	1 bit to 64 bit
	data lists	8 bit to 2 Gbit
Marker outputs	number	4
	operating modes	control list, restart, pulse, pattern, ratio
Level reduction	setting range	0 dB to +60 dB
Burst	operating range	max. 5 MHz
	rise/fall time	
	setting range	0.5 symbol to 16 symbol
	resolution	0.1 symbol
	ramp shape	cosine, linear
Predefined settings	modulation, filter, symbol rate and coding i	n line with standard
	standards	APCO phase 1 (C4FM, CQPSK, LSM, WCQPSK), APCO phase 2 (H-CPM, H-DQPSK, H-D8PSK wide, H-D8PSK narrow), Bluetooth®, DECT, ETC, GSM, GSM EDGE, NADC, PDC, PHS, TETRA, TFTS, WCDMA 3GPP, TD-SCDMA, CDMA2000® forward, CDMA2000® reverse, worldspace
Multisegment waveform	number of segments	depending on instrument
Multicarrier waveform	number of carriers	max. 512
	mode	equidistant carrier spacing, arbitrary carrier frequency
	total RF bandwidth	depending on instrument
	crest factor modes	maximize, minimize, off
	clipping	on (with specification of target crest factor
		and filter cutoff frequency), off
	signal period modes in equidistant carrier spacing mode	longest file, shortest file, user (max. 1 s)
	single carrier gain	-80 dB to 0 dB
	single carrier start phase	0° to 360°
	single carrier delay	0 s to 1 s

Digital modulation systems

The specified data applies together with the parameters of the relevant standard.

Note that the given parameter ranges may be additionally restricted due to inter-parameter dependencies.

5G New Radio (xxx-K444 or R&S®CMW-KW6000 option)

3GPP 5G NR digital standard		in line with the following versions of the 3GPP Release 15 specifications: TS 38.211 15.4.0 TS 38.212 15.4.0 TS 38.213 15.4.0
Note that the given parameter ranges may	, he additionally restricted due to inter parame	• TS 38.214 15.4.0
General settings	be additionally restricted due to inter-parame	eter dependencies.
Sequence length		can be entered in frames (10 ms each);
Coquence longar		the maximum length depends on the ARB size of the corresponding Rohde & Schwarz signal generator and the configured 5G NR settings, e.g. the channel bandwidth.
Filter mode		channel BW, per BWP, off
Suppress subcarrier on output carrier		on/off
Link direction		downlink, uplink
Node settings		
Number of carriers		1 to 16
RF phase compensation		on/off
Cell indicator	per carrier	0 to 15
Cell ID	per carrier	0 to 1007
Deployment	per carrier	f ≤ 3 GHz
	·	3 GHz < f ≤ 6 GHz
		f > 6 GHz
Frequency	per carrier	0 to 44 GHz
Channel bandwidth	per carrier,	5 MHz, 10 MHz, 15 MHz, 20 MHz,
	note that the resulting signal sample rate	25 MHz, 30 MHz, 40 MHz, 50 MHz,
	does not only depend on the configured	60 MHz, 70 MHz, 80 MHz, 90 MHz,
	channel bandwidth but also on other	100 MHz, 200 MHz, 400 MHz
	5G NR settings.	,
DMRS type A position	per carrier	2, 3
SUL	per carrier	on/off
Point A to carrier center	per carrier	frequency in the lower half of the channel bandwidth
Use 15 kHz SCS	per carrier	on/off
Use 30 kHz SCS	per carrier	on/off
Use 60 kHz SCS	per carrier	on/off
Use 120 kHz SCS	per carrier	on/off
TX bandwidth offset/RB 15 kHz SCSs	per carrier	0 to 9
TX bandwidth offset/RB 30 kHz SCSs	per carrier	0 to 9
TX bandwidth offset/RB 60 kHz SCSs	per carrier	0 to 9
TX bandwidth offset/RB 120 kHz SCSs	per carrier	0 to 9
Number of SS/PBCH patterns	per carrier	1 to 4
SS/PBCH offset relative to	per carrier	TX BW, point A
SS/PBCH subcarrier spacing	per carrier and per SS/PBCH pattern	15 kHz, 30 kHz, 120 kHz, 240 kHz
SS/PBCH RB offset and SC offset	per carrier and per SS/PBCH pattern	in the channel bandwidth
SS/PBCH case	per carrier and per SS/PBCH pattern	A, B, C, D, E
SS/PBCH L	per carrier and per SS/PBCH pattern	4, 8, 64
SS/PBCH positions	per carrier and per SS/PBCH pattern	pattern of 0 or 1
SS/PBCH burst set periodicity	per carrier and per SS/PBCH pattern	5 ms, 10 ms, 20 ms, 40 ms, 80 ms, 160 ms
PSS power	per carrier and per SS/PBCH pattern	-80 dB to +10 dB
SSS power	per carrier and per SS/PBCH pattern	-80 dB to +10 dB
PBCH power	per carrier and per SS/PBCH pattern	-80 dB to +10 dB
PBCH dummy content for MIB	per carrier and per SS/PBCH pattern	off (MIB), on (dummy)
MIB content	per carrier and per SS/PBCH pattern	as of 3GPP TS 38.331
PBCH channel coding	per carrier and per SS/PBCH pattern	on/off
PBCH data source	per carrier and per SS/PBCH pattern	Allo, All1, pattern, PNx (length: 1 bit to 64 bit) and data list

Dummy RE state	per carrier	on/off
Dummy RE power	per carrier	-80 dB to +10 dB
Dummy RE subcarrier spacing	per carrier	15 kHz, 30 kHz, 60 kHz, 120 kHz, 240 kHz
Dummy RE modulation	per carrier	BPSK, π/2-BPSK, QPSK, 16QAM, 64QAM, 256QAM
Dummy RE slot format	per carrier	0 to 1
Dummy RE transform precoding	per carrier	on/off
Dummy RE data source	per carrier	All0, All1, pattern, PNx (length: 1 bit to 64 bit) and data list
Users/BWP settings		
Number of users		1 to 10
UE ID	per user	0 to 65535
DSCH/USCH channel coding	per user	on/off
PDSCH data source	per user	Allo, All1, pattern, PNx (length: 1 bit to 64 bit) and data list
Number of DL BWPs	per user and per carrier	1 to 4
Number of UL BWPs	per user and per carrier	0 to 4
BWP indicator	per user and per carrier and per BWP	0 to 3
BWP subcarrier spacing	per user and per carrier and per BWP	15 kHz, 30 kHz, 60 kHz, 120 kHz
BWP number of RBs	per user and per carrier and per BWP	in the transmission bandwidth of the respective numerology
BWP RB offset in TX BW	per user and per carrier and per BWP	in the transmission bandwidth of the respective numerology
PDSCH/PUSCH: DMRS configuration type	per user and per carrier and per BWP per DMRS set (DL and UL)	1, 2
PDSCH/PUSCH: DMRS additional position index	per user and per carrier and per BWP per DMRS set (DL and UL)	0 to 3
PDSCH/PUSCH: DMRS maximum length	per user and per carrier and per BWP per DMRS set (DL and UL)	1, 2
PDSCH/PUSCH: use scrambling ID	per user and per carrier and per BWP	on/off
PDSCH/PUSCH: data scrambling ID	per user and per carrier and per BWP	0 to 1023
PDSCH/PUSCH: maximum number of codewords per DCI	per user and per carrier and per BWP	1, 2
PDSCH/PUSCH: VRB-to-PRB interleaver	per user and per carrier and per BWP	non-interleaved
PDSCH/PUSCH: MCS table	per user and per carrier and per BWP	64QAM, 256QAM, 64QAM LowSE
PDSCH/PUSCH: resource allocation	per user and per carrier and per BWP	type 1
PUCCH: additional DMRS	per user and per carrier and per BWP	on/off
PUCCH: π/2-BPSK	per user and per carrier and per BWP	on/off
PUCCH: simultaneous HARQ-ACK-CSI	per user and per carrier and per BWP	off
PUSCH: transform precoding	per user and per carrier and per BWP	on/off
PUSCH: maximum rank	per user and per carrier and per BWP	1 to 4
PUSCH: TX config	per user and per carrier and per BWP	non-codebook, codebook
PUSCH: codebook subset	per user and per carrier and per BWP	fully and partial and non-coherent,partial and non-coherent,non-coherent
PUSCH: MCS table (TP)	per user and per carrier and per BWP	64QAM, 256QAM, 64QAM LowSE
PUSCH UCI: state	per user and per carrier and per BWP	on/off
PUSCH UCI: mode	per user and per carrier and per BWP	UCI only, UCI+UL-SCH
PUSCH UCI: scaling alpha	per user and per carrier and per BWP	0.5, 0.65, 0.8, 1.0
PUSCH UCI: I_HARQ_offset 0/1/2	per user and per carrier and per BWP	0 to 15
PUSCH UCI: I_CSI1_offset 0/1	per user and per carrier and per BWP	0 to 18
PUSCH UCI: I_CSI2_offset 0/1	per user and per carrier and per BWP	0 to 18
Scheduling settings	1, 22 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2,	-
Number of allocations	per carrier and per subframe and per BWP	0 to 64
Content	per carrier and per subframe and per BWP and per allocation	CORESET, PDSCH, PUSCH, PRACH, PUCCH

LTE Release 8 (xxx-K255 or R&S®CMW-KW500 option)

EUTRA/LTE digital standard		in line with 3GPP Release 8: TS 36.211 v.15.6.0, TS 36.212 v.15.6.0, TS 36.213 v.15.6.0	
General settings		10 00:2:0 11:0:0:0	
Sequence length	sequence length can be entered in frames (10 ms each); max. length depending on channel bandwidth, oversampling and ARB size of the corresponding Rohde & Schwarz signal generator.		
	64 Msample: 109 (20 MHz bandwidth 128 Msample: 218 (20 MHz bandwidth	n) to 436 (1.4 MHz bandwidth) frames n) to 1747 (1.4 MHz bandwidth) frames n) to 3495 (1.4 MHz bandwidth) frames n) to 27962 (1.4 MHz bandwidth) frames	
Mode	restricts the user interface to certain LTE/cellular IoT features for simplicity or enables access to all features according to the installed options		
Baseband filter	EUTRA/LTE filter with different optimization modes	best EVM, best ACP, best ACP (narrow), best EVM (no upsampling); for some LTE configurations, the filter is configured automatically	
	other	see data sheet of respective Rohde & Schwarz instrument, "I/Q baseband generator" section	
Clipping	setting of clipping value relative to highest placeband filtering; clipping reduces the cre	peak in percent; clipping takes place prior to st factor	
	modes clipping level	vector i + j q scalar i , q 1 % to 100 %	
Duplexing	clipping level	FDD, TDD	
Link direction		downlink, uplink	
Physical layer mode	fixed value; depends on selected link direct uplink	fixed value; depends on selected link direction: OFDMA in downlink, SC-FDMA in	
EUTRA test models (downlink)	in line with 3GPP TS 36.141 v.8.12.0 both FDD and TDD E-TMs are supported	E-TM1.1, E-TM1.2, E-TM2, E-TM3.1, E-TM3.2, E-TM3.3	
Physical settings			
Channel bandwidth	determines the channel bandwidth used	1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz, user-defined	
FFT size	The FFT size (128, 256, 512, 1024, 2048) i selected number of occupied subcarriers. F can be selected.	s user-selectable if it is larger than the For 15 MHz bandwidth, an FFT size of 1536	
Sampling rate	The sampling rate is automatically set in lin	e with the selected channel bandwidth.	
Number of occupied subcarriers	The number of occupied subcarriers is autochannel bandwidth.	omatically set in line with the selected	
Number of left guard subcarriers	The number of left guard carriers is automa	atically set in line with the selected FFT size.	
Number of right guard subcarriers	The number of right guard carriers is autom size.	The number of right guard carriers is automatically set in line with the selected FFT	
Number of resource blocks		The number of resource blocks is automatically set in line with the selected channel bandwidth and physical resource block bandwidth.	
Cell-specific settings			
Physical cell ID group	determines cell ID together with physical layer ID	0 to 167	
Physical layer ID	determines cell ID together with physical cell ID group	0 to 2	
TDD special subframe configuration	only selectable if duplexing mode is set to TDD	0 to 8	
TDD uplink/downlink configuration	only selectable if duplexing mode is set to TDD	0 to 6	
Cyclic prefix	determines whether a normal or extended cyclic prefix is used for the subframes Note: It automatically determines the number of symbols per subframe.	normal, extended, user-defined	

Additional cell-specific settings in down		
PDSCH ratio P_B/P_A	sets the energy per resource element ratio between OFDM symbols containing a reference signal and those not containing one for PDSCH	selectable values in line with TS 36.213
PDCCH ratio P_B/P_A	sets the energy per resource element ratio between OFDMA symbols containing a reference signal and those not containing one for PDCCH	-10 dB to +10 dB in steps of 0.01 dB
PBCH ratio P_B/P_A	sets the energy per resource element ratio between OFDMA symbols containing a reference signal and those not containing one for PBCH	-10 dB to +10 dB in steps of 0.01 dB
PHICH duration		normal, extended
PHICH N_g		1/6, 1/2, 1, 2, custom
MIMO		
Global MIMO configuration	simulated cell-specific antenna configuration	1, 2, 4 transmit antennas, SISO+BF
Simulated antenna	simulated antenna	antenna 1, 2, 3, 4
Downlink reference signal structure		
Reference symbol power	power of reference symbol	-80 dB to +10 dB in steps of 0.01 dB
Synchronization signal settings		
P-/S-SYNC TX antenna	determines the antenna(s) from which the SYNC signal is transmitted	all, antenna 1, 2, 3, 4
P-SYNC power	determines the power of the primary synchronization signal	-80 dB to +10 dB in steps of 0.01 dB
S-SYNC power Resource allocation downlink	determines the power of the secondary synchronization signal	-80 dB to +10 dB in steps of 0.01 dB
Number of configurable subframes	determines the number of configurable subframes; the subframe configurations are used periodically Note: P/S-SYNC and PBCH are configured globally and therefore not copied here. The use of this function ensures a valid frame configuration.	up to 40 subframes The actual range depends on the duple: mode, on the sequence length and – in the case of TDD – on the UL/DL configuration.
Behavior in unscheduled resource blocks	determines whether unscheduled resource blocks and subframes are filled with dummy data or left DTX	dummy data, DTX
Cyclic prefix	determines whether a normal or extended cyclic prefix is used for a specific subframe Note: It automatically determines the number of OFDMA symbols per subframe.	normal, extended Note: The cyclic prefix type can be set here only if the cyclic prefix type in the general settings dialog is set to user-defined.
Number of allocations used	determines the number of scheduled allocations in the selected subframe	up to 60
Allocation table		
Codeword	up to 2 codewords can be configured for MIMO	1/1, 1/2, 2/2
Modulation	determines modulation scheme used	QPSK, 16QAM, 64QAM
VRB gap	generates VRBs of localized and distributed type	0 (localized), 1, 2
Number of resource blocks (RB)	defines size of selected allocation in terms of resource blocks	1 to total number of RBs
Number of symbols	defines size of selected allocation in terms of OFDM symbols	1 to number of OFDM symbols per subframe
Offset RB	defines start resource block of selected allocation Note: This value is read-only if auto mode is activated for selected allocation.	0 to total number of RBs – 1
Offset symbol	defines start OFDM symbol of allocation	0 to number of OFDM symbols per subframe – 1
Data source	determines data source of selected allocation Note: Data sources for users 0 to 3 can be configured in the Configure User panel.	All0, All1, pattern, PNx, data list, user 0, user 1, user 2 and user 3

Power	determines power of selected allocation	-80 dB to +10 dB in steps of 0.01 dB
Content type	determines type of selected allocation	PDSCH, PDCCH, PBCH
State	sets state of selected allocation	on/off
Enhanced settings PBCH		
Scrambling state		on/off
Channel coding state	enables channel coding (FEC)	on/off
MIB (including SFN)	activates the automatic MIB generation for	on/off
` · · · · · · · · · · · · · · · · · · ·	the PBCH	
SFN offset	sets the starting system frame number encoded in the MIB	0 to 1020 in steps of 4
MIB spare bits	sets the MIB spare bits	pattern of 10 bit
Transport block size		1 to 100000
Enhanced settings PDSCH		
Precoding scheme	sets multi-antenna mode for selected allocation Note: The available selection depends on the global MIMO configuration.	none, transmit diversity, spatial multiplexing, TX mode 7
Number of layers	The available selection depends on the global MIMO configuration.	1 to 4
Codebook index	The available selection depends on the global MIMO configuration.	0 to 15
Cyclic delay diversity	The available selection depends on the	no CDD, large delay
	global MIMO configuration.	
Scrambling state		on/off
UE ID/n_RNTI	user equipment identifier (n_RNTI) for selected allocation	0 to 65535
Channel coding state	enables channel coding (FEC)	on/off
Transport block size		1 to 100000
Redundancy version index		0 to 3
IR soft buffer size		800 to 304000
Configuration of PCFICH, PHICH, PDCCH	4	000 10 00 1000
State	enables PCFICH, PHICH, PDCCH	on/off
Precoding scheme	sets multi-antenna mode for PCFICH,	transmit diversity
Treesdaing sorieme	PHICH and PDCCH Note: The available selection depends on the global MIMO configuration.	transmit diversity
PCFICH power	determines power of PCFICH	-80 dB to +10 dB in steps of 0.01 dB
PCFICH scrambling state	determines power or 1 or 1011	on/off
Control region for PDCCH		1 to 4 OFDM symbols
PHICH power	determines power of a single PHICH symbol	-80 dB to +10 dB in steps of 0.01 dB
Number of PHICH groups	Symbol	0 to 112
ACK/NACK pattern	can be set individually for each PHICH	0, 1, – (up to 8 values)
PDCCH power	determines newer of BDCCH	00 dD to 140 dD in atoms of 0.04 dD
PDCCH power	determines power of PDCCH	-80 dB to +10 dB in steps of 0.01 dB
PDCCH scrambling state PDCCH format	PDCCH format –1 is Rohde & Schwarz signal generator's proprietary format for legacy support; PDCCH format variable allows flexible configuration of DCIs	on/off -1 to 3, variable
Number of PDCCHs		depends on selected PDCCH format
Data source PDCCH	determines data source of PDCCH	
Data source PDCCH DCI format	determines data source of PDCCH can be individually mapped to CCEs	All0, All1, pattern, PNx and data list
DCI format		
	can be individually mapped to CCEs The "Configure user" dialog makes it possib 4 scheduled users that can be distributed on the data source of a specific allocation in the allocations that are not adjacent or allocatio	All0, All1, pattern, PNx and data list 0, 1, 1a, 1b, 1c, 1d, 2, 2a, 3, 3a le to define and configure up to ver the entire frame configuration by setting e allocation table to user. DCI format Configure user Transmission mode	can be individually mapped to CCEs The "Configure user" dialog makes it possib 4 scheduled users that can be distributed on the data source of a specific allocation in the allocations that are not adjacent or allocatio configured to allow the use of a common da selects the downlink transmission mode enables scrambling for all allocations	All0, All1, pattern, PNx and data list 0, 1, 1a, 1b, 1c, 1d, 2, 2a, 3, 3a le to define and configure up to ver the entire frame configuration by setting e allocation table to user. Subframe ns of a different subframe can be ta source. user, mode 1 to mode 7

Data source	determines data source of user currently being configured	All0, All1, pattern, PNx and data list
Configure dummy data	1	
Dummy data modulation		QPSK, 16QAM, 64QAM
Dummy data source		All0, All1, pattern, PNx and data list
Dummy data power	determines power of dummy data allocations	-80 dB to +10 dB in steps of 0.01 dB
Uplink simulation		
Additional cell-specific settings in upli		
Group hopping	activates reference signal group hopping while deactivating sequence hopping	on/off
Sequence hopping	only selectable if group hopping is deactivated	on/off
Delta sequence shift for PUSCH n(1)_DMRS	sets the broadcast part of the DMRS index	0 to 29 0 to 11
Enable n_PRS		on/off
PRACH configuration		1 to 63
Restricted set		on/off
Uplink frequency hopping mode		intra-SF, inter-SF
PUSCH hopping offset		0 to total number of RBs – 2
Number of subbands		1 to 4
Number of RBs used for PUCCH		0 to total number of RBs
Delta shift		1 to 3
Delta offset	''	0 to delta shift – 1
N(1)_cs	if number of RBs used for PUCCH is 0	always 0
	otherwise	0 to 7, but only multiples of delta shift
N(2)_RB	if N(1)_cs is 0	0 to number of RBs used for PUCCH
	otherwise	0 to number of RBs used for PUCCH – 1
SRS subframe configuration SRS bandwidth configuration		0 to 15 0 to 7
A/N-SRS simultaneous TX	enables simultaneous transmission of SRS and PUCCH	on/off
Resource allocation uplink		
Select user equipment	up to 8 UEs can be configured individually	and allocated to the subframes.
Number of configurable subframes (for	determines the number of configurable	up to 40 subframes
FDD), number of configurable uplink	uplink subframes; the subframe	The actual range depends on the duplex
subframes (for TDD)	configurations are used periodically Note: Sounding reference signals are configured globally and therefore not copied here.	mode, on the sequence length and – in the case of TDD – on the UL/DL configuration.
Cyclic prefix	determines whether a normal or extended cyclic prefix is used for a specific subframe Note: It automatically determines the number of SC-FDMA symbols per subframe.	normal, extended Note: The cyclic prefix type can be set here only if the cyclic prefix type in the general settings dialog is set to user-defined.
Allocation table		
Content type	UE can be set to PUSCH or PUCCH	PUSCH, PUCCH
Modulation	determines the modulation scheme used if content type is PUSCH or the PUCCH format if content type is PUCCH	QPSK, 16QAM, 64QAM or format 1, 1a, 1b, 2, 2a, 2b
Number of resource blocks (RB)	defines size of selected allocation in terms of resource blocks	1 to total number of RBs
Offset VRB	sets the virtual resource block offset; the physical resource block offset for the two slots of the corresponding subframe is set automatically depending on the frequency hopping settings	0 to total number of RBs – 1
Power	determines power of selected allocation	-80 dB to +10 dB in steps of 0.01 dB
State	sets state of selected allocation	on/off

User equipment configuration		
3GPP release		Release 8/9
UE ID/n_RNTI	user equipment identifier (n_RNTI) for selected user equipment	0 to 65535
Power	sets power level of selected UE	-80 dB to +10 dB in steps of 0.01 dB
Mode	·	standard, PRACH
Restart Data, A/N, CQI and RI every subframe	If activated, all data sources are restarted every subframe.	on/off
FRC state	If activated, several parameters are set in line with the fixed reference channel definitions in 3GPP TS 36.141 v.8.3.0.	on/off
FRC	selects the FRC	A1-1, A1-2, A1-3, A1-4, A1-5, A1-6, A1-7 A2-1, A2-2, A2-3, A3-1, A3-2, A3-3, A3-4, A3-5, A3-6, A3-7, A4-1, A4-2, A4-3, A4-4, A4-5, A4-6, A4-7, A4-8, A5-1, A5-2, A5-3, A5-4, A5-5, A5-6, A5-7, A7-1, A7-2, A7-3, A7-4, A7-5, A7-6, A8-1, A8-2, A8-3, A8-4, A8-5, A8-6 A12-1, A12-2, A12-3, A12-4, A12-5, A12-6 A13-1, A13-2, A13-3, A13-4, A13-5, A13-6 (the actual range depends on the configured bandwidth and cyclic prefix settings of the general settings dialog)
Offset VRB	If the FRC state is switched on, this value replaces all offset VRB values in the allocation table.	0 to total number of FRC RBs – 1
n(2)_DMRS	If the FRC state is switched on, this value replaces all n(2)_DMRS values for layer 0 in the enhanced settings for PUSCH.	0, 2, 3, 4, 6, 8, 9, 10
Data source	determines data source used for PUSCH of selected UE	All0, All1, pattern, PNx and data list
Scrambling state		on/off
Channel coding state	enables channel coding (FEC) and multiplexing of control and data information	on/off
Channel coding mode	selects whether data, control information or both is transmitted on the PUSCH	UL-SCH only, UCI + UL-SCH, UCI only
I_HARQ_Offset		0 to 14
I_RI_Offset		0 to 12
I_CQI_Offset		2 to 15
DRS power offset	sets power of DRS relative to power level of PUSCH/PUCCH allocation of corresponding subframe	-80 dB to +10 dB in steps of 0.01 dB
SRS state	enables sending of sounding reference signals	on/off
Transmit trigger type 0 SRS	enables the transmission of SRS trigger type 0	always on if LTE release is Release 8/9
SRS power offset	sets power of SRS relative to power level of corresponding UE	-80 dB to +10 dB in steps of 0.01 dB
SRS cyclic shift	cyclic shift used for SRS	0 to 11
Configuration index I_SRS	SRS configuration index	0 to 636 for FDD, 0 to 644 for TDD
Bandwidth configuration B_SRS	SRS bandwidth configuration	0 to 3
Transmission comb k_TC	SRS transmission comb	0 to 1
Hopping bandwidth b_hop	SRS hopping bandwidth	0 to 3
Frequency domain position n_RRC	SRS frequency domain position	0 to 100

Enhanced settings for PUSCH	4 888	1
Cyclic shift field	for DRS	0 to 7
n(2)_DMRS, 0	sets for layer 0 the part of the DMRS index which is part of the uplink scheduling assignment	0, 2, 3, 4, 6, 8, 9, 10
Frequency hopping		on/off
Information in hopping bits		0 to 1 if the total number of RBs is less than 50, otherwise 0 to 3
HARQ ACK mode	Note: Bundling will be supported in a later version.	multiplexing, bundling
Number of ACK/NACK bits		0 to 20
ACK/NACK pattern		0, 1
Number of RI bits		0 to 512
RI pattern		0, 1
Number of CQI bits		0 to 1024
CQI pattern		0, 1
Transport block size UL-SCH		1 to 253440
Redundancy version index UL-SCH		0 to 3
Enhanced settings for PUCCH	I	 -
n_PUCCH	sets PUCCH index	range depending on cell-specific settings
ACK/NACK pattern	3031 GOOTTIIIdex	0, 1
Number of CQI bits		1 to 13
Number of coded CQI bits		20
CQI pattern		0, 1
Settings for PRACH		0, 1
Preamble format	act indirectly by DDACII configuration	0 to 4
RB offset	set indirectly by PRACH configuration sets the start resource block used for the	0 to 4
	PRACH Note: Can be set individually for each subframe that is allowed to carry a PRACH in line with the selected PRACH configuration.	
N_cs configuration	Note: Can be set individually for each subframe that is allowed to carry a PRACH in line with the selected PRACH configuration.	0 to 15
Logical root sequence index	Note: Can be set individually for each subframe that is allowed to carry a PRACH in line with the selected PRACH configuration.	0 to 837
Sequence index (v)	Note: Can be set individually for each subframe that is allowed to carry a PRACH in line with the selected PRACH configuration.	0 to 63
Δt	delays the corresponding PRACH by Δt in μs Note: Can be set individually for each subframe that is allowed to carry a PRACH in line with the selected PRACH configuration.	–250 μs to +250 μs in steps of 0.01 μs
State	activates the PRACH for the corresponding subframe Note: Can be set individually for each subframe that is allowed to carry a PRACH in line with the selected PRACH configuration.	on/off

LTE Release 9 (xxx-K284 option)

For each K284 option, a K255 option must also be installed.

	This option enhances the xxx-K255 option (EUTRA/LTE digital standard) to support LTE Release 9, including the following features: Generation of positioning reference signals (PRS) Dual-layer beamforming (transmission mode 8) MBMS single frequency network (MBSFN) The xxx-K284 option requires the xxx-K255 option. Therefore, all general parameters of the xxx-K255 option are also valid for the xxx-K284 option, unless stated otherwise in the sections below.	
EUTRA/LTE digital standard		in line with 3GPP Release 9: TS 36.211 v.15.6.0, TS 36.212 v.15.6.0, TS 36.213 v.15.6
Positioning reference signals (PRS)	-
PRS state		on/off
PRS configuration index	in line with TS 36.211-910, table 6.10.4.3-1	0 to 2399
PRS periodicity (T_PRS)	read-only, displays the periodicity of the PRS generation in line with TS 36.211-910, table 6.10.4.3-1	160, 320, 640, 1280 subframes
PRS subframe offset (Delta_PRS)	read-only, displays the subframe offset of the PRS generation in line with TS 36.211-910, table 6.10.4.3-1	0 to 1279 subframes
Number of PRS DL subframes (N_PRS)	defines the number of consecutive PRS subframes	1, 2, 4, 6 subframes
PRS bandwidth	defines the resource blocks in which the PRS are transmitted	1.4/3/5/10/15/20 MHz
PRS power	sets the power of a PRS resource element relative to a common reference signal (CRS) resource element	-80 dB to +10 dB

² The dedicated mode will be supported in a later version.

Allocation value (HEX)	(from 36.331, MBSFN-SubframeConfig, identical to bitmap of subframe allocation) defines which subframes are used for MBSFN	
	1 frame 4 frames	0x00 to 0x3F (hex)
Area ID (N. ID. MDCEN)		0x000000 to 0xFFFFF (hex)
Area ID (N_ID_MBSFN)	(from 36.331, MBSFN-AreaInfoList) indicates the MBSFN area ID	0 to 255
Non-MBSFN region length	(from 36.331, MBSFN-AreaInfoList)	1, 2 OFDMA symbols
Non-MBSFN region length	indicates how many symbols from the	1, 2 OF DIVIA SYMBOIS
	beginning of the subframe constitute the non-	
	MBSFN region	
Notification indicator	(from 36.331, MBSFN-AreaInfoList)	0 to 7
Notification indicator	indicates which PDCCH bit is used to notify	0 to 7
	the UE about changes of the MCCH	
MCCH state	the OL about changes of the MCCH	on/off
MCCH repetition period	(from 36.331, MBSFN-AreaInfoList)	32, 64, 128, 256 frames
MCCH repetition period	defines the interval between transmissions of	32, 64, 126, 236 frames
	MCCH information in radio frames	
MCCH offset	(from 36.331, MBSFN-AreaInfoList)	0 to 7 frames
NICCH diset	indicates, together with the MCCH repetition	0 to 7 frames
	period, the radio frames in which the MCCH is scheduled ³	
MCCLI modification period	(from 36.331, MBSFN-AreaInfoList) defines	E42 4024 frames
MCCH modification period		512, 1024 frames
	periodically appearing boundaries; the	
	contents of different transmissions of MCCH information can only be different if there is at	
MCCLIMCC	least one such boundary between them	0.7.40.40
MCCH MCS	(from 36.331, MBSFN-AreaInfoList)	2, 7, 13, 19
	indicates the modulation and coding scheme	
Notification subframe index	(MCS) for the MCCH	1 to 6
Notification subtrame index	(from 36.331, MBMS-NotificationConfig)	1 10 6
	indicates the subframe used to transmit	
Notification constition coefficient	MCCH change notifications on PDCCH	0.4
Notification repetition coefficient	(from 36.331, MBMS-NotificationConfig)	2, 4
	actual change notification repetition period for the MCCH	
Notification offset	(from 36.331, MBMS-NotificationConfig)	0 to 7 frames
Notification offset	indicates, together with the notification	0 to 7 frames
	repetition coefficient, the radio frames in	
	which the MCCH information change	
	notification is scheduled ³	
Common subframe allocation period	(from 36.331, MBSFN-AreaConfiguration)	4, 8, 16, 32, 64, 128, 256 frames
Common submanie allocation period	indicates the period during which resources	4, 6, 16, 32, 64, 126, 236 frames
	corresponding with the radio frame allocation	
	period field are divided between the PMCHs that are configured for this MBSFN area	
Number of PMCHs	defines the number of PMCHs of the	1 to 15
Number of Finchs	simulated MBSFN area	1 to 15
Subframe allocation start	indicates the first subframe allocated to a	0 to 1534
Submanie anocation start	specific PMCH within a period identified by	0 to 1334
	the radio frame allocation period	
Subframe allocation end	indicates the last subframe allocated to a	1 to 1535
Submanie anocation end	specific PMCH within a period identified by	1 to 1555
	the radio frame allocation period	
Scheduling period	(from 36.331, PMCH-InfoList)	8, 16, 32, 64, 128, 256, 512, 1024 frames
Concading period	indicates the MCH scheduling period, i.e. the	0, 10, 02, 04, 120, 230, 312, 1024 Hallies
	periodicity used for providing MCH	
	scheduling information at lower layers (MAC)	
	for a specific PMCH	
MCS	(from 36.331, PMCH-InfoList)	0 to 28
INICO	indicates the modulation and coding scheme	0 10 20
	(MCS) for a specific PMCH	
Data source	sets the data source for a specific PMCH	All0, All1, pattern, PNx and data list
Data source	sets the data source for a specific FiviCH	Allo, All I, pallotti, FINX allu uala iisl

LTE Release 10 (LTE-Advanced) (xxx-K285 or R&S®CMW-KW502 option)

For each xxx-K285 (R&S®CMW-KW502) option, a xxx-K255 (R&S®CMW-KW500) option must also be installed.

General description	This option enhances the xxx-K255 (R&S®CMW-KW500) option (EUTRA/LTE digital standard) to support LTE Release 10 (LTE-Advanced) including the following features: DL carrier aggregation including cross-carrier scheduling Generation of DCIs with carrier indicator field (CIF) DL transmission mode 9 for up to 8 layer beamforming PUCCH format 3 Simultaneous PUSCH and PUCCH transmission Noncontiguous PUSCH transmission (uplink resource allocation type 1) PUSCH transmission mode 2 (uplink MIMO) Aperiodic SRS (SRS trigger type 1) The xxx-K285 (R&S®CMW-KW502) option requires the xxx-K255 (R&S®CMW-KW500) option. Therefore, all general parameters of the xxx-K255 (R&S®CMW-KW500) option are also valid for the xxx-K285 (R&S®CMW-KW502) option, unless stated otherwise in the sections below.	
EUTRA/LTE digital standard		in line with 3GPP Release 10: TS 36.211 v.15.6.0, TS 36.212 v.15.6.0, TS 36.213 v.15.6
Downlink simulation		
CSI reference signals		
This option enables the generation of DI abbreviated as 36.331.	CSI reference signals. References to the official	al 3GPP TS 36.331 v.10.8.0 specification are
General CSI settings		
ZeroPowerCSI-RS	(from 36.331, CSI-RS-Config) each bit set to 1 in this bitmap enables the corresponding CSI-RS configuration to be used for zero transmission power	0x0000 to 0xFFFF (hex)
Subframe configuration (I_CSI-RS)	(from 36.331, CSI-RS-Config) defines the subframes that contain the ZeroTxPower CSI-RS	0 to 154
CSI-RS state	enables the transmission of CSI reference signals in the cell	on/off
Number of CSI-RS antenna ports	(from 36.331, CSI-RS-Config) defines the number of antenna ports used for CSI-RS; the antenna ports are mapped to the physically available antennas in the "AP mapping" panel	1, 2, 4, 8
CSI-RS configuration	(from 36.331, CSI-RS-Config) Note: The range of valid configurations depends on the cyclic prefix, duplex mode and number of CSI antenna ports.	0 to 31
Subframe configuration (I_CSI-RS)	(from 36.331, CSI-RS-Config) defines the subframes that contain the CSI-RS	0 to 154
CSI-RS power	sets the CSI-RS EPRE in relation to the cell-specific RS (CRS)	-8.00 dB to +15.00 dB
Configure user/enhanced settings PD		
CSI awareness	defines whether the receiving UE is aware of the CSI-RS or not; PDSCH coding and mapping are adjusted accordingly	on/off
$4 \times$ secondary cells/SCells) in line with E one baseband depends on the maximum	carrier aggregation signals with up to five compound available bandwidth of the target generator, the ferences to the official 3GPP TS 36.331 v.10.8.0 activates the generation of several	nent carriers that can be generated within e bandwidth and the exact frequency offsets
	component carriers (CC)	
Cell index	(from 36.331, RRCConnectionReconfiguration) cell index of SCell, not to be mixed up with the physical cell ID; is required for signaling on the DCI CIF (carrier indicator field)	1 to 7

Version 15.00, September 2020

Phy cell ID	(from 36.331, RRCConnectionReconfiguration) sets the physical cell ID of the SCell	0 to 503	
Bandwidth	sets the bandwidth of the SCell	1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz	
Δf	defines the frequency shift for this SCell relative to the PCell		
	range	depends on the respective Rohde & Schwarz instrument	
	resolution	0.1 MHz	
CIF present	(from 36.331, CrossCarrierSchedulingConfig) defines whether the CIF (carrier indicator field) is present or not in PDCCH DCI formats transmitted from this cell	on/off	
schedCell index	(from 36.331, CrossCarrierSchedulingConfig) defines from which cell this cell receives the DL and UL grants	0 to 7	
PDSCH start	(from 36.331, CrossCarrierSchedulingConfig) sets the starting symbol of the PDSCH for the SCell (control region for PDCCH)	1 to 4	
PHICH N_g		1/6, 1/2, 1, 2, custom	
PHICH duration		normal, extended	
Power	sets the power offset of the SCell relative to the PCell	-80 dB to +80 dB	
Delay	configures a time delay of the SCell relative to the PCell	0 ns to 700 000 ns	
State	activates/deactivates this cell	on/off	
CA settings in the downlink user config	uration		
Activate CA	activates/deactivates CA support for the user	on/off	
UL carriers	activates/deactivates the associated uplink carriers for the downlink carriers	on/off	
DCI configuration	·		
Cell index	defines from which cell this DCI is transmitted when carrier aggregation is activated	0 to 7	
Carrier indicator field	part of DCI when CIF is set to be present; defines on which cell UL/DL transmission takes place	0 to 7	
DL transmission mode 9 for up to 8 layer			
	nlink signals dedicated to UE that is set to tran d. The way that the (logical) antenna ports are		
Transmission mode	selects the downlink transmission mode	transmission mode range is extended by transmission mode 9	
DCI format	selects the DCI format	DCI format range is extended by format 2C	

Uplink simulation General configuration		
This option enables the generation of uplin	k signals in line with FLITRA Release 10	
3GPP release	enables/disables the Release 10 functionality for a user equipment	Releases 8/9, LTE-Advanced
Number of configurable uplink subframes	independently configurable for PUSCH and PUCCH if a user equipment is a configured LTE-Advanced user equipment	1 to the number of uplink subframes in 4 frames
PUCCH format 3		1
This option enables the generation of PUC	CH with format 3 for configured LTE-Advance	d user equipment.
Modulation/format (for the PUCCH of a configured LTE-Advanced user equipment)	selects the format of the PUCCH	F1, F1a, F1b, F2, F2a, F2b, F3
Simultaneous PUSCH and PUCCH trans	mission	
	CH and PUCCH of a configured LTE-Advance	ed user equipment in the same subframe
Content	For a configured LTE-Advanced user equipment, both channel types are available for configuration in the same subframe.	PUCCH, PUSCH
Noncontiguous PUSCH transmission (u This option enables the generation of PUS resource allocation type 1).	CH with noncontiguous frequency allocation (t	two resource block sets according to uplink
Set 1 No. RB	number of resource blocks for the first set	1 to total number of RBs;
	of an LTE-Advanced user equipment PUSCH or for the only set of a Release 8/9 user equipment PUSCH or for the PUCCH	the actual range can be limited due to other configurations of the cell or of the user equipment
Set 1 Offset VRB	VRB offset for the first set of an LTE-Advanced user equipment PUSCH or for the only set of a Release 8/9 user equipment PUSCH	0 to total number of RBs – 1; the actual range can be limited due to other configurations of the cell or of the user equipment
Set 2 No. RB	number of resource blocks for the second set of an LTE-Advanced user equipment PUSCH	0 to total number of RBs – 2; the actual range can be limited due to other configurations of the cell or of the user equipment
Set 2 Offset VRB	VRB offset for the second set of an LTE-Advanced user equipment PUSCH	2 to total number of RBs – 3; the actual range can be limited due to other configurations of the cell or of the user equipment
PUSCH transmission mode 2 (uplink MI	MO)	
	CH with transmission mode 2 (uplink MIMO).	
Transmission mode	transmission mode for PUSCH, only available for LTE-Advanced user equipment	(spatial multiplexing not possible), (spatial multiplexing possible)
Maximum number of antenna ports for PUSCH		1, 2, 4
Activate DMRS with OCC for one antenna port		on/off
Number of antenna ports for SRS Number of antenna ports for PUCCH format 1/1a/1b		1, 2, 4
Number of antenna ports for PUCCH format 2/2a/2b Number of antenna ports for PUCCH		1, 2
format 3 Precoding scheme	for PUSCH	none, spatial multiplexing
Number of codewords	for PUSCH	1, 2
	for PUSCH	
Number of layers	for PUSCH	1, 2, 4 1, 2, 4
Number of used antenna ports		
Codebook index	for PUSCH DBS	depends on the codewords/layers/anteni ports configuration
Cyclic shift field	for PUSCH DRS for PUSCH codeword 1	0 to 7 1 to 100000
Transport blook size		
Transport block size Redundancy version index	for PUSCH codeword 1	0 to 3

Version 15.00, September 2020

Aperiodic SRS (SRS trigger type 1)		
This option enables the generation of SI	RS signals according to SRS trigger type 1 (ape	riodic SRS).
Transmit trigger type 0 SRS	enables the transmission of SRS trigger type 0 in addition to SRS trigger type 1	always on for a Release 8/9 user equipment; on/off for an LTE-Advanced user equipment
Configuration sets for trigger type 1	individual SRS configuration sets for trigger type 1 SRS transmissions	DCI0, DCI1A/2B/2C/2D, DCI4Set1, DCI4Set2, DCI4Set3
Number of transmissions	number of scheduled SRS transmissions for a specific configuration set	0 to 50
Subframes for transmissions	subframes in which SRS transmissions are scheduled for a specific configuration set	the range depends on the configured ARB sequence length

LTE Release 11 (xxx-K412 option)

For each xxx-K412 option, a xxx-K255 option must also be installed.

	 LTE Release 11 and enhanced features, inc Release 11 special subframe configurating 7 (extended cyclic prefix) PUCCH format 3 for periodic CSI Uplink carrier aggregation including mixed Mixed TDD settings for downlink carrier PDSCH scheduling mode "Auto Sequentransmissions according to long HARQ precious according to long hard precious according to long hard	 PUCCH format 3 for periodic CSI Uplink carrier aggregation including mixed TDD settings Mixed TDD settings for downlink carrier aggregation PDSCH scheduling mode "Auto Sequence" for automatic scheduling of downlink transmissions according to long HARQ patterns Enhanced PDCCH (EPDCCH) Transmission mode 10, DCI format 2D, scrambling settings for CoMP/eICIC/feICIC The xxx-K412 option requires the xxx-K255 option. Therefore, all general parameters of the xxx-K255 option are also valid for the xxx-K412 option, unless stated otherwise in 	
EUTRA/LTE digital standard		in line with 3GPP Release 11: TS 36.211 v.15.6.0, TS 36.212 v.15.6.0, TS 36.213 v.15.6	
Release 11 special subframe conf	igurations	13 30.213 V. 13.0	
	of TDD signals with special subframe configuration 9	and normal cyclic prefix, as well as TDD	
TDD special subframe configuration	defines the special subframe configuration	0 to 9	
,	for TDD (frame structure type 2)	For the values 8 and 9 cyclic prefix type "normal" is allowed only. For the values 0 to 7 both cyclic prefix types, "normal" and "extended" are allowed.	
PUCCH format 3 for periodic CSI			
	of PUCCH format 3 with up to 22 information bit befor transmitting periodic CSI reports by means of PUCC		
Number of A/N + SR + CSI bits	defines the number of PUCCH format 3	0 to 22	
	information bit before channel coding of uplink carrier aggregation signals with up to five co

Cell	in the user equipment configuration and the user equipment's antenna port mapping table	PCell, SCell 1, SCell 2, SCell 3, SCell 4
Cell	in the subframe configuration	PCell, SCell 1, SCell 2, SCell 3, SCell 4
Power	for a specific cell (in the antenna port mapping table)	-80 dB to 10 dB
Mixed TDD settings for downlink carr This option enables the usage of differe component carriers, in line with EUTRA	rier aggregation nt TDD UL/DL configurations and TDD special so	ubframe configurations in individual downlink
UL/DL configuration	in case of TDD: UL/DL configuration of this downlink component carrier	0 to 6
Special SF configuration	in case of TDD: special subframe configuration of this downlink component carrier	0 to 9
PDSCH scheduling mode "Auto Sequ		
This option enables the PDSCH schedultransmissions according to long HARQ available without the option K112, the modownlink subframes. In the scheduling respectively.	lling mode "Auto Sequence". By means of this mot patterns is possible. In the scheduling modes "Manaximum length of HARQ patterns is limited by the mode "Auto Sequence", this limitation does not a	anual" and "Auto/DCI", which are also e maximum number of configurable
PDSCH scheduling	determines the PDSCH scheduling mode	manual, auto/DCI, auto scheduling
Number of configurable subframes	determines the number of independent subframe configurations	not available in PDSCH scheduling mode "Auto Sequence" (subframe configurations are determined automatically in PDSCH scheduling mode "Auto Sequence")
DCI format	PDCCH settings	in PDSCH scheduling mode "Auto Sequence", only one downlink DCI and one uplink DCI is configurable per each user and each cell (downlink and uplink DCIs are determined automatically from these template DCIs in PDSCH scheduling mode "Auto Sequence")
Parameters for "Autofill Sequences"		
Autofill DL sequence	determines if the autofill feature should create entries in the downlink auto sequence tables	off/on
Number of HARQ process IDs	determines the number of downlink HARQ process IDs available for the autofill feature	1 to 15
Starting NDI (downlink)	determines whether the autofill feature starts with NDI 0 or 1 in the downlink auto sequence tables	off/on
Number of HARQ transmissions (downlink)	determines the number of HARQ transmissions in each downlink HARQ process before a retransmission is scheduled	1 to 32
Skip process at unused subframes	determines whether the HARQ process IDs should be skipped in unused subframes	off/on
Subframes to use	determines which downlink or special subframes should be used for downlink transmission	off/on (per subframe)
Autofill UL sequence	determines if the autofill feature should create entries in the uplink auto sequence tables	off/on
Number of HARQ transmissions (uplink		1 to 32
Starting NDI (uplink)	determines whether the autofill feature starts with NDI 0 or 1 in the uplink auto sequence tables	off/on
Parameters for the downlink auto seque		
MCS mode	determines the MCS mode	manual, fixed, target code rate
Target code rate	determines the target code rate	0 to 1
Target modulation	determines the target modulation	QPSK, 16QAM, 64QAM
MCS (for fixed MCS mode)	determines the MCS for fixed MCS mode	0 to 31

D) / I'		
RV coding sequence	determines the sequence of redundancy versions used for the HARQ transmissions	sequence of the values 0 to 3
Use RLC Counter	determines whether the RLC counter should be included in the user's downlink	off/on
Out to a second	transport blocks	non-no-don-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-no-do-n
Subframe	subframe number of an actual downlink transmission	range depends on the available ARB memory
MCS (for manual MCS mode)	MCS of an actual downlink transmission	0 to 31
HARQ process	HARQ process ID of an actual downlink transmission	0 to 15
NDI	NDI of an actual downlink transmission	off/on
Parameters for the uplink auto sequence to		
Vary UL tx power and RBA	determines if the TPC commands and the resource block assignments can vary inside the uplink DCI transmissions	off/on
Subframe	subframe number of an actual uplink DCI transmission	range depends on the available ARB memory
RBA	determines the resource block assignment of an actual uplink DCI transmission	range depends on the channel bandwidth
NDI	determines the NDI of an actual uplink DCI transmission	off/on
PUSCH TPC	determines the PUSCH TPC of an actual uplink DCI transmission	0 to 3
Enhanced PDCCH (EPDCCH)	•	
	ed PDCCH (EPDCCH) channel in the PDSCH	scheduling modes "Auto/DCI" and
Parameters in the user configuration		
Activate EPDCCH	activates the EPDCCH for this user	on/off
Activate EPDCCH Set 1 / 2 state	activates the EPDCCH for this user	on/off
Activate EPDCCH Set 1 / 2 state Set 1 / 2 transmission type	activates the EPDCCH set 1 / 2 determines the transmission type for	on/off on/off localized/distributed
Set 1 / 2 state	activates the EPDCCH set 1 / 2 determines the transmission type for EPDCCH set 1 / 2 determines the number of PRB pairs for	on/off
Set 1 / 2 state Set 1 / 2 transmission type	activates the EPDCCH set 1 / 2 determines the transmission type for EPDCCH set 1 / 2	on/off localized/distributed 2, 4, 8 range depends on channel bandwidth and
Set 1 / 2 state Set 1 / 2 transmission type Set 1 / 2 number of PRB pairs	activates the EPDCCH set 1 / 2 determines the transmission type for EPDCCH set 1 / 2 determines the number of PRB pairs for EPDCCH set 1 / 2 determines the resource block assignment	on/off localized/distributed 2, 4, 8
Set 1 / 2 state Set 1 / 2 transmission type Set 1 / 2 number of PRB pairs Set 1 / 2 resource block assignment	activates the EPDCCH set 1 / 2 determines the transmission type for EPDCCH set 1 / 2 determines the number of PRB pairs for EPDCCH set 1 / 2 determines the resource block assignment for EPDCCH set 1 / 2 determines the users specific EPDCCH	on/off localized/distributed 2, 4, 8 range depends on channel bandwidth and other EPDCCH settings
Set 1 / 2 state Set 1 / 2 transmission type Set 1 / 2 number of PRB pairs Set 1 / 2 resource block assignment Set 1 / 2 n^EPDCCH_ID	activates the EPDCCH set 1 / 2 determines the transmission type for EPDCCH set 1 / 2 determines the number of PRB pairs for EPDCCH set 1 / 2 determines the resource block assignment for EPDCCH set 1 / 2 determines the users specific EPDCCH identifier for EPDCCH set 1 / 2 determines the relative EPDCCH power of	on/off localized/distributed 2, 4, 8 range depends on channel bandwidth and other EPDCCH settings 0 to 503
Set 1 / 2 state Set 1 / 2 transmission type Set 1 / 2 number of PRB pairs Set 1 / 2 resource block assignment Set 1 / 2 n^EPDCCH_ID Set 1 / 2 rel. EPDCCH power Antenna port mapping for antenna ports	activates the EPDCCH set 1 / 2 determines the transmission type for EPDCCH set 1 / 2 determines the number of PRB pairs for EPDCCH set 1 / 2 determines the resource block assignment for EPDCCH set 1 / 2 determines the users specific EPDCCH identifier for EPDCCH set 1 / 2 determines the relative EPDCCH power of EPDCCH set 1 / 2 configures the antenna port mapping for	on/off localized/distributed 2, 4, 8 range depends on channel bandwidth and other EPDCCH settings 0 to 503 -80 dB to +10 dB complex mapping values where real and
Set 1 / 2 state Set 1 / 2 transmission type Set 1 / 2 number of PRB pairs Set 1 / 2 resource block assignment Set 1 / 2 n^EPDCCH_ID Set 1 / 2 rel. LTE Release 12 (xxx-K413 or R&S®CMW-KW504 option)

For each xxx-K413 (R&S®CMW-KW504) option, a xxx-K255 (R&S®CMW-KW500) option must also be installed on the respective instrument.

Conoral description	This antion aphances the year KOEF antion	(ELITEA/LTE digital standard) to support	
General description	This option enhances the xxx-K255 option		
	 LTE Release 12, including the following features: 256QAM modulation for PDSCH, downlink dummy resource elements and F Downlink test models for 256QAM according to 3GPP TS 36.141 v. 12.9.0 		
	DCI format 1C for eIMTA-RNTI		
	 Mixed duplexing for uplink carrier aggregation Mixed duplexing for downlink carrier aggregation 		
	Further DL MIMO enhancements (enhancements)	ncea 41X coaebook)	
	Sidelink (D2D)		
	The xxx-K413 (R&S®CMW-KW504) option		
	option. Therefore, all general parameters of	of the xxx-K255 (R&S®CMW-KW500) option	
	are also valid for the xxx-K413 (R&S®CMW		
	the sections below.		
FUTDA/LTE digital atom double	the sections below.	in line with 2000 Deleges 40:	
EUTRA/LTE digital standard		in line with 3GPP Release 12:	
		TS 36.211 v.15.6.0, TS 36.212 v.15.6.0,	
		TS 36.213 v.15.6	
256QAM modulation for PDSCH, down	nlink dummy resource elements and PMCH		
	wnlink signals with 256QAM modulation in the I	PDSCH channel the PMCH channel as we	
		20011 onamor, the Fivier Chainer, as we	
as in the dummy OFDM resource eleme		Dames	
Parameter	Condition	Range	
Modulation	dummy data configuration	QPSK, 16QAM, 64QAM, 256QAM	
MCS table 2	downlink user configuration	on/off	
Modulation	PDSCH allocation	QPSK, 16QAM, 64QAM, 256QAM	
Use table 2	PMCH configuration	on/off	
Downlink test models for 256QAM acc			
This option enables the configuration and	d generation of the 256QAM test models accord	ding to 3GPP TS 36.141 v. 12.9.0 for FDD	
well as TDD.		-	
Parameter	Condition	Range	
		-	
EUTRA test models (downlink)	in line with 3GPP TS 36.141 v.12.9.0	E-TM1.1, E-TM1.2, E-TM2, E-TM3.1,	
	both FDD and TDD E-TMs are supported	E-TM3.2, E-TM3.3, E-TM2a, E-TM3.1a	
DCI format 1C for eIMTA-RNTI			
This option enables the generation of do	wnlink DCI format 1C in case of eIMTA-RNTI.		
Parameter	Condition	Range	
eIMTA-RNTI	downlink user configuration for TDD	1 to 65523	
User	PDCCH DCI configuration	user1 eIMTA, user2 eIMTA, user3 eIMTA

LTE Release 13/14/15 (xxx-K419 or R&S®CMW-KW514/-KW570 option)

For each xxx-K419 (R&S°CMW-KW514/-KW570) option, a xxx-K255 (R&S°CMW-KW500) option must also be installed on the respective instrument. The R&S°CMW-KW514 option covers the LAA related feature set only. The R&S°CMW-KW570 option covers the C-V2X related feature set only.

General description	LTE Releases 13, 14 and 15, including ti 1024QAM modulation for PDSCH 256QAM modulation for PUSCH DL LAA (frame structure type 3, DRS (R&S®SMW-K85 is also required) PUCCH formats 4 and 5 Special subframe configuration 10 (P Enhancements for DCI formats 2C/2I SRS enhancements (extra UpPTS sy	 256QAM modulation for PUSCH DL LAA (frame structure type 3, DRS for LAA, DCI1C for LAA) (R&S®SMW-K85 is also required) PUCCH formats 4 and 5 Special subframe configuration 10 (PUSCH in special subframe) Enhancements for DCI formats 2C/2D (dmrsAltTable/semiOpenLoop) SRS enhancements (extra UpPTS symbols for SRS) Enhanced uplink DMRS (ul-DMRS-IFDMA) PRACH restricted set type B 	
EUTRA/LTE digital standard		in line with 3GPP Release 13/14/15: TS 36.211 v.15.6.0, TS 36.212 v.15.6.0,	
10240 AM modulation for DDCCU		TS 36.213 v.15.6	
This option extends the LTE carrier:	aggregation feature of the R&S®SMW-K85 option	for generation of downlink signals with	
1024QAM modulation in the PDSCH		101 goneration of downlink signals with	
256QAM modulation for PUSCH			
	aggregation feature of the R&S®SMW-K85 option	for generation of uplink signals with 256QAM	
modulation in the PUSCH channel.	55 5 11 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	5 - 2 - 2 - 2 - 1 - 1 - 1 - 1 - 1 - 1 - 1	
Modulation	PUSCH allocation	QPSK, 16QAM, 64QAM, 256QAM	
FRC	selects the FRC	A1-1, A1-2, A1-3, A1-4, A1-5, A1-6, A1-7 A2-1, A2-2, A2-3, A3-1, A3-2, A3-3, A3-4, A3-5, A3-6, A3-7, A4-1, A4-2, A4-3, A4-4, A4-5, A4-6, A4-7, A4-8, A5-1, A5-2, A5-3, A5-4, A5-5, A5-6, A5-7,	
		A7-1, A7-2, A7-3, A7-4, A7-5, A7-6, A8-1, A8-2, A8-3, A8-4, A8-5, A8-6 A12-1, A12-2, A12-3, A12-4, A12-5, A12-6 A13-1, A13-2, A13-3, A13-4, A13-5, A13-6 (The actual range depends on the configured bandwidth and cyclic prefix settings of the general settings dialog.)	
Downlink LAA			
This option enables the configuration LAA and DCI Format 1C for LAA.	n and generation of signals for downlink LAA SCe	ells (frame structure type 3), including DRS for	
Duplexing	SCells in the downlink carrier aggregation table, in case of PDSCH scheduling modes "Auto/DCI" or "Auto Sequence"	FDD, TDD, LAA	
DRS state	only for SCells with duplexing "LAA"	on/off	
DRS periodicity		40, 80, 160 ms	
DRS offset		range depends on DRS periodicity	
DRS duration		1 to 5 ms	
DRS pattern		range depends on DRS periodicity	
CSI-RS part of DRS		on/off	
DRS zero power CSI-RS	up to 5 zero power CSI-RS configurations	0 to FFFF (hex)	
DRS I_CSI_RS	up to 5 CSI-RS configurations	0 to 154	
Number of LAA bursts		0 to 10	
Starting subframe		0 to 9999	
Starting symbol		s0 or s7	
		1 ms to 10 ms	
Burst duration			
Number of ending symbols		3, 6, 9, 10, 11, 12, 14	

(e)FD-MIMO		
	d generation of CSI-RS for FD-MIMO (Release	e 13) and eFD-MIMO (Release 14).
CSI-RS in DwPTS		on/off
Number of CSI-RS configurations		1, 2, 3, 4, 5, 7
Number of CSI-RS antenna ports	possible values depend on "Number of	1, 2, 4, 8
per CSI-RS configuration	CSI-RS configurations"	
CDMType		CDM2, CDM4, CDM8
Frequency density		1, 1/2, 1/3
Transmission comb	possible values depend on "Frequency density"	0, 1, 2
PUCCH formats 4 and 5		
	d generation of signals for PUCCH formats 4 a	
Modulation/format M_RB		F1, F1a, F1b, F2, F2a, F2b, F3, F4, F5 depends on n n_PUCCH antenna port 100
n_oc		0 to 1
Number of A/N + SR + CSI bits	length	1 to 64 for F4 and F5
Cyclic shift field		0 to 7, one-to-one correspondence with N(1)_DMRS
N(1)_DMRS		0, 2, 3, 4, 6, 8, 9, 10
· ,_		one-to-one correspondence with cyclic shift field
N(2)_DMRS		0, 6
	for F4	always 0
	for F5	
	when n_oc = 0	0
	when n_oc = 1	6
Special subframe configuration

Cellular IoT Release 13 (xxx-K415 or R&S®CMW-KW300/-KW590 option)

The R&S®CMW-KW300 option covers the NB-IoT related feature set only. The R&S®CMW-KW590 option covers the MTC related feature set only. For R&S®CMW-KW590 option, an R&S®CMW-KW500 option must also be installed on the respective instrument.

General description	This option contains the support for the LTE Release 13 cellular IoT variants NB-IoT (narrowband IoT, Cat-NB1) and eMTC (enhanced machine type communication, Cat-M1).		
	 NB-IoT and eMTC downlink ⁴ and uplink signal generation NB-IoT modes in-band, guard band and standalone 		
	(EUTRA/LTE digital standard), the cellular parameters with the EUTRA/LTE digital sta		
Cellular IoT standard		in line with 3GPP Release 13: TS 36.211 v.15.6.0, TS 36.212 v.15.6.0, TS 36.213 v.15.6.0	
General settings			
Mode	restricts the user interface to certain LTE/cellular IoT features for simplicity or enables access to all features according to the installed options	only available if EUTRA as well as cellular IoT option(s) are installed in the software	
Uplink simulation			
Physical settings			
Channel bandwidth	determines the channel bandwidth used	200 kHz,1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz	
Number of resource blocks	The number of resource blocks is automatically set in line with the selected channel bandwidth.		
Number of eMTC narrowbands	The number of eMTC narrowbands is automatically set in line with the selected channel bandwidth.		
Cell specific settings	T		
eMTC valid subframes	The eMTC valid subframes are configurable freely.	on/off	
Signals - NB-IoT-DRS			
Group hopping	activates reference signal group hopping	on/off	
Use base sequences	only selected base sequences are used	on/off	
Delta sequence shift for NPUSCH		0 to 29	
Three tone cyclic shift		0 to 2	
Six tone cyclic shift Three tone base sequence		0 to 3	
Six tone base sequence		0 to 11 0 to 13	
Twelve tone base sequence		0 to 13	
eMTC-PUSCH settings		0 10 29	
Narrowband hopping	enables or disables the PUSCH hopping between narrowbands	on/off	
Hopping offset		1 to 15 narrowbands	
eMTC-PRACH settings			
Hopping offset	PRACH hopping offset as number of resource blocks	1 to 110	
Restricted set (high speed mode)		on/off	
CE Level	different coverage extension levels are defined	0, 1, 2, 3	
PRACH config		0 to 63	
Frequency offset		0 to 94	
Hopping		on/off	
Number of repetitions	PRACH repetitioins	1, 2, 4, 8, 16, 32, 64 and 128	
Starting subframe periodicity in ms NB-IoT-NPRACH settings		2, 4, 8, 16, 32, 64, 128 and 256	
Preamble format		0,1	
NPRACH configuration		0, 1, 2	
Periodicity in ms		40 to 2560	
Starting time in ms		8, 16, 32, 64, 128, 256, 512, 1024	

⁴ eMTC downlink signal generation will be supported in a later release.

		T
Number of repetitions	number of NPRACH repetitions	1, 2, 4, 8, 16, 32, 64 and 128
Number of subcarriers	setting number of subcarriers	12, 24, 36, 48
Subcarrier offset	offset between the subcarriers	0, 2, 12, 18, 24, 34, 36

Start subframe		2 to 66659

Number of repetitions		1, 2, 4, 8, 16, 32, 64, 128
Number of resource units	format 1	1, 2, 3, 4, 5, 6, 8, 10
	format 2	1
Subcarrier indication field	valid only at 15 kHz	0 to 18
ACK/NAK resource field	valid only at 3.75 kHz	0 to 47
Power		-80 dB to +10 dB
Starting redundancy version index (rv_idx)		0 or 2
Early transmission (EDT) settings		
Early transmission (EDT) support		on/off
EDT-TBS		88, 328, 408, 504, 584, 680, 808, 936, 1000
NB-IoT downlink TDD		
Physical settings		
TDD UL/DL configuration		1 to 5
TDD special subframe configuration		0 to 10
Cell settings		
NB-IoT bitmap subframes		10 and 40
Enhanced settings - NPBCH		
Scheduling SIB1		0 to 15
NPUSCH F2-FDD		
Scheduling request (SR) support		on/off
NWUS (narrowband wakeup signal)		
NWUS state		on/off
NWUS power		-80 dB to +10 dB
NWUS max duration		1, 2, 4, 8, 16, 32, 64, 128, 256, 512, 1024
NWUS actual duration		1, 2, 4, 8, 16, 32, 64, 128, 256, 512, 1024
NWUS time offset		40, 80, 160, 240
NWUS start subframe		1 and maximum frame number

OneWeb user-defined signal generation (xxx-K430 option)

General settings			
Mode		predefined and user defined modes	
Baseband filter	standard	root cosine with rolloff 0.085	
	other	see data sheet of respective	
		Rohde & Schwarz instrument,	
		"baseband generator" section	
Clipping	setting of clipping value rela	tive to highest peak in percent; clipping takes place prior to	
	baseband filtering; clipping	baseband filtering; clipping reduces the crest factor	
Modes		vector i + j q	
		scalar i , q	
Clipping level		1 % to 100 %	
Marker		restart	
Triggering		see data sheet of respective	
		Rohde & Schwarz instrument,	
		"I/Q baseband generator" section	
Link direction		downlink, uplink	
Physical layer mode	downlink	SC-TDM	
	uplink	SC-FDMA	

Downlink simulation		
Physical settings		
Channel bandwidth		250 MHz
Sampling rate		230.4 MHz
Cell ID		0 to 255
RA-RNTI		1 to 240
Downlink reference signal structu	ure	
Reference signal power	power of reference symbol	0 dB
P-SYNC power	determines the power of the primary synchronization signal	-80 dB to +10 dB in steps of 0.001 dB
Global MIMO configuration	simulated cell specific antenna configuration	1

Number of configurable subframes	determines the number of configurable subframes; the subframe configurations are used periodically Note: P-SYNC and PBCH are configured globally and therefore not copied here. The use of this function ensures a valid	up to 40 subframes; the actual range depends on the sequence length
	frame configuration.	
Allocation table		
Codeword	up to 2 codewords can be configured	1/1,1/2, 2/2
Modulation	determines modulation scheme used	QPSK, 8PSK, 16QAM
Number of resource blocks (RB)	defines size of selected allocation in terms of resource blocks	1 to 1152
Offset RB	defines start resource block of selected allocation Note: This value is read-only, if auto mode is activated for selected allocation.	0 to total number of RBs – 1
Data source	determines data source of selected allocation Note: Data sources for users 0 to 3 can be configured in the Configure User panel.	All0, All1, pattern, PNx, data list, user 0, user 1, user 2 and user 3
Power	determines power of selected allocation	-80 dB to +10 dB in steps of 0.001 dB
Content type	determines type of selected allocation	PDSCH, PDCCH, PBCH
State	sets state of selected allocation	on/off
Enhanced settings PBCH		
Scrambling state		on/off
Channel coding state	enables channel coding (FEC)	on/off
MIB (including SFN)	activates automatic MIB generation for PBCH	on/off
SFN offset	sets starting system frame number encoded in MIB	0 to 1020 in steps of 4
MIB spare bits	sets the MIB spare bits	pattern of 16 bit
Transport block size		32

Enhanced settings PDSCH		
Scrambling state		on/off
UE ID/n_RNTI	user equipment identifier (n_RNTI) for selected allocation	0 to 65535
Channel coding state	enables channel coding (FEC)	on
Transport block size	<u> </u>	16 to 850656
Redundancy version index		0 to 3
IR soft buffer size		31296 to 458400
Configuration of PCFICH, PDCCH		
State	enables PCFICH, PDCCH	on/off
PCFICH power	determines power of PCFICH	-80 dB to +10 dB in steps of 0.001 dB
PCFICH scrambling state		on/off
PCFICH CFI		1 to 12
PDCCH power		-80 dB to +10 dB in steps of 0.001 dB
PDCCH scrambling state		on/off
PDCCH format		0 to 4
User		user 1 to user 4, P-RNTI, SI-RNTI, RA-RNTI
Number of CCEs		depends on selected PDCCH format
CCE index		0 to 599
Data source PDCCH		All0, All1, pattern, PNx and data list
DCI format		0, 1ow,1a, 2ow, 3, 3a, 3ow
Search spaces		auto, common, UE-specific
DCI format 0 configuration		
Carrier indicator field		0 to 7
Resource block assignment		0 to 8191
Modulation, coding scheme and		0 to 31
redundancy version		
New data indicator		on/off
TPC command for PUSCH		0 to 3
Cyclic shift for DMRS		0 to 11
CSI/CQI request		0 to 3
SRS request		0 to 1
DCI format 10W configuration		0 += 4040575
Resource block assignment		0 to 1048575
Modulation and coding scheme HARQ process number		0 to 31 0 to 63
New data indicator		on/off
Redundancy version		0 to 3
TPC command for PUCCH		0 to 3
DCI format 1A configuration		0 10 3
Mode		PDSCH, PRACH
Resource block assignment		0 to 26564
Modulation and coding scheme		0 to 31
HARQ process number		0 to 63
New data indicator		on/off
Redundancy version		0 to 3
TPC command for PUCCH		0 to 3
SRS request		0 to 1
Preamble index		0 to 63
PRACH mask index		0 to 15
DCI format 20W configuration	1	
Resource block assignment		0 to 524287
TPC command for PUCCH		0 to 3
HARQ process number		0 to 63
MCS for a first transmission		0 to 31
MCS for a retransmission		0 to 3
New data indicator		on/off
Redundancy version		0 to 3
Neutricality version		· ·
DCI format 3 configuration		
		pattern of 64 bit
DCI format 3 configuration		pattern of 64 bit

Configure user	users that can be distributed over the entire source of a specific allocation in the allocation	The configure user dialog makes it possible to define and configure up to 4 scheduled users that can be distributed over the entire frame configuration by setting the data source of a specific allocation in the allocation table to user. Subframe allocations that are not adjacent or allocations of a different subframe can be configured to allow the use of a common data source.	
Transmission mode	selects the downlink transmission mode	mode 1OW, mode 2OW	
Scrambling state	enables scrambling for all allocations belonging to the selected user	on/off	
Channel coding state	enables channel coding (FEC) for all allocations belonging to the selected user	on/off	
UE ID/n_RNTI	user equipment identifier (n_RNTI) for selected user	0 to 65535	
Data source	determines data source of user currently being configured	All0, All1, pattern, PNx and data list	
UE category		1 to 5	

Uplink simulation		
General settings		
Channel bandwidth	determines the channel bandwidth used	20 MHz
FFT size	determines the sharmer parametri desa	2048
Number of resource blocks		100
Cell ID		0 to 255
Physical cell ID group		0 to 167
Physical layer ID		0 to 2
SFN offset		0 to 4095
Group hopping	activates reference signal group hopping while deactivating sequence hopping	on/off
Sequence hopping	only selectable if group hopping is deactivated	on/off
Delta sequence shift for PUSCH		0 to 29
n(1)_DMRS	sets the broadcast part of the DMRS index	0 to 11
PRACH configuration		0 to 47
Restricted set		on/off
PRACH frequency offset		0 to 94
Number of RBs used for PUCCH		0 to 100
Delta shift		1 to 3
N(1)_cs	if number of RBs used for PUCCH is 0	always 0
	otherwise	0 to 6, but only multiples of delta shift
N(2)_RB	if N(1)_cs is 0	0 to number of RBs used for PUCCH
	otherwise	0 to number of RBs used for PUCCH – 1
SRS subframe configuration		0 to 15
SRS bandwidth configuration		0 to 7
Carrier aggregation settings		
Activate carrier aggregation		on/off
Cell index		0, 1
Physical cell ID		0 to 503
Bandwidth	bandwidth of the SCell	20 MHz
Δf in MHz	defines the frequency shift for this SCell re	elative to the PCell
Setting range		depends on the respective
		Rohde & Schwarz instrument
Setting resolution		0.1 MHz
Duplexing		FDD
n(1)_DMRS	sets the broadcast part of the DMRS index	0 to 11
SRS subframe configuration		0 to 15
SRS bandwidth configuration		0 to 7
Delay	configures a time delay of the SCell relative to the PCell	0 ns to 700000 ns
State	activates/deactivates this cell	on/off

Resource allocation uplink		
Select user equipment Number of configurable subframes	up to 4 UE can be configured individually at determines the number of configurable uplink subframes; the subframe configurations are used periodically Note: Sounding reference signals are configured globally and therefore not copied here.	nd allocated to the subframes. up to 40 subframes
Cyclic prefix	determines whether a normal or extended cyclic prefix is used for a specific subframe Note: It automatically determines the number of SC-FDMA symbols per subframe.	normal
Allocation table		
Content type	UE can be set to PUSCH or PUCCH or PUACH	PUSCH, PUCCH, PUACH
Modulation	determines the modulation scheme used (if content type is PUSCH or PUACH) or the PUCCH format (if content type is PUCCH)	QPSK, 8PSK,16QAM or format 1, 1a, 1b, 2, 2a, 2b, 3
Number of resource blocks (RB)	defines size of selected allocation in terms of resource blocks	1 to 100
Offset VRB	sets the virtual resource block offset The physical resource block offset for the two slots of the corresponding subframe is set automatically depending on the frequency hopping setting.	0 to 99
Power	determines power of selected allocation	-80 dB to +10 dB in steps of 0.01 dB
State	sets state of selected allocation	on/off
User equipment configuration UE ID/n_RNTI	user equipment identifier (n_RNTI) for selected user equipment	0 to 65535
Power Mode	sets power level of selected UE	-80 dB to +10 dB in steps of 0.01 dB standard, PRACH
Data source	determines data source used for PUSCH or PUACH of selected UE	All0, All1, pattern, PNx and data list
Scrambling state	valid for both PUSCH and PUACH	on/off
Channel coding state	enables channel coding (FEC) and multiplexing of control and data information, valid for both PUSCH and PUACH	on/off
Channel coding mode PUSCH	selects whether data, control information or both is transmitted on the PUSCH	UL-SCH only, UCI + UL-SCH, UCI only
Channel coding mode PUACH		UL-SCH only
DRS power offset	sets power of DRS relative to power level of PUSCH/PUACH/PUCCH allocation of corresponding subframe	-80 dB to +10 dB in steps of 0.001 dB
SRS state	enables sending of sounding reference signals	on/off
Transmit trigger type 0 SRS	enables the transmission of SRS trigger type 0	
SRS power offset	sets power of SRS relative to power level of corresponding UE	-80 dB to +10 dB in steps of 0.001 dB
SRS cyclic shift	cyclic shift used for SRS	0 to 11
Configuration index I_SRS	SRS configuration index	0 to 636 for FDD
Bandwidth config. B_SRS	SRS bandwidth configuration	0 to 3
Transmission comb k_TC	SRS transmission comb SRS hopping bandwidth	0 to 1
		0 to 3
Hopping bandwidth b_hop		0 to 100
Hopping bandwidth b_hop Frequency domain position n_RRC	SRS frequency domain position	0 to 100
Hopping bandwidth b_hop Frequency domain position n_RRC Enhanced settings for PUSCH	SRS frequency domain position	
Hopping bandwidth b_hop Frequency domain position n_RRC Enhanced settings for PUSCH Cyclic shift field	SRS frequency domain position for DRS	0 to 7
Hopping bandwidth b_hop Frequency domain position n_RRC Enhanced settings for PUSCH	SRS frequency domain position	
Hopping bandwidth b_hop Frequency domain position n_RRC Enhanced settings for PUSCH Cyclic shift field	for DRS sets for layer 0 the part of the DMRS index which is part of the uplink	0 to 7

Enhanced settings for PUCCH		
n_PUCCH	sets PUCCH index	range depends on cell-specific settings
ACK/NACK pattern		0, 1
Number of CQI bits		1 to 13
Number of coded CQI bits		20
CQI pattern		0, 1
Enhanced settings for PUACH		
Cyclic shift field	for DRS	0 to 7
n(2)_DMRS,0	sets for layer 0 the part of the DMRS index which is part of the uplink scheduling assignment	0, 2, 3, 4, 6, 8, 9, 10
Transport block size UL-SCH		1 to 253440
Redundancy version index UL-SCH		0 to 3
Settings for PRACH		
Power ramping settings		
PRACH power ramping state		on/off
Transition time		0 μs to 30 μs in steps of 0.01 μs
Preamble format	set indirectly by PRACH configuration	0
RB offset ⁵	sets the start resource block used for the PRACH	0 to total number of RBs – 1
N_cs configuration ⁵		0 to 15
Logical root sequence index 5		0 to 837
Sequence index (v) ⁵		0 to 63
Δt ⁵	delays the corresponding PRACH by Δt in μs	–500 μs to +500 μs in steps of 0.01 μs
State ⁵	activates the PRACH for the corresponding subframe	on/off

-

⁵ Can be set individually for each subframe that is allowed to carry a PRACH in line with the selected PRACH configuration.

OneWeb reference signals (xxx-K355 option)

	block error rate 0.5 to 10 ⁻⁴		
Application	verification of internal BLER calculation in line with TS 25.141 (BS conformance testing)		
Add OCNS	simulation of orthogonal background and interfering channels of a base station in line with TS 25.101; the power of the OCNS channels is configured automatically so that the total power of the BS is 1		
Parameters	OCNS state	on/off	
	OCNS mode	standard, HSDPA, HSDPA 2	
Applications	testing the receiver of the mobile station ur measuring the maximum input level in line		
Additional user equipment	simulation of up to 128 mobile stations in a stations; the additional mobile stations use	ddition to the four user-configurable mobile different scrambling codes	
Parameters	number of additional mobile stations	1 to 128	
	scrambling code step	1 to FFFFFF (hex)	
	power offset	-80 dB to 0 dB	
Applications	base station tests under real receive condi	tions	
General settings			
Chip rate	standard	3.840 Mcps	
•	range	0.4 Mcps to 5 Mcps	
Link direction		uplink (reverse link) and downlink (forward link)	
Baseband filter	standard	$\sqrt{\cos}$, $\alpha = 0.22$	
	other filters	$\sqrt{_{\cos}}$, cos, user filters	
Clipping	setting of clipping value relative to highest peak in percent; clipping takes place prior to baseband filtering; clipping reduces the crest factor		
	modes	vector i + j q scalar i , q	
	clipping level	1 % to 100 %	
Code channels	downlink	up to 512 data channels (plus special channels) divided among up to four base stations (BS) of 128 code channels each	
	uplink	up to four user-configurable mobile stations (MS) and 128 additional MS of identical configuration in each of the following modes: PRACH only, PCPCH only, DPCCH + DPDCHs	
Power reference	for uplink only	RMS power, first DPCCH, PRACH message part, last PRACH preamble	
Parameters of every BS		· ·	
State		on/off	
Scrambling code		0 to 5FFF (hex)	
Second search code group		0 to 63	
Page indicators per frame		18, 36, 72, 144	
Time delay	The signals of the various base stations are delayed against each other.	0 chip to 38400 chip	
Diversity/MIMO	The antenna type can be selected according to different antenna configurations.	single antenna, antenna 1 of 2, antenna 2 of 2	
Open loop transmit diversity	The output signal can be generated according to an antenna configuration with or without open loop transmit diversity.	on/off

3GPP FDD enhanced MS/BS test including HSDPA (xxx-K243, xxx-K283 or R&S®CMW-KW401 option)

One xxx-K242 (R&S®CMW-KW400) option must be installed.

Note for R&S®SMW200A and R&S®SGT100A users: The R&S®xxx-K283 option includes 3GPP FDD enhanced MS/BS tests including HSDPA as well as 3GPP HSUPA and 3GPP HSPA+.

General parameters	This option extends the xxx-K242 (R&S®CMW-KW400) option (3GPP FDD digital standard) to HSDPA support.	
	Therefore, all general parameters of the xxx-K242 such as modulation are also valid to the xxx-K243, xxx-K283 or R&S®CMW-KW401 option.	
Downlink simulation		·
HSDPA channels (HS-SCCH, HS-PDSCH	and F-DPCH)	
Enhancements	The xxx-K242 (R&S®CMW-KW400) supports simulation of HSDPA/HSPA+ channels in a continuous mode needed for TX measurements in line with TS 25.141 (test models 5 and 6). The xxx-K243/xxx-K283 (R&S®CMW-KW401) now supports simulation of HS-SCCH (high speed shared control channel) and HS-PDSCH (high speed physical downlink shared channel) in line with TS 25.211. This implies the correct timing between these channels and the possibility to set start subframe and inter-TTI distance In addition, several F-DPCHs (fractional dedicated physical channel) can be generated	
Application	TX measurements on 3GPP FDD NodeBs	
	RX measurements on 3GPP FDD UE with	
Ranges	HSDPA mode	continuous, subframe 0 to subframe 4
(valid for HS-SCCH and HS-PDSCH with		(where first packet is sent), H-Set
QPSK or 16QAM modulation)	inter-TTI distance	1 to 16
ar or or row in modulation,	burst mode	on: DTX between two HS-PDSCH or
	burst mode	HS-SCCH packets
		off: transmission of dummy data between two HS-PDSCH or HS-SCCH packets
Ranges (valid for F-DPCH)	slot format	0
Fixed reference channel definition H-Set		
Enhancements	The xxx-K243/xxx-K283 (R&S®CMW-KW401) allows the generation of HSDPA downlink channels with channel coding in line with the definition of the fixed reference channels (H-Sets 1 to 6, H-Set 10, H-Set 12) in TS 25.101; in addition, a user-editable H-Set configuration is possible.	
Ranges	H-Set	H-Set 1 to H-Set 6, H-Set 10, H-Set 12, user-editable H-Set
	HS-SCCH type	type 1 (normal)
	data source	PRBS: 9, 11, 15, 16, 20, 21, 23, All0, All1, pattern (length: 1 bit to 64 bit) and data list
	UEID	0 to 65535
	number of HS-PDSCH channel codes	1 to 15
	total HS-PDSCH power	range depends on the number of HS-PDSCH channel codes
	HS-PDSCH modulation	QPSK, 16QAM
	UE supports 64QAM	on: The information signaled in the
	(only for 16QAM modulation)	HS-SCCH is provided under the assumption that the device under test basically supports 64QAM modulation. off: The information signaled in the HS-SCCH is provided under the assumption that the device under test
		does not support 64QAM modulation.
	transport block size table	O: The transport block size is evaluated in line with table 0 in TS 25.321, subclause 9.2.3.1. The transport block size is evaluated in line with table 1 in TS 25.321, subclause 9.2.3.1.
	transport block size index	0 to 62; index in line with TS 25.321, subclause 9.2.3.1.
	virtual IR buffer size (per HARQ process)	up to 304000 in steps of 800; the lower limit depends on the transport block size configuration
	number of HARQ processes per stream	1 to 8

Ranges (continued)	HARQ simulation mode	Constant ACK: Every transmitted
		HS-PDSCH packet contains new data.
		Constant NACK: Several retransmissions
		of the same data take place in the
		HS-PDSCH packets of the individual
		HARQ processes.
	redundancy version (only for HARQ	0 to 7
	simulation mode set to constant ACK)	
	redundancy version sequence (only for	sequence of a maximum of 30 entries in
	HARQ simulation mode set to constant	the range from 0 to 7; the number of
		entries also determines the number of
	NACK)	
		transmissions of the same data in the
		HS-PDSCH packets of the individual HARC
		processes before new data is transmitted
Uplink simulation		
HS-DPCCH (high speed dedicated physic	<u>,</u>	
Enhancements	The xxx-K242 (R&S®CMW-KW400) does	not support HSDPA for the uplink. The
	xxx-K243/xxx-K283 (R&S®CMW-KW401)	now allows the simulation of an
	HS-DPCCH (high speed dedicated physic	al control channel) in every UE.

3GPP FDD HSUPA (xxx-K245, xxx-K283 or R&S®CMW-KW402 option)

One xxx-K242 (R&S®CMW-KW400) option must be installed.

Note for R&S®SMW200A and R&S®SGT100A users: The xxx-K283 option includes 3GPP FDD enhanced MS/BS tests including HSDPA as well as 3GPP HSUPA and 3GPP HSPA+.

General parameters	This option extends the xxx-K242 (R&S®CMW-KW400) option (3GPP FDD digital standard) to HSUPA support. Therefore, all general parameters of the xxx-K242 such as modulation are also valid for the xxx-K245/xxx-K283 (R&S®CMW-KW402).	
Downlink simulation	as modulation are also valid for the XXX TV2	+0/xxx 11200 (1100 OWW 11W+02).
HSUPA channels (E-AGCH, E-RGCH, E-F	IICH/	
Enhancements	In downlink, the xxx-K245/xxx-K283 (R&S®CMW-KW402) supports simulation of the HSUPA control channels E-AGCH (E-DCH absolute grant channel), E-RGCH (E-DCH relative grant channel) and E-HICH (E-DCH hybrid ARQ indicator channel) in line with TS 25.211.	
Application		correct timing
Ranges (valid for E-RGCH and E-HICH)	RX measurements on 3GPP FDD UE with correct timing	
Ranges (valid for E-RGCH and E-HICH)	type of cell E-DCH TTI	serving cell, non-serving cell 2 ms, 10 ms

	xxx-K243 and xxx-K245 (R&S®CMW-KW401 and -KW402) options required	TS 34.121, table C.11.1.3, subtests 1 to 5
	xxx-K243, xxx-K245 and xxx-K259 (R&S®CMW-KW401, -KW402 and -KW403) options required	TS 34.121, table C.11.1.4, subtest 1

3GPP FDD HSPA+ (xxx-K259, xxx-K283 or R&S®CMW-KW403 option)

xxx-K259 (R&S®CMW-KW403) options: One xxx-K243 (R&S®CMW-KW401) option or xxx-K245 (R&S®CMW-KW402) option must be installed. The functionalities of the xxx-K259 (R&S®CMW-KW403) option depend on the availability of the xxx-K243 (R&S®CMW-KW401) and/or xxx-K245 (R&S®CMW-KW402) option.

Note for R&S®SMW200A and R&S®SGT100A users: The xxx-K283 option includes 3GPP FDD enhanced MS/BS tests including HSDPA as well as 3GPP HSUPA and 3GPP HSPA+.

R&S®SMW-K283/R&S®SGT-K283 option: as prerequisite at least one xxx-K242 option must be installed on the instrument.

This option extends the xxx-K243 (R&S®CMW-KW401) option (3GPP FDD enhanced BS/MS test including HSDPA) and/or the xxx-K245 (R&S®CMW-KW402) option (3GPP HSUPA) to support HSPA+ in downlink and uplink. The xxx-K243 (R&S®CMW-KW401) and xxx-K245 (R&S®CMW-KW402) options require the xxx-K242 (R&S®CMW-KW400) option (3GPP FDD digital standard). Therefore, all general parameters of the xxx-K242 (R&S®CMW-KW400) option such as modulation are also valid for the xxx-K259/xxx-K283 (R&S®CMW-KW403) option. All general parameters of the xxx-K243 and/or xxx-K245 (R&S®CMW-KW401 and/or R&S®CMW-KW402) option(s) such as the H-Set parameters or the FRC HARQ simulation parameters are also valid for the xxx-K259/xxx-K283 (R&S®CMW-KW403) option, unless stated otherwise in the sections below.		
(CPC): HS-SCCH-less operation (all instrume 01) option)	nts except R&S [®] SMW200A/R&S [®] SGT100A:	
The xxx-K243 (R&S®CMW-KW401) option H-Sets with HS-SCCH type 1 (in line with support HS-SCCH-less operation, the xxx-now enables simulation of H-Sets with HS	The xxx-K243 (R&S®CMW-KW401) option supports simulation of the HS-SCCH in H-Sets with HS-SCCH type 1 (in line with TS 25.212) only. In order for the instrument to support HS-SCCH-less operation, the xxx-K259/xxx-K283 (R&S®CMW-KW403) option now enables simulation of H-Sets with HS-SCCH type 2 (for H-Set 7 and user-editable	
H-Set	H-Set 1 to H-Set 12, user-editable H-Set; CPC (HS-SCCH-less operation) can be simulated by selecting H-Set 7 or the user- editable H-Set with appropriate settings

GSM/EDGE (xxx-K240 or R&S®CMW-KW200 option)

GSM/EDGE digital standard		in line with GSM standard	
Sequence length	sequence length entered in frames (60/13 ms ≈ 4.61 ms each), maximum length depending on ARB memory size		
Modes	unframed	generation of a signal without slot and frame structure and power ramping, with symbol rate and filtering in line with GSM standard; MSK or 8PSK EDGE modulation can be selected	
	framed (single)	configuration of a signal via frame structure (see frame structure below)	
	framed (double)	configuration of simple multiframe	
	application: simulation of modulation change in a slot versus time	scenarios involving the combination of two frames (frame structure see below); a repetition factor can be specified for each of the two frames	
Modulation		MSK, switchable to FSK with settable deviation for simulating frequency deviation errors 8PSK EDGE	
Symbol rate	standard	270.833 kHz	
•	range	400 Hz to 300 kHz	
Baseband filter	GSM, standard	Gaussian with B x T = 0.3	
	range	B x T = 0.15 to 2.5	
	EDGE, standard	Gaussian linearized (EDGE)	
Frame structure	rate and GPRS at the physical layer. Slo uplink and downlink. In the normal burst	Change between GSM and EDGE possible from slot to slot and frame to frame; half rate and GPRS at the physical layer. Slots 0 to 7 of the frames are user-defined for uplink and downlink. In the normal burst half-rate mode, the burst parameters can be defined independently for two users that alternate from frame to frame.	
	burst types	normal (full rate), normal (half rate), EDGE, synchronization, frequency correction (normal + compact), dummy, access,	
		all data (GSM), all data (EDGE)	
Burst rise/fall time	standard	in line with GSM power time template	
	selectable		
	ramp time	0.3 symbol to 4 symbol	
	ramp delay	-1.0 symbol to +1.0 symbol	
	rise delay fall delay	-9 symbol to +9 symbol-9 symbol to +9 symbol	
Settable slot attenuation	iali delay	0 dB to +60 dB, eight different levels simultaneously possible (full level and seven attenuated levels)	
Burst on/off ratio		> 100 dB	
Data sources	for characteristics of data sources, see "I/Q baseband generator" section		
	internal data sources	PRBS 9, 11, 15, 16, 20, 21, 23, All0, All1, pattern (length: 1 bit to 64 bit) and data list	
Training sequence	for normal burst (full rate), normal burst (half rate), EDGE burst for sync burst	TSC0 to TSC7, user TSC standard, CTS, compact, user	
Markers	for access burst	TS0 to TS2 convenient graphics editor for defining marker signals; in addition: frame, multiple frame; slot, multiple slot; pulse; pattern; on/off ratio	

EDGE Evolution (xxx-K241 or R&S®CMW-KW201 option)

One xxx-K240 (R&S®CMW-KW200) option must be installed.

General parameters	standard) to support EDGE Evolution (EDgeneral parameters of the xxx-K240 option	This option extends the xxx-K240 (R&S®CMW-KW200) option (GSM/EDGE digital standard) to support EDGE Evolution (EDGE+) including VAMOS. Therefore, all general parameters of the xxx-K240 option such as slot attenuation are also valid for the xxx-K241 (R&S®CMW-KW201) option.	
Symbol rate mode		normal symbol rate, higher symbol rate	
Sequence mode	unframed	normal symbol rate: MSK, AQPSK, 8PSK EDGE, 16QAM EDGE or 32QAM EDGE higher symbol rate: QPSK EDGE, 16QAM EDGE or 32QAM EDGE	
	framed (single)	configuration of a signal via frame structure (see frame structure below)	
	framed (double)	configuration of simple multiframe	
Modulation		normal symbol rate: MSK, FSK, AQPSK, 8PSK EDGE, 16QAM EDGE or 32QAM EDGE; higher symbol rate: QPSK EDGE, 16QAM EDGE or 32QAM EDGE	
Training sequence		set 1	
		set 2: normal (GMSK), normal (AQPSK)	
Symbol rate	standard	normal symbol rate: 270.833 kHz;	
		higher symbol rate: 325 kHz	
	range	400 Hz to 325 kHz	
Baseband filter	GSM, standard for normal symbol rate	Gaussian with $B \times T = 0.3$	
	range	$B \times T = 0.15 \text{ to } 2.5$	
	EDGE, standard for normal symbol rate	Gaussian linearized (EDGE)	
	EDGE+ for higher symbol rate	narrow pulse shape, wide pulse shape	
Frame structure	change possible from slot to slot and frame to frame	normal symbol rate: GSM, AQPSK, 8PSK EDGE, 16QAM EDGE, 32QAM EDGE higher symbol rate: QPSK EDGE, 16QAM EDGE, 32QAM EDGE	
	additional burst types for normal symbol rate	normal (AQPSK, full rate – full rate), normal (AQPSK, full rate – half rate), normal (AQPSK, half rate – half rate), normal (16QAM), normal (32QAM), all data (16QAM), all data (32QAM)	
	additional burst types for higher symbol rate	normal (QPSK), normal (16QAM), normal (32QAM), all data (QPSK), all data (16QAM), all data (32QAM)	

CDMA2000® incl. 1xEV-DV (xxx-K246 or R&S®CMW-KW800 option)

CDMA2000® digital standard	Release C	in line with 3GPP2 C.S0002-C
Sequence length	The sequence length of the ARB componen	
	The maximum length depends on chip rate,	
	With an oversampling of 2, the user has 5.3	
	Example: If an R&S®SMU-B10 with 64 Msar	mple memory is selected and an
21:	oversampling of 2 is applied, R&S®WinIQSI	-
Chip rates	standard	1.2288 MHz (1X)
Mode		1X direct spread (spreading rate 1)
ink direction		forward link and reverse link
Baseband filter	standard for reverse link	cdmaOne
	standard for forward link	cdmaOne + equalizer
	for enhanced ACLR	
	reverse link	cdmaOne 705 kHz
	forward link	cdmaOne 705 kHz + equalizer
Code channels	reverse link	four base stations with a maximum of
		78 code channels each (depending on
		radio configuration)
	forward link	four mobile stations with a maximum of
		eight code channels each (depending on
		radio configuration)
Clipping level	setting of a limit value relative to the	value range 1 % to 100 %
5	highest peak in percent; limitation is	5
	performed prior to baseband filtering and	
	reduces the crest factor	
Generation of waveform file		filtering of data generated in ARB mode
		and saving it as a waveform file
Parameters of every BS		J
State		on/off

TD-SCDMA (3GPP TDD LCR) (xxx-K250 or R&S®CMW-KW750 option)

WCDMA 3GPP TDD LCR digital standard (TD-SCDMA)	in line with 3GPP TDD standard for a chip ra	ate of 1.28 Mcps (low chip rate mode)
Signal generation modes/sequence length	Simulation of up to four TD-SCDMA cells with variable switching point of uplink and downlink. User-configurable channel table for each slot and simulation of the downlink and uplink pilot time slot. In uplink, a PRACH can also be generated. The sequence length can be entered in frames (10 ms each). With an oversampling of 2, the user has 40.96 frames/Msample. Example: If an R&S®SMU200A with 64 Msample memory is selected and an oversampling of 2 is applied, R&S®WinIQSIM2™ can generate 2621 frames.	
Modulation		QPSK, 8PSK
Generation of waveform file	filtering of data generated in ARB mode and	
	application	for multicarrier or multisegment scenarios
General settings		"10 L L L L L L L L L L L L L L L L L L L

Galileo satellite configuration		
Signals (chip rates)		E1 default (1.023 MHz), E5a/E5b, E6 (10.23 MHz)
Modulation		CBOC(6,1) for E1, QPSK for E5a/E5b, E6
State		on/off
Initial code phase	configurable in the absence of real navigation data	0 chip to 20459.99 chip in steps of 0.01 chip; precision error depends on configurable sample rate
Space vehicle ID		E1: 36 memory codes, 4092 chip each; E5a/E5b: 36 memory codes, 10230 chip each; E6: 36 memory codes, 5115 chip each
Doppler shift		-100 kHz to +100 kHz in steps of 0.01 Hz
Navigation data format		Galileo INAV for E1 and E5b, FNAV for E5a, All0, All1, pattern, PNx and data list for E6
Data rate		250 Hz for for E1 and E5b, 50 Hz for E5a, 1 kHz for E6
Number of ephemeris pages		1

GLONASS (xxx-K294 or R&S®CMW-/R&S®CMA-KW621 option)

GLONASS digital standard		in line with ICD-GLONASS version 5.0
General settings		
RF bands		L1/E1, L2, default: L1/E1
Simulation modes		
Static mode		generation of a GLONASS ARB satellite signal defined in time with user-definable initial code phase and Doppler, e.g. for sensitivity measurements; signal is continuously repeated on the machine
Configurable sample rate		as a multiple integer factor of the GLONASS coarse acquisition chip rate
Duration of satellite simulation		maximum simulation time depends on configurable sample rate, Doppler value, satellite frequency number and size of ARB memory available on the signal generator
System time basis		GLO, UTC, default: GLO
Simulation time		flexible date and time or GLO time configuration with 1 ms resolution
Current leap seconds		automated
UTC-UTC(SU)		allows the configuration of UTC-UTC(SU) phase shift and frequency drift
Marker		restart 1 PPS 1 PP2S 10 PPS pulse
		pattern
		on/off ratio
Navigation data source		Allo
		All1
		pattern (up to 64 bit) PN 9 to PN 23
		data lists real navigation data: almanac file as source for ephemeris and almanac subframes; ephemeris automatically generated from almanac file
Use of spreading code		on/off
GLONASS satellite configuration		1 4 1
Signals (chip rates)		coarse acquisition R-C/A (511 kHz)
Frequency number	configurable in the absence of real navigation data	-7 to +13
Modulation	Jan a same	BPSK (CDMA)
State		on/off
Initial code phase	configurable in the absence of real navigation data	0 chip to 20459.99 chip in steps of 0.01 chip; precision error depends on configurable sample rate
Space vehicle ID		1 CDMA code shared by all GLONASS satellites, 511 chip per repetition
Doppler shift		-100 kHz to +100 kHz in steps of 0.01 Hz
Navigation data format		GLONASS NAV
Data rate		50 Hz, 100 Hz (after applying the meander code)
Number of ephemeris pages		1

Modernized GPS (xxx-K298 or R&S®CMW-/R&S®CMA-KW620 option)

GPS digital standard		in line with ICD-GPS-200 revision J (L2C), IS-GPS-705E (L5)
General settings	•	
RF bands		L2 for L2C, L5, default: L2
Simulation modes		
Static mode		generation of a GPS ARB satellite signal defined in time with user-definable initial code phase and Doppler, e.g. for sensitivity measurements; signal is continuously repeated on the instrument
Configurable sample rate		as a multiple integer factor of the GPS signal chip rate
Duration of satellite simulation		maximum simulation time depends on configurable sample rate, Doppler value and size of ARB memory available on the signal generator
System time basis		GPS, UTC, default: GPS
Simulation time		flexible date and time or GPS time configuration with 1 ms resolution
Current leap seconds		automated
Marker		restart
		1 PPS
		1 PP2S
		10 PPS
		pulse
		pattern
		on/off ratio
Navigation data source		All0
ŭ		All1
		pattern (up to 64 bit)
		PN 9 to PN 23
		data lists
		real navigation data: almanac file as
		source for ephemeris and almanac subframes; ephemeris subframes are projected from the almanac subframes
Use of spreading code		on/off
GPS satellite configuration		
Signals (chip rates)		L2C (1.023 MHz), L5 (10.23 MHz)
Modulation		BPSK for L2C, QPSK for L5
State		on/off
Initial code phase	configurable in the absence of real navigation data	0 chip to 20459.99 chip in steps of 0.01 chip; precision error depends on configurable sample rate
Space vehicle ID		37 L2 CM-/L2 CL codes
Doppler shift		-100 kHz to +100 kHz in steps of 0.01 Hz
Navigation data format		GPS CNAV
Data rate		50 Hz for L2C, 100 Hz for L5
Number of ephemeris pages		1

BeiDou (xxx-K407 or R&S®CMW-KW623 option)

BeiDou digital standard General settings RF bands Simulation modes Static mode		generation of a BeiDou ARB satellite signal defined in time with user-definable initial code phase and Doppler, e.g. for sensitivity measurements; signal is continuously repeated on the machine as a multiple integer factor of the BeiDou
Simulation modes Static mode		generation of a BeiDou ARB satellite signal defined in time with user-definable initial code phase and Doppler, e.g. for sensitivity measurements; signal is continuously repeated on the machine
Static mode		signal defined in time with user-definable initial code phase and Doppler, e.g. for sensitivity measurements; signal is continuously repeated on the machine
		signal defined in time with user-definable initial code phase and Doppler, e.g. for sensitivity measurements; signal is continuously repeated on the machine
Configurable sample rate		B1I/B2I chip rate
Duration of satellite simulation		maximum simulation time depends on configurable sample rate, Doppler value and size of ARB memory available on the signal generator
System time basis		BDT, UTC, default: BDT
Simulation time		flexible date and time or BDT time configuration with a resolution of 1 ms
Current leap seconds		automated

Initial code phase	configurable in the absence of real navigation data	0 chips to 20459.99 chips in steps of 0.01 chips
Space vehicle ID		1 to 14 1023 chips each
Doppler shift		-100 kHz to +100 kHz in steps of 0.01 Hz
Navigation data format		IRNSS master frame
Data rate		50 Hz
Number of ephemeris pages		1

IEEE 802.11 (a/b/g) (xxx-K248 option)

IEEE 802.11a/b/g digital standard	in line with IEEE 802.11a-1999, IEE	E 802.11b-1999, IEEE 802.11g-2003	
General settings			
Modes	unframed	generation of a non-packet-oriented signal without frame structure, with modulation	
		modes and data rates as defined by the IEEE 802.11 standard	
	framed	generation of a sequence of data packets with the frame structure defined by the	
Coguenes length	1 frame to ever 1004 frames (denon	standard, interrupted by an idle time	
Sequence length	destination instrument)	,	
	PSDU data length of 1024 byte, the	me of 0.1 ms, OFDM 801.11g, 54 Mbps and a	
		64 Msample memory is selected and the above	
	values are applied, R&S®WinIQSIM2	2™ can generate 6078 frames.	
Marker modes		restart, frame start, frame active part, pulse, pattern, on/off ratio	
Parameters in framed mode			
Idle time	time between two successive packe	,	
	range	0 s to 10000 μs	
Clipping		vector or scalar clipping, applied before filtering	
MAC header		activating and configuring the MAC header with the following parameters: frame control, duration/ID, addresses 1 to 4 and sequence control	
Frame check sequence		activating or deactivating a 32 bit (4 byte) checksum for protecting MAC header and user data (frame body)	
Settings for CCK (IEEE 802.11b/IEEE	802.11g)		
Chip rate	standard	11 Mcps	
Baseband filter		spectral mask in line with IEEE 802.11b-1999 wireless LAN MAC and PHY specifications – chapter 18.4.7.3	
Parameters in framed mode			
PLCP preamble and header format		long PLCP and short PLCP	
PSDU bit rate		1 Mbps, 2 Mbps, 5.5 Mbps, 11 Mbps	
PSDU modulation	depending on PSDU bit rate	DBPSK, DQPSK, CCK	
PSDU data length	length of user data field in bytes of the	he packet to be transferred	
	range	0 byte to 4095 byte	
Scrambling		data scrambling can be activated or deactivated	
Parameters in unframed mode			
PSDU bit rate		1 Mbps, 2 Mbps, 5.5 Mbps, 11 Mbps	
PSDU modulation	depending on PSDU bit rate	DBPSK, DQPSK, CCK	
Scrambling		data scrambling can be activated or deactivated	
Settings for OFDM (IEEE 802.11a/IEE	E 802.11g)		
Kernel sample rate	standard	20 Msample/s	
Baseband filter		spectral mask in line with IEEE 802.11b-1999 wireless LAN MAC and PHY specifications –	
		chapter 17.3.9.6.2	

Version 15.00, September 2020

Parameters in framed mode		
PLCP preamble and header format		long PLCP and short PLCP
PLCP signal field		automatically calculated
PSDU bit rate		6 Mbps, 9 Mbps, 12 Mbps, 18 Mbps, 24 Mbps, 36 Mbps, 48 Mbps, 54 Mbps
PSDU modulation	depending on PSDU bit rate	BPSK, QPSK, 16QAM, 64QAM
PSDU data length	length of user data field in bytes of the pack	et to be transferred
	range	0 byte to 4095 byte
Number of data symbols	number of OFDM symbols in data portion of packet	0 byte to 100000 byte
Scrambling		data scrambling can be activated or deactivated; initial scrambler state can be set randomly or to a user-defined value
Interleaver		can be activated or deactivated
Time domain windowing	transition times	0 s to 1000 ns
Service field		user-defined service field value supported
Parameters in unframed mode		
PSDU bit rate		6 Mbps, 9 Mbps, 12 Mbps, 18 Mbps, 24 Mbps, 36 Mbps, 48 Mbps, 54 Mbps
PSDU modulation	depending on PSDU bit rate	BPSK, QPSK, 16QAM, 64QAM
PSDU data length	length of user data field in bytes of the packet to be transferred	
	range	0 byte to 2312 byte
Number of data symbols	number of OFDM symbols to be generated	directly proportional to PSDU data length
Scrambling		data scrambling can be activated or deactivated; initial scrambler state can be set randomly or to a user-defined value
Interleaver		can be activated or deactivated
Time domain windowing	transition times	0 s to 1000 ns
Settings for PBCC (IEEE 802.11b/IEEE 8	B02.11g)	
Chip rate	standard	11 Mcps
Baseband filter		spectral mask in line with IEEE 802.11b-1999 wireless LAN MAC and PHY specifications – chapter 18.4.7.3
Parameters in framed mode	<u>'</u>	
PLCP preamble and header format		long PLCP and short PLCP
PSDU bit rate		1 Mbps, 2 Mbps, 5.5 Mbps, 11 Mbps, 22 Mbps
PSDU modulation	depending on PSDU bit rate	DBPSK, DQPSK, PBCC
PSDU data length	length of user data field in bytes of the pack	
	range	0 byte to 4095 byte
Scrambling		data scrambling can be activated or deactivated
Parameters in unframed mode		
PSDU bit rate		1 Mbps, 2 Mbps, 5.5 Mbps, 11 Mbps, 22 Mbps
PSDU modulation	depending on PSDU bit rate	DBPSK, DQPSK, PBCC
Scrambling		data scrambling can be activated or deactivated

IEEE 802.11a/b/g/n/j/p (xxx-K254 or R&S®CMW-KW650 option)

IEEE 802.11a/b/g/n/j/p digital standard		in line with IEEE 802.11-2012
General settings		111 1110 Will 1222 002.11 2012
Bandwidth		20 MHz, 40 MHz
Clipping		vector or scalar clipping, applied before
		filtering
Generate waveform file	filtering of data generated in ARB mode	
Marker modes		restart, frame block, frame, frame active part, pulse, pattern, on/off ratio
Triggering		see data sheet of respective
riiggeiiiig		Rohde & Schwarz instrument,
		"I/Q baseband generator" section
Chip/sample rate	standard	11 Mcps, 10 Msample/s, 20 Msample/s,
Omp/sample rate	Staridard	40 Msample/s
	range	depending on Rohde & Schwarz
		instrument
Baseband filter		spectral mask in line with
		IEEE 802.11-2012, chapter 18.3.9.3 for
		LEGACY 10 MHz and 20 MHz modes,
		IEEE 802.11-2012, chapter 20.3.20.1 for
		high throughput (HT) modes
	CCK and PBCC	spectral mask in line with
		IEEE 802.11-2012, chapter 17.4.7.4
Transmit antenna setup	number of antennas	1 to 4
	mapping coefficient range	(-1000 -1000 i) to (+1000 +1000 i) with
		resolution = 0.01/dimension
Frame block configuration		
Frame blocks (table rows)		limited to 100; the wave-file size is
		checked at the beginning of the
		computation process to make sure that
		sufficient ARB memory is available
Туре		DATA, SOUNDING
Physical mode	type = DATA	LEGACY, MIXED MODE, GREEN FIELD
	type = SOUNDING	GREEN FIELD, MIXED MODE
Transmit mode	physical mode = LEGACY	L-10 MHz, L-20 MHz, L-Duplicate, L-
		Upper, L-Lower,
		CCK, PBCC
	physical mode = MIXED MODE or	HT-20 MHz, HT-40 MHz, HT-Duplicate,
_	GREEN FIELD	HT-Upper, HT-Lower
Frames		1 frame to 20000 frames (depending on frame duration)
Idle time	time between two successive frames (PPDUs)	
ICIE UITIE	,	0 ms to 1000 ms with 1 µs resolution
	range	o ma to root ma with r ps resolution

Settings for CCK		
PSDU parameters	MAC header	activating and configuring the MAC header with the following parameters: frame control, duration/ID, addresses 1 to 4, sequence control
	frame check sequence	activating or deactivating a 32 bit (4 byte) checksum for protecting MAC header and user data (frame body)
	PLCP preamble and header format	long PLCP and short PLCP
	preamble/header active	The preamble/header can be turned on or off. By turning it off and setting idle time to 0, the 'unframed' mode is available.
	PSDU bit rate	1 Mbps, 2 Mbps, 5.5 Mbps, 11 Mbps
	PSDU modulation (depending on PSDU bit rate)	DBPSK, DQPSK, CCK
	PSDU data length (length of user data field	d in bytes of the packet to be transferred)
	range	0 byte to 4095 byte
	scrambling	data scrambling can be activated or deactivated
Settings for PBCC		
PSDU parameters	MAC header	activating and configuring the MAC header with the following parameters: frame control, duration/ID, addresses 1 to 4, sequence control
	frame check sequence	activating or deactivating a 32 bit (4 byte) checksum for protecting MAC header and user data (frame body)
	PLCP preamble and header format	long PLCP and short PLCP
	preamble/header active	The preamble/header can be turned on or off. By turning it off and setting idle time to 0, the 'unframed' mode is available.
	PSDU bit rate	1 Mbps, 2 Mbps, 5.5 Mbps, 11 Mbps, 22 Mbps
	PSDU modulation (depending on PSDU bit rate)	DBPSK, DQPSK, PBCC
	PSDU data length (length of user data field in bytes of the packet to be transferred)	
	range	0 byte to 4095 byte

Settings for OFDM		
PSDU parameters	MAC header	activating and configuring the MAC header with the following parameters: frame control, duration/ID, addresses 1 to 4, sequence control For high throughput (HT), i.e. 'Not Legacy', QoS Control and HT Control are also configurable.
	frame check sequence	activating or deactivating a 32 bit (4 byte) checksum for protecting MAC header and user data (frame body)
	number of spatial streams	1 to 4
	number of space-time streams	1 to 4
	number of extended spatial streams	0 to 3
	space-time block coding	activated by simply choosing different values for number of spatial and spacetime streams
	PSDU modulation/space stream	BPSK, QPSK, 16QAM, 64QAM
	data length	1 byte to 4061 byte ⁶ for LEGACY frames, 1 byte to 65495 byte for HT frames; 0 is permissible only with sounding frames
	number of data symbols (number of OFDM symbols in data portion of packet)	directly proportional to PSDU data length
	raw data rate	up to 600 Mbps
	preamble/header active	The preamble/header can be turned on or off. By turning it off and setting idle time to 0, the 'unframed' mode is available.
	guard interval	short, long
	scrambling	data scrambling can be activated or deactivated; initial scrambler state can be set randomly or to a user-defined value
	coding	convolutional coding (BCC) or off, 1 or 2 encoders based on setup and coding rates of 1/2, 2/3, 3/4 and 5/6
	interleaver	can be activated or deactivated
	time domain windowing (transition times)	0 s to 1000 ns
	service field	user-defined service field value supported
	spatial mapping	off, direct, indirect and spatial expansion

⁶ The maximum PPDU length for legacy is 4095 byte. It can be obtained by activating all the MAC fields. The same applies to HT; 65535 byte can be implemented.

IEEE 802.11ac (xxx-K286 or R&S®CMW-KW656 option)

One xxx-K254 (R&S®CMW-KW650) option must be installed.

General parameters	option. Therefore, all general parameters	02.11ac modes. 6) requires the xxx-K254 (R&S®CMW-KW650) of the xxx-K254 (R&S®CMW-KW650) option DU parameters are also valid for the xxx-K286
IEEE 802.11ac digital standard		in line with: IEEE P802.11ac/D1.2
General settings		
Bandwidth	depending on used Rohde & Schwarz instrument	20 MHz, 40 MHz, 80 MHz, 160 MHz
Sample rate	standard	20 Msample/s, 40 Msample/s, 80 Msample/s, 160 Msample/s
	range	depending on Rohde & Schwarz instrument
Baseband filter		spectral mask in line with IEEE P802.11ac/D1.2, chapter 22.3.18, for very high throughput (VHT) modes
Transmit antenna setup	number of antennas	1 to 8
Frame block configuration		
Transmit mode	physical mode = MIXED MODE	VHT-20 MHz, VHT-40 MHz, VHT-80 MHz, VHT-80+80 MHz, VHT-160 MHz
Settings for OFDM		
PSDU parameters	multi-user MIMO	With a minimum of 2 spatial streams configured, multi-user MIMO can be activated. N STS and group ID can be set individually for each of the 4 available users.
	MAC header	activating and configuring the MAC header with the following parameters: frame control, duration/ID, addresses 1 to 4, sequence control For very high throughput (VHT), QoS Control and VHT Control are also configurable.
	number of spatial streams	1 to 8
	number of space-time streams	1 to 8
	PSDU modulation/space stream	BPSK, QPSK, 16QAM, 64QAM, 256QAM
	data length	0 byte to 65495 byte for VHT frames
	raw data rate	up to 6933.33 Mbps

IEEE 802.11ax (xxx-K442 or R&S®CMW-KW657 option)

One xxx-K254 (R&S®CMW-KW650) option must be installed.

eneral parameters This option enhances the xxx-K254 (R&S®CMW-KW657) o 802.11a/b/g/n/j/p) to support IEEE 802.11ax modes. The xxx-K442 (R&S®CMW-KW657) option requires the xxx option (IEEE 802.11a/b/g/n/j/p). Therefore, all general para		lax modes. In requires the xxx-K254 (R&S®CMW-KW650)
		ne block configuration or PSDU parameters are (W657) option, unless stated otherwise below.
IEEE 802.11ax digital standard		in line with IEEE P802.11ax/D1.0
General settings		
Bandwidth	depending on used Rohde & Schwarz instrument	20 MHz, 40 MHz, 80 MHz, 160 MHz
Sample rate	standard	20 Msample/s, 40 Msample/s, 80 Msample/s, 160 Msample/s
	range	depends on the respective Rohde & Schwarz instrument
Baseband filter		spectral mask in line with IEEE P802.11ax/D1.0, chapter 28.3.18, for high efficienty (HE) modes
Transmit antenna setup	number of antennas	1 to 8

Generate waveform file	filtering of data generated in ARB mode	
Marker modes		restart, frame, frame active part, frame
		inactive part, pulse, pattern, on/off ratio
Triggering		see data sheet of R&S®SMW,
		"I/Q baseband generator" section.
Chip/sample rate	standard	1.76 GHz for control, single carrier
	range	400 Hz to 3 GHz
Baseband filter		spectral mask in line with:
		IEEE 802.11ad-2012, chapter 21.3.2
Clipping		vector or scalar clipping, applied before
		filtering
Sequence length (frames)		1 frame to 20000 frames
		(depends on frame duration)
Idle time	time between two successive frames (P	PPDUs)
	range	0 s to 10 ms with 0.1 µs resolution
PPDU parameters	MAC header	activating and configuring the MAC header
		with the following parameters: frame
		control, duration/ID, addresses 1 to 4,
		sequence control, QoS control
	frame check sequence	activating or deactivating a 32 bit (4 byte)
		checksum for protecting MAC header and
		user data (frame body)
	preamble/header active	the preamble/header can be turned on or
		off
Settings for PHY mode single carrie	r	
MCS	Modulation and coding scheme	1 to 12
Modulation		$\pi/2$ -BPSK, $\pi/2$ -QPSK, $\pi/2$ -16QAM
Channel coding		LDPC
Code rate		1/2, 3/4, 5/8, 13/16
Scrambler		on/off
Scrambler init		00 to 7F
Data length		1 to 262107 bytes
Training length		0 to 16
Turnaround		on/off
Last RSSI		-68 dBm to -42 dBm
Settings for PHY mode control		
MCS	Modulation and coding scheme	0
Modulation		DBPSK
Channel coding		LDPC
Code rate		3/4
Scrambler		on/off
Scrambler init		00 to 7F (hex)
Data length		14 to 987 bytes
Training length		0 to 16
Turnaround		on/off

IEEE 802.16 WiMAX™ including 802.16e (xxx-K249 option)

IEEE 802.16 digital standard	in line with IEEE 802.16 Rev. 2	
Link direction		forward link and reverse link
Physical layer modes		OFDM, OFDMA, OFDMA/WiBro
Duplexing		TDD, FDD
Frame durations		2 ms, 2.5 ms, 4 ms, 5 ms, 8 ms, 10 ms, 12.5 ms, 20 ms, continuous, user
Sequence length (frames)	1 to over 2000 (depending on frame duration, sample rate and available ARB memory) With an oversampling of 2 and a frame duration of 10 ms, the user has 26.21 frames/Msample. Example: If an R&S®SMU-B10 with 64 Msample memory is selected and an oversampling of 2 and a frame duration of 10 ms are applied, R&S®WinIQSIM2™ can generate 1677 frames.	
Predefined frames	in OFDM mode	short, mid and long test messages for BPSK, QPSK, 16QAM and 64QAM modulation
	in OFDMA mode	predefined setups for all bandwidths and modulations specified in MRCT 1.0.0, appendix 2
Level reference	in OFDM mode	FCH/burst or preamble
	in OFDMA/WiBro mode	preamble or subframe RMS power
Parameters in OFDM mode		
Predefined frequency bands		ETSI, MMDS, WCS, U-NII, user
Channel bandwidth		1.25 MHz to 30 MHz, depending on selected frequency band
Sampling rate		1.5 MHz to 32 MHz, depending on channel bandwidth
Tg/Tb settings		1/4, 1/8, 1/16, 1/32
FFT size		256 (fixed)
Frame preamble		long, short, off
Modulation and RS-CC rates		BPSK 1/2, QPSK 1/2, QPSK 3/4, 16QAM 1/2, 16QAM 3/4, 64QAM 2/3, 64QAM 3/4
Subchannelization (number of possible channels)		1, 2, 4, 8, 16 (all)
Number of bursts with different modulation formats per frame		64
Burst types		data, DL-MAP, UL-MAP, ranging
Data		All0, All1, pattern (length: 1 bit to 64 bit), PNx and data list
Midamble repetition	in uplink mode	off, 5, 9, 17

Version 15.00, September 2020

Parameters in OFDMA mode	
Predefined frequency bands	ETSI, MMDS, WCS, U-NII, WiBro, user
Channel bandwidth	1.25 MHz to 30 MHz, depending on
	selected frequency band
Sampling rate	1.5 MHz to 32 MHz, depending on
	channel bandwidth
Tg/Tb settings	1/4, 1/8, 1/16, 1/32
FFT size	128, 512, 1024, 2048
Preamble modes	auto and user with index 0 to 113
Number of zones/segments	8
Space-time coding modes	off, two antennas: matrix A or B, four
	antennas: matrix A, B or C, collaborative
	spatial multiplexing, CSTD
Modulation and coding rates	QPSK 1/2, QPSK 3/4, 16QAM 1/2,
	16QAM 3/4, 64QAM 1/2, 64QAM 2/3,
	64QAM 3/4, 64QAM 5/6
Channel coding modes	off, CC, CTC
Channel coding parts	scrambler, FEC and interleaver can be
	switched on/off independently
Repetition coding	0, 2, 4, 6
Subcarrier permutation	FUSC, PUSC, AMC2×3, sounding
Subchannel map	user-definable for PUSC
Subchannel rotation	on/off (for uplink PUSC)
Dedicated pilots	on/off (for downlink PUSC and AMC2×3)
Number of bursts with different	64 per zone
modulation formats	
Burst types	FCH, DL-MAP, UL-MAP, DCD, UCD,
	SUB-DL-UL-MAP, HARQ, ranging, fast
	feedback, data
Data	All0, All1, pattern (length: 1 bit to 64 bit),
	PNx and data list

Service that adds value

- Local und personalized Customized and flexible Uncompromising quality Long-term dependability

Rohde & Schwarz

The Rohde & Schwarz electronics group offers innovative solutions in the following business fields: test and measurement, broadcast and media, secure communications, cybersecurity, monitoring and network testing. Founded more than 80 years ago, the independent company which is headquartered in Munich, Germany, has an extensive sales and service network with locations in more than 70 countries.
