Heat Dissipation:

- The passive heat dissipating system of this lectern is sufficient for up to approximately 800 BTU's of internal heat. Anything higher may require a forced air system.
- If a forced air system is anticipated, a rack mounted intake fan can be installed directly behind the instructor-side vented door panel to draw air into the rack space.
- The two 3.25" wire management grommet caps in the base panel can also be removed to increase airflow.
