INTRODUCTION

The SEM206P & SEM206TC are cost effective “smart” in head transmitters that accept Pt100 or thermocouple temperature sensor inputs and converts them to an output over a configured range to a standard industrial 4 to 20 mA transmission signal.

PC configuration allows the user to select Pt100 on SEM206P or Thermocouple Type on SEM206TC, Range, Units, and Burnout direction, without requiring calibration equipment. Configuration is performed quickly using our new USB port driven configurator by simply connecting two leads to the SEM206P or SEM206TC loop terminals and following the instructions from our free software. Calibration set up may be saved as a file on the PC for later use.

The SEM206 in head transmitters incorporates the latest digital technology to ensure accurate drift free performance.

If required, the desired range can be specified at the time of order, removing the need for configuration in the field. If the range is not specified then the SEM206P transmitter will be shipped with the default range of 0 to 100°C and the SEM206TC will be shipped with the default range of 0 to 1,000°C for Type “K” thermocouple.
