

VoiceLink I wireless classroom microphone system

The VoiceLink I system will expand your multi-media sound system to include voice reinforcement via an infrared wireless microphone. The VoiceLink I is a preamp receiver and is designed to be plugged into the input of a multi-media sound system.

The ESSENTIAL classroom sound-field system

An infrared transmitter/microphone transmits the voice clearly heard through the room with ease. The Auxiliary input on the front panel allows the output of a computer, DVD or iPod to supplement the instructional program.

The voice is a teacher's most powerful teaching tool, but it also needs to be protected. The VoiceLink Plus system allows the teacher to speak more comfortably and be heard more precisely, no matter where the teacher is located.

TeachLogic has developed infrared technology to a very high level that guarantees constant connectivity. Our microphone capsules ensure that you can achieve the maximum amount of gain before feedback, while maintaining a very natural reproduction of the presenter's voice.

Sapphire
(IRT-55)
Microphone Transmitter

The Sapphire's light weight, small size, and optimum performance make it the ideal infrared microphone to complete any of our infrared classroom system packages.
