Wera ESD Tools

High protection

For Halfmoon and HIOS Bits

Kraftform Micro ESD bit holder

The requirements for ESD-safe screwdrivers are specified in the European standard DIN EN 61340-5-1. This standard also includes a handle that has to be out of a defined conductive material. The Wera products in the ESD series satisfy these standards and the even more stringent requirements demanded by some technology companies.

The electric surface resistance of the Wera ESD material is  $\leq 10^9$  ohm. This securely protects components against electrostatic energy and associated damage.

Features a combination bitholder for both bits with Halfmoon and bits with HIOS drive.

Kraftform Micro handle

The precision zone

The power zone

Rotating cap and fast-turning zone

Multi-component screwdriver handle for ergonomic working.

The precision zone directly above the blade gives the user a better feel for the right rotation angle during fine adjustment work.

The power zone has integrated soft zones near the blade tip to ensure high torque transfer for loosening or tightening screws without losing contact with the screw.

The fast-turning zone just below the rotating cap allow rapid twisting. This makes time-consuming grip adjustments as with other conventional precision screwdrivers unnecessary.
