

## Real Time Language Translation

Williams AV is making inclusion easier for all with the new Language Translation System, Convey. Through the power of AI, Convey has the ability to translate up to 27+ languages and more than 70 dialects.

Listening is more than just hearing someone, it is about understanding them as well. And sometimes, understanding simply must come from communicating in the same language. With that in mind, Williams Sound is reinventing the art of listening with the introduction of the new Convey room translator. Convey was designed to enable integrators to easily add translation technology to an audio system design.

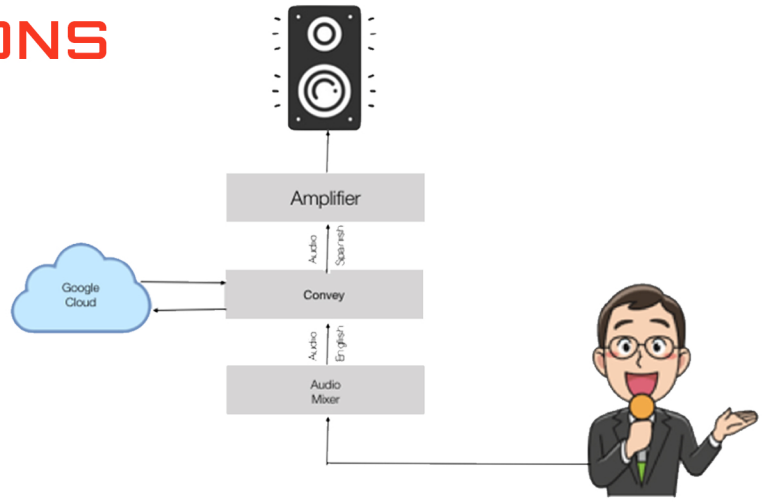

### FEATURES:

- Real-time translation
- 27+ available languages and >70 dialects
- Translation can be heard over a listening system
- Billing handled directly on app using the Google Play or Apple App Store on any iOS and Android device
