LB-38 and LB-9 Lightboxes

For WolfVision Visualizers
and Cameras

WolfVision Lightboxes LB-9 and LB-38 have an attractive and professional appearance due to their very slim design.

They are specially designed for dark transparent material like x-rays, color separatings or oversized slides, to be picked up in perfect quality with WolfVision Visualizers or other document cameras. They guarantee a maximum on gray scale and true colors.

Please note that in general a lightbox is NOT necessary for transparencies, since they can be picked up in perfect quality on the crystalline white working surface of all WolfVision Visualizers. However, there are some rare situations where a lightbox is also useful for transparencies: When the room light causes reflections, if transparencies are very wavy or extremely dark.

Technical data

	LB-38	LB-9
Size of lit area (length x width)	430 x 359 mm (16.9" x 14.1")	300 x 210 mm (11.8" x 8.3")
Size on outside (length x width)	503 x 419 mm (19.8" x 16.5")	370 x 260 mm (14.6" x 10.2")
